Doctors are now concentrated where hospitals are available. Having spent thousands of dollars to educate and train themselves, doctors are unwilling to practice where they do not have hospital facilities, where they do not have the tools with which to do their work.

I remember when I was a boy in knee pants, my father could carry most of the equipment a doctor of those days needed in one of those small, black handbags. Today, with the marvelous progress in medicine, the doctor must have access to X-ray equipment, laboratory equipment, sterilizing equipment, anaesthetic equipment. They're not gadgets to him. They are to the doctor what a tractor, a cultivator, an electric pump are to the farmer. They make it possible for the doctor to increase the services he can provide society.

During the war we learned an expensive and impressive lesson about how the health of individual people is related directly to the strength of the Nation in time of emergency. One man out of every three called up for military service was found unfit to serve because of physical or mental disability. The same percentage—one out of every three—applied to women who sought to serve with the Women's Army Corps.

If half of the men who were rejected for service for these disabilities had been qualified to serve, it would never have been necessary to call up fathers, or men over 35.

Those who are handicapped for service during war are also handicapped for service during peace. Physical or mental defects take their toll in lowered production, and early death.

How can the Nation remain unconcerned about the toll that poor health is taking from our human resources?

Let me ask how many of you come from counties which today have adequate hospital facilities and public health facilities.

Suppose you have to depend on your local resources; that is, private organizations, church groups, county and State governments, and private charity. Do you think that in the next 5 years you could get adequate hospital facilities without Federal aid?

Based on the conviction that it would be impossible for areas which need them most to provide adequate hospital services without some help from the Federal Government, Senator Burton, now Justice Burton, and I joined in sponsoring the hospital construction bill. Under this bill direct grants would be made to assist States, counties, and communities to provide needed public and private nonprofit hospitals and medical centers. The amount of money for any particular State would depend on that State's present income. I am happy to report to you that we were able to pass the bill in the Senate last Tuesday. It is now in the Committee on Interstate Commerce of the House of Representatives. This legislation has the backing of the American Hospital Association, the Catholic Hospital Association, the Protestant Hospital Association, and the Council on Medical Education and Hospitals of the American Medical Association. Only if it is favorably reported by the committee and passed by the House of Representatives is there any hope for adequate hospitals in the areas which most need them.

The health and lives of the farm people of the Nation demand the passage of the legislation. The health and lives of all the people of the Nation demand the passage of the legislation.

We also have had a dramatic example of how essential education is in the modern war. We were able to develop the atomic bomb because of the level of education in America. You have undoubtedly been impressed with the fact that atomic energy had its beginnings in the laboratories of our colleges. Dr. Albert Einstein, a professor of mathematics, laid the groundwork for atomic energy a quarter of a century ago. Mathematicians, physicists, chemists—those who teach and those who have been exploring the frontiers of science—made it possible to take those formulas and to devise this machine of destruction—a machine which we now believe can also be an engine for construction.

But education does not begin in the laboratories of our great institutions of higher learning. It is based on the whole structure. The foundation is in thousands of grammar schools and high schools.

If the whole structure is to be sound, there is much to be done.

It is already late. Education takes time. The investment in the first grade of grammar school today does not pay dividends in citizenship until the boy or girl reaches maturity—14 or 15 years from now. We must have a greater urgency in our determination to provide adequate, universal public education.

We have a desperate need in many sections for more and better education, for more and better school buildings, for more and better paid school teachers.

The average salary of rural school teachers is not even half the average salary of city teachers. I can show you charwomen and janitors cleaning public buildings who receive more pay than the average salaries of the Nation's rural school teachers.

In some places we find good school buildings but the children are being taught by poorly paid and untrained teachers. A child has no choice over where he or she is born. Yet this often determines the opportunity he or she will have in life.

California pays her school teachers an average annual salary of $2,497.

Indiana pays her school teachers an average annual salary of $1,606.

Alabama pays her school teachers an average annual salary of $925.

The low pay of Alabama teachers is not due to lack of interest in education in Alabama. Alabama's problem, like that of many other States, especially farming States, is low income.

Yet the Nation during the war depended upon men and women who were raised in our rural areas. Likewise, the Nation is dependent for its future upon boys and girls who are in America's rural schoolrooms today. The intelligence of these boys and girls in peacetime jobs for the future, and in defense for the future will determine the strength and well-being of the Nation.

The farmers send millions of their dollars out of the rural sections each normal, peacetime year into other sections for the purchase of automobiles, farm machinery, fertilizer, clothing, and manufactured goods and commodities of all kinds. The rural sections cannot tax the profits from these millions of their farmers' dollars. The only way the rural sections can get back some of these farmers' dollars so badly needed for schools and the education of the farmers' children is by the Federal Government collecting some of these farmers' dollars in taxes and sending the dollars back to the farm sections through Federal aid for education.

Considering America's income and what we are capable of providing, how many of you feel that in your communities or counties you have adequate school plants, adequate salaries for teachers, and adequate school terms?

Suppose your community or county has to depend on local or State resources, do you think that within 5 years from that date you can have adequate educational facilities?

How many of you here believe that there is any reason why a rural child in America should not have an educational opportunity equal to a city child?

Knowing it will not be possible to provide for better educational opportunity in the areas which need it most without Federal grants, Senator THOMAS of Utah and I are sponsoring a bill which would make such grants directly to the States. The amounts to go to each State are based on their present per capita incomes and the effort they are now making to provide educational opportunity for their children.

This bill offers the one hope to speed up rural education—the one opportunity to make it possible for farm boys and girls to have an educational opportunity more nearly equal to that of city boys and girls. Without Federal aid there can be no such opportunity.

Many war veterans are returning home more determined than ever to complete their education. Their experiences with learning rapidly to do jobs in the Army and Navy mean that they have high standards in what they expect. The Federal Government has made it possible for these men and women, as individuals, to continue their education. But this is of little value if the high schools, trade schools, and colleges open to them are low in quality. Either these veterans will become discouraged and drop out of school or they will move off to other schools where the standards are higher.

It is simple justice that children should not be handicapped because of something over which they have no control. The three out of ten children who live on America's farms must not be handicapped because their families receive only one dollar out of ten of America's income.

I would like to remind you that Federal aid for education is not a new thing. There is Federal aid provided for our land-grant colleges and other institutions. There is

Federal aid for the agricultural extension service, and its farm educational services. There is Federal aid for agricultural and home economics courses in our high schools.

Those who raise the cry that Federal aid means Federal control forget that we have had experience with Federal aid for education over a period of half a century.

These programs I have outlined to you are a parity program. A parity of educational and health opportunities for rural people. Such parity is essential, not only in the interest of farm people but in the interest of the Nation.

The United States now is in a position of world leadership. It is a responsibility that we cannot escape or hide from. It is an opportunity that no other people in history have had.

But that responsibility and that opportunity have made education a national necessity. We cannot build a new world unless it is based on knowledge and understanding. The way of peace is not easy. The United States, along with other peace-loving nations, is committed to a bold, new attempt at international security and peace through the United Nations Organization. How many people understand fully what this means? How many will be alert to give our representatives to the United Nations Organization the support and confidence they need?

I have heard those who say, "It's too much for me to understand. Let our leaders in Washington decide those things."

Your leaders in Washington to make wise decisions must know what you and millions of Americans think and believe.

Americans of the future must be educated and prepared to think clearly. They must have the capacity to understand other peoples and other nations. As others look to us for leadership, so we must look to them for cooperation at every step.

Now that all the world is at our own backyard, American education must become a dynamic force—a force that helps us look inward as well as outward. A force that will make it possible for us to avoid staring at the mote in our brother's eye while we cannot see the beam in our own eye.

We have at this moment our opportunity to lead mankind forward and upward over a new frontier and into a new era. We failed to grasp such an opportunity at the end of the last World War. Destiny has now blessed us by giving us a second chance. It may be the last. We cannot count on a third.

---

## Low-Cost Housing: A Challenge to the Building Industry—Under Secretary of Commerce Delivers Constructive Address to Builders of New York on Problem of Great Current Interest

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. PATMAN. Mr. Speaker, under permission previously granted to me, I beg leave to include in the RECORD a copy of an address made by the Honorable Alfred Schindler, Under Secretary of Commerce, before the Building Industry Employers of New York State at the golden jubilee dinner of that organization at the De Witt Clinton Hotel in Albany, N. Y., on December 12, 1945.

Mr. Schindler's address is on the subject Low-Cost Housing: A Challenge to the Building Industry. The full text of his address is as follows:

I appreciate the opportunity of addressing you this evening. There is an important reason for this. As one of the public administrators of the Department of Commerce I'm deeply concerned with the progress of the building industry in these critical days of reconversion. I also am deeply concerned with what I believe your industry can do and must do in helping shape the prosperity of the country in the years ahead.

We are all aware of a great, Nation-wide deferred demand for construction of all kinds. Our farmers are in need of construction; industry is in need of construction; trade and service businesses are in need of construction; all branches of Government, down to the smallest township, are in need of construction. But the most critical part of this deferred demand for construction is in housing. This demand is growing more acute with each passing day. It is being constantly swelled by the number of veterans who are returning to civilian life. These veterans need living quarters. War-industry centers are bulging with people who apparently intend to stay put and who therefore need decent living quarters—not trailers and makeshift barracks.

Now all of this construction demand, especially the demand for housing, is geared into almost every industry in the country. These feeder industries are the whole run of consumer durable goods. Together, they add up to employment for some four and a half million workers. Next to agriculture, construction is the largest industry in the country. In a 40-hour week the construction industry, together with its feeder industries, can produce better than 10 percent of our total national production.

Thus, the health and well-being of your industry is of the greatest concern to the Nation as a whole. Should your industry be afflicted by a fatal disease—and I make no bones about it when I tell you that the disease I have in mind is inflation—and I am talking to you as one businessman to another—should your industry become bedridden with inflation through blind greed for only fat or swollen profits, then it will have succeeded in sickening our entire economy. If people cannot buy what you build because of high or inflated costs, then the boom now before the building industry will collapse after a brief period just as sure as fate.

The building industry historically has always been able to market houses to that one-fifth of our population which can afford to pay high prices. But it has not served adequately or wisely the other four-fifths of our population. Three-fifths could pay just reasonable prices for dwellings. The remaining one-fifth are in dire need of subsidized housing. But together, these four-fifths of our population represent a tremendous, untapped, and continuing market.

It is to this market that the building industry must turn. Not only to meet the urgent housing needs of this overwhelming portion of our population, but because if their demands for housing are not met—if they are neglected—then the prosperity which should so richly grace our land will evaporate. The four and a half million jobs which the building industry could supply toward our national goal of "maximum gainful" employment will not materialize. And the building industry, every phase and facet of it, will be in a terrible mess.

As a businessman I know that you builders want to build houses that people can afford to buy. It makes good business sense, because you sell more houses that way. But the reason you haven't been able to make houses cheaper and sell them cheaper is because you have tangled with and become surrounded by a lot of obstacles—some of them of your own choosing. These obstacles can correctly be labeled "cost obstacles." And while they stand high in the path of your industry's progress—high in the path of full profitable production and full gainful employment for the American people, they are not immovable. They must not be immovable. They are obstacles that can be cleared away only by the most honest thinking, the clearest understanding, and the boldest action that can be collectively given to the task. I say "collectively" because they involve realtors, the building industry, labor, and government down to the smallest town council.

These obstacles, as we in the Department of Commerce see them after careful study, can be enumerated as follows:

1. The lack of effective price control on land values, on construction, and on finished houses.

2. The lack of year-round work and an assured basic annual wage for the workers in the industry.

3. The oppressive and restrictive practices now being carried on by some construction industry suppliers, and the restrictive agreements between management and labor in the construction field.

4. The continuance by most of our municipalities of antiquated building codes, which restrict the use of new and cheaper materials and in many other ways add to the cost of construction.

The removal of these obstacles is the No. 1 job facing the industry today. For we are going to have houses built that more of our people can afford to buy, despite the selfish interests of those who have chained their present mental attitudes to unrealistic past performances. The public will not wait impatiently forever.

I want to discuss one by one the points I've enumerated. The first is price control. You gentlemen know what happens when inflation hits the housing industry. You saw it happen after the First World War, and again in the late 1920's. You know what symptoms identify this disease. The prices of land and of new and old structures rise rapidly. This encourages the fly-by-night speculator to dabble in the building game. He jumps in, puts up a few cheap structures, and takes out a fancy profit. In so doing he further bids up land values and the cost of materials. This makes it just so much tougher for the legitimate builder to operate. Banks and other credit sources see the bubble grow, and knowing that it has to burst, they withdraw from the building field—and the industry is soon in a serious and costly depression.

The responsible and legitimate businessmen in the building industry should champion and support needed price-control legislation. Legislation which should remain in effect until the dangers necessitating it have safely passed.

They should likewise support such additional legislation as has already been introduced and as may be contemplated, designed to avoid serious immediate pitfalls—to establish stability in the industry and to assure its continued growth and progress and needed contribution to the general welfare and soundness of the economy as a whole.

Legislation such as has been suggested in the bill introduced by Congressman WRIGHT PATMAN, of Texas, which authorizes the President to appoint a housing coordinator who would be in a position to mobilize the whole economy behind the housing industry. He could expedite the production of building materials and he could channel them into that type of construction and housing where the need and the market is greatest. He could set ceilings on new houses. These ceilings would take into consideration present material costs, labor costs, and an ample margin of profit.

He would also have the authority to apply ceilings to future sales of existing houses. He could take strong action to see that speculative excesses in land did not hinder construction activity.

He could put his weight behind the drive for new homes in the areas where the situation was most urgent. He would have the over-all power necessary to cut red tape and get things done.

This is a direct and forthright approach to help lick the housing shortage—to make the volume of production of houses possible and to help assure the production of houses that more of our people can afford to buy.

Quite obviously, such a coordinator would have to work most closely with all elements involved and secure their best help and cooperation in developing a proper plan of procedure and support in its full and successful implementation. Thus, a most serious cost obstacle to the wholesome progress of the industry can be removed.

Now I come to the second point I previously made—the lack of year-round work and an assured basic annual wage for the workers in the industry. This cost obstacle is not an artificial one. Unlike booming land values and speculative profits, this problem cannot be solved by legislation. But it can be solved by wisely appreciating the demand for housing as well as by the application of some good hard thinking—ingenuity, and sound, common, business sense. In an industry which must now strive to give more consumers housing they can afford to buy, the present high hourly wages paid to the mechanics and laborers of the building trades are helping hamstring this goal.

Labor is not at fault in demanding this high hourly rate of pay. The fault lies with the industry itself. When you consider that the building trades workers are employed on an average of only 32 weeks out of the year, then whatever they demand for hourly pay must include remuneration for the 20 other weeks the industry cannot give them work.

I want to take this occasion to correct a mistaken impression that many people have about the wages of building trades workers. There is widespread belief that these workers make big money because of the high hourly rate of pay they receive. On the contrary, a building trades worker's income is less than that which his fellow-worker makes in a manufacturing plant. The average annual income received by the building trades worker prior to the war was less than $1,400. During the war it crept up to over $2,000. But this increase was largely the result of overtime paid during the rush to get munitions plants built and other needed construction built in the speediest possible time.

Now nobody can argue against the fact that "a laborer is worthy of his hire." Building trades workers are skilled mechanics and should be paid well for their work. I believe they would be willing to take less pay per hour if they had better assurance of year round work and an annual basic wage permitting the decent standard of living to which they are entitled.

A true measure of income is not a man's hourly wage but his annual income and it's this annual income that determines his standard of living.

An assured basic annual wage would go far toward bringing down building costs and helping stabilize the industry. There are many ways this objective can be reached. One method is by combining as cooperatives, so that facilities can be exchanged and sheds built where prefabrication of some parts of a structure can be carried on at all times. Another method is by making year-round work possible by "tenting" the job, when weather necessitates. In this age of tremendous scientific advancement there should be no reason why construction of all kinds, especially that of houses, cannot be carried on in all kinds of weather. During cold weather these tents can be heated. In this manner, shoring and concrete work could be carried on. The original carpenter or bricklaying work can be carried on under this kind of tenting. And when the roof is completed the tent can be taken down. Windows can then be boarded up and in cold weather the interior of the house can be heated so that the plaster work, the plumbing, the electrical work or the rest of the carpenter work can be carried on without stoppage.

Paradoxically, an assured annual wage in the building industry not only would mean lower construction costs, and thus more sales of houses, but at the same time it would mean more jobs and higher annual wages for the workers. Thus, the cost obstacle of seasonal high hourly wages is a challenge to the growth and prosperity of the building industry. It is a challenge to the industry's ingenuity and engineering ability. It is a challenge that can and must be met. It is a cost obstacle that can and must be removed if we are to build houses whose costs are within the means of more of our people.

Yes, there are many who say this cannot be done. There are many who say some time in the future we may find a way to do it. Leaders, aggressive and wise, however, will find a way to do it now and thus reap for themselves the fruits of their leadership.

The third cost obstacle I made reference to earlier is the oppressive and restrictive practices now being carried on by industry, management, and labor in the construction field. These practices are illegal in many respects, and harmful to the industry in the over-all. They are also militating against the years of full profitable production and full gainful employment that can lie ahead for us.

One of the worst practices—a practice that has been under the scrutiny of the Department of Justice and the Federal Trade Commission—is the retailer-enforced agreement against building manufacturers. In this type of agreement, some building supplies retailers boycott a building materials manufacturer if he should sell supplies to a volume builder or contractor direct. Thus, where a volume builder or contractor could lower the cost of construction by a considerable amount of money, he is blocked in his efforts. Although the Federal Trade Commission has leveled several cease-and-desist orders on such retailer groups, reports indicate that this practice is still being carried on sub rosa. Plumbers also make agreements whereby they refuse to install the plumbing unless the plumber is permitted to furnish his own material. The same is true of electricians and other contractors or subcontractors. All these practices are in restraint of trade. Restraint of trade means restraint of employment—not free enterprise.

Freedom of individual enterprise means freedom of competition—not license to destroy competition or to establish monopoly. All these practices are helping to keep the cost of housing beyond the reach of the average American family. They can be stopped at once through the cooperation of builders' associations like yours with the Federal Government.

With regard to the restrictive agreements between management and labor and suppliers in the construction industry—these restrictive agreements exist in most large cities. They usually exist between building associations and local labor unions. Sometimes they exist between local unions themselves. These agreements cause more hours of labor to be spent upon a particular installation than are necessary by the furthest stretch of the imagination. Since these agreements are city-wide, every builder has relatively the same additional costs that his competitor has—costs that are usually passed on to the purchase price of a house, or to the building owner.

These make-work affairs, these outgrowths of the depression years when construction labor was in large part walking the streets and very understandably sought to protect itself by limitation of work agreements, have no right to existence in these days. They are no more productive of full employment than are the restrictive provisions of cartels and other monopolistic understandings. During the war these agreements were waived because there was plenty of work. There is more than plenty of work in the years of full production that lie ahead. If these agreements are not abrogated at once they will do more harm to building labor than good. If they are not discarded it will be because of unfortunate short-sightedness.

Let me cite some examples of these agreements. In some cities, glass put in a window sash by a manufacturer must be taken out by a builder and the window reglazed by a member of a local glazing union. The same treatment is usually accorded factory-wired electrical fixtures. The wires must be taken out and then put back by a member of the local electrical union. Paint spray guns and similar labor-saving devices are a favorite taboo with unions. In some instances, where a 5- or 6-inch paint brush is practical, no wider than a 4-inch brush is permitted. Jurisdictional disputes are all too frequently settled by dividing work. A member of one union sets the beam while the rival attends the setting. There is no end to a list of this kind.

Now, no single restrictive agreement such as I have drawn your attention to, exists on a Nation-wide scale, and no single employer-union agreement amounts to much in a specific instance. But when these restrictions are all added up, the aggregate is very costly. Both industry and labor must take immediate steps to cancel out these agreements, these cost obstacles to lower-cost housing. The solution should be found in the assurance of plenty of work, in full production and full employment.

The last cost obstacle I want to expound on is building codes—codes which restrict the use of new and less costly materials, new methods of construction, and which deny the development of technological progress in the building field. It must be recognized that building codes by their very nature are restrictive, and that their purpose is to protect the public from dangerous practices. But it must also be recognized that many codes, through long usage, have acquired a kind of sanctity although they are out-of-date, and, in a good many instances, just plain ridiculous. Take the example, of the code of one of our large Midwest cities. In this instance the code is so worded as to prohibit the use of a certain type of fireproof wallboard. Yet this product, manufactured in about 30 plants throughout the United States, is of standard quality, and has wide acceptance. It has been tested and approved by our National Bureau of Standards. The quantity used per million dollars' worth of construction has more than trebled in the last decade. Hundreds of million feet were used by our armed forces. But the home owners and builders of this large city are deprived of its use and of the economy of its use.

In another city the code requires the thickness of brick walls to be 12 inches for dwellings, when 8-inch walls are generally accepted in most other cities. Thus, an unnecessary cost is added to the purchase price of new homes in that city.

In still another city the code is written so that there is a dependence on minimum dimensions, rather than on safe working stresses. For example, this code requires 2 x 4 studs without permitting construction of equivalent strength but of different dimensions, such as in glued panels.

Then there is the code in another large city which requires that the first floor of a dwelling be constructed to withstand a live load of 50 pounds per square foot, when most other cities have found 40 pounds per square foot to be more than reasonably safe.

These are not isolated examples. But they all add up to the reason why the skeletal structure of a house is so unduly costly. What is needed is a national building code which every city and community can adopt, perhaps with minor local variations. Starting with the wartime experience with a national building code for defense housing, the Department of Commerce is exploring the possibilities of further action in this direction.

The mechanics of change in codes are unduly cumbersome. But the area of technical dispute in most codes is relatively small. There is no need for the codes of certain cities to go beyond the safe standards established by the National Bureau of Standards, or beyond the limits established in the codes of comparable cities. This does not imply the building of "jerry" structures. The standards established by the National Bureau of Standards is a guaranty against that. The correction and modernization of codes is a "must." Horse-and-buggy-day codes represent an entirely unnecessary and burdensome cost obstacle in the path of low-cost housing.

The building industry will not find itself alone in fighting for the removal of any cost obstacle. The Department of Commerce now has a new construction division which was organized for the sole purpose of assisting any and every phase of your business. This division will concern itself with the promotion of year-round construction, the removal of restrictive clauses in the building codes, and the removal of costly management-labor restrictive agreements. In short, it will concern itself with helping the building industry to achieve the fullest production possible.

Our construction division will also furnish you with statistical and research information, as well as information on material production. The free-enterprise system can work best when business has knowledge of the facts and is able to make its plans on the basis of facts.

Incidentally, our figures show that the production of materials is on the upswing, and even taking into account a normal amount of work stoppages due to strikes and bad weather, we should just about skim through the early spring. We think that by summer the present scarce materials such as lumber, brick, gypsum lathe, sheet steel, and soil pipe will be in reasonably fair supply, although inventories and a completely rounded line of these materials may not be available until fall. We must recognize that this coming spring will be for the building industry a rather trying period. But no builder should be gloomy or discouraged. By early fall materials should be available to meet all building demands.

When the materials picture is normal again the building industry should be all set to go. Beginning now, every day should be used to prepare for what is coming. Never before has the building industry had so great and challenging an opportunity of fitting our mass-production skill and techniques toward the problem of satisfying the housing needs of all our people. As businessmen you must consider the full extent of your market. The vast majority of our citizens have low annual incomes. They are the backbone of our country. They are the greatest potential mass market in this country for housing, and their housing need is the most pressing problem facing the country today.

There is neither magic nor mystery in the production of low-cost housing. No builder can afford to sit back and wait for some startling new mechanical invention to reduce the cost of construction. You cannot cure a chronic disease with a headache powder. The problem must be tackled at its source. Fight to get rid of the obstacles in the way of lower construction costs. That must be the first objective, to which everything else is secondary.

The building industry should take the initiative in lowering construction costs. As businessmen, any other role would be a costly error. Now is the time for the industry to take a page out of the history of other industries—and build in the interest of the consumer at a price the consumer can afford to pay. This not only makes good business sense, but it is the only method by which our country will achieve full profitable production and full gainful employment. This is a challenge the building industry must face with boldness and vision, with considered action and with concerted action. In this direction lies the progress that can be ours if we will it so.

## The Snow

EXTENSION OF REMARKS
OF
### HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle:

Hast thou entered into the treasures of the snow?—Job 38: 22.

THE SNOW

From the sunless scenes above,
Gentle as the voice of love,
To the earth below—
Like a crystalline veneer—
Through the silent atmosphere,
Comes the quiet snow,
Hiding e'en earth's humbler things
'Neath the whiteness of her wings.

And, as comes the quiet snow—
Fresh from heaven's overflow—
Silently and odd,
To us throughout all our days,
In a million mindful ways,
Comes the care of God—
Comes His tender, loving care
For His creatures everywhere.

When the sunshine comes again,
Over mountain, glade, and glen,
Noiselessly the snow
Melts her silent self to tears
As she, weeping, disappears
From the earth below;
But the love the Father sends
Never melts, and never ends.

—*Horace C. Carlisle.*

## Labor Protects Veterans' Jobs

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include a letter from an enlisted man in the United States Navy which was published in the magazine of the United Automobile Workers, Ammunition.

I insert this letter to call to the attention of Members of Congress that there is a strong feeling among the men in service that their rights as workers when they return to civilian life are being protected by organized labor. The thinking veteran wants to return to a United States in which he will find a spirit of cooperation among all groups that go to make up our great citizenry.

This is not the first letter of this kind that I have seen. Within the past 2 weeks I had a very interesting letter from one of our fighting men in Japan. Let me quote what this American soldier, Sgt. Frank R. Reidelberger, of Venice, Ill., who fought his way with the Eighty-first Infantry Division through the bloody island hopping in the Pacific to the very shores of Japan, had to say:

We had quite a discussion last evening about labor and capital, and I assure you that most of us know that labor is going to be our friend when we return.

The letter which appeared in Ammunition follows:

SIR: Enclosed you will find $1 for a subscription to Ammunition.

I would like to add my voice to that of many other liberal friends of labor. I appreciate the great fight the CIO is putting up not only on behalf of labor itself but also for the common man in every walk of life.

In the future I not only intend to back labor but also to join veterans' organizations and let my voice be heard. An alliance between organized labor and the veterans is a necessity if we are to continue a liberal advance.

WILLIAM THUMMA,
*AOM 3/c, Ordnance Department,*
*Box 11, NAAS, Chincoteague, Va.*

## Men and Officers

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. VOORHIS of California. Mr. Speaker, unless certain things are changed one of the strongest bodies of opinion against conscription or compulsory military service in peacetime will come from those men who have served during the present war and particularly those who have served since the end of the fighting. The reason for their attitude is simple and single—the undemocratic character of both the Army and Navy and the tremendous gulf that separates officers from men.

There are, of course, many, many cases where officers have displayed that rare ability to secure discipline by means of true qualities of leadership and have caused the men to want to follow them and to feel that in so doing they were acting as free self-respecting men. But the vast majority of expressions of opinion from servicemen—especially since the war ended—has been in forthright denunciation of officers' privileges and what they term some officers' arrogance. There is far too much smoke not to indicate a very substantial fire. Universally the men recognize that in time of active warfare there has to be

authority and discipline and that it must be exercised by officers. But their complaints refer not to orders given in battle but to the relationship between officers and men at other times, such as the present.

Now one argument advanced for peacetime military conscription of all young men has been that we had to do it on account of America's international commitments. This is an argument that I am quite unable to follow. For surely no one is suggesting that we are going to send these 18-year-old boys that would be drafted under such a system off to Africa or the Middle East or the Far East or anywhere else. Therefore all the problems of fulfilling international commitments must be met by members of the Regular Military Establishments. And men for such service must be obtained by the traditional volunteer method of our country.

Therefore the real danger to enabling the United States to carry out its international commitments is to be found in anything which blocks or discourages voluntary enlistments. And the main thing that does so is the failure of this Nation so far to accord to a noncommissioned man in the armed services the honor and dignity which is his due. Congress is partly at fault. The pay, in my opinion, is still not what it should be. The enlisted man who, naturally enough, wants to marry and have a family is, in peacetime, most inadequately provided for. There is the immediate patent injustice whereby officers receive pay at the time of discharge for accumulated leave not taken whereas the men do not. Bills to correct this have been introduced. They ought to be passed. In fact all these things ought to be corrected by legislation and at once.

But such measures will not be enough. There has to be a new truly democratic spirit in the armed forces and the barrier of distinction between officers and men, though it cannot be completely broken down of course, has got to be in certain important respects removed.

There are many reports about this matter, with which others will be as familiar as I. Some of them outrage a man's sense of fair play. There is the one about the general who forbade any of his men flying a particularly dangerous course to have parachutes though his own plane was well equipped with them. There is the letter which I received from an enlisted man anxious to come home who wrote that all the officers at a camp on Leyte had long since departed for home while the men still waited for transportation. Again I quote from a letter recently received from a man serving in the Army in Japan:

> Another thing: Many of us have souvenirs captured from the Japs. When we arrived in Korea we were told to turn them in so that they could be fairly apportioned to the men as they went home. Well that was not so bad although some of us had risked high points to get those souvenirs. But the next day a general came by to inspect them and generously gave some of them to his friends and took some more for other friends. Apparently the general had over 50 friends. Just to make sure that we could not slip them away from him our mailing privilege was restricted. We are not allowed to mail packages until they have been inspected by a special officer. War trophies are among the many things which are confiscated.

Enlisted men, especially in the Navy, tell about the tremendous amount of time that they must spend running errands and performing personal services for officers in matters which at best have no connection whatsoever with the running of the Navy and at worst are destructive of self-respect and sometimes even degrading. Somehow or other the standards observed by the best officers (most of whom the men report are Regular officers) have got to be made the standards of the rest. And the key to it is that a sailor or a soldier in the United States Navy or Army is a man and an American citizen and according to every standard set up by this Nation exactly as good, as a man, as any officer above him.

One incident was brought to my attention concerning an enlisted man in the United States Navy stationed on one of the islands in the Pacific.

In the case of this particular serviceman who was doing plumbing work in the Navy, he had written a letter to his family stating that he had been at his present location for only a short time and was then completing hot showers for the use of officers while the enlisted men on the same island were still in pup tents and bathing in their helmets. The man who censored this letter brought it to the executive officer of the battalion who thereupon called the writer of the letter to his desk. The officer proceeded to explain to the enlisted man that he was not allowed to write to people in the States and explain the type of work he was doing and added also that "officers come from better families than enlisted men and are entitled to such things." This in reference to the hot showers which were provided for the officers and not for the enlisted men.

Unfortunately this is no isolated instance. And it illustrates the very point of the existing caste system which breeds resentment in the rank and file of the men of the armed services.

An editorial in the Washington Post on November 13 raises far more serious issues than any yet spoken of. No one will be so naive as to expect that there will be universal restraint among servicemen. But it is another matter to try to contemplate with equanimity the sort of moral and health conditions apparently existing among naval personnel in Japan. The Post editorial is based on a letter from a Navy chaplain, now in service in Japan and in position to know whereof he speaks. I shall not repeat the details related in the Post editorial nor its direct quotations from Lieutenant Lacour. But along with its attack on the Navy's policy of permitting sailors free access to houses of prostitution in Japan the Post states that for officers special places are provided. "Even in vice," remarks the Post "the sacred naval caste system is preserved."

I am not suggesting a break-down of discipline. I am suggesting a building up of morale. In any military organization men have to obey the commands of officers. But I have found no objection to that on the part of the men so long as the commands have something to do with the efficiency of the service or the welfare of the personnel, or the welfare of the Nation. The objections come when the orders given have only the purpose of serving the personal convenience or even indulgence of an officer.

Moreover, I see no reason for any difference in quality or quantity of food between officers' and men's messes .I can see no reason for differences in the quality of uniforms. And I am certain that along the line of creating a fairer, more democratic spirit in our armed forces lies the greatest hope of encouraging the voluntary enlistments in the Regular Army and Navy which is the only means of discharging international commitments by the United States of America.

## Commodore John Barry

EXTENSION OF REMARKS

OF

### HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I offer for the RECORD a fitting tribute, in verse, to the memory of Commodore John Barry, one of the outstanding heroes of the American Revolution and of the early history of the United States, the bicentennial of whose birth year is now being observed throughout the Nation. The author of these lines is James Patrick McGovern, a captain in our Army during World War I, whose widely read Poems of World War II were published last spring by Bethesda-Chevy Chase Post, No. 105, of the American Legion, Department of Maryland, of which he is a member.

BICENTENNIAL

Gallant Barry's immemorial name
Lives in his feats and needs not such acclaim
As "Father of the Navy." Washington,
Barry, Jones, Morris, Nicholson,
And others fought in ship or planned in hall
For our first naval glory. The later call
Against the pride of Algiers and of France
Saw Barry's post from seventh to first advance.
This captain, when new frigates hoisted sail—
Senior to Captains Barney, Truxtun, Dale,—
So ably trod his quarterdeck at sea
His ships emblazoned his famed mastery.
His *Lexington* drove Britons from their lair
Along blockaded shores of the Delaware;
His *Raleigh* with her shattered masts fought on
And won the beach when other hope was gone.
In the *Alliance* shone his forthright art.
His brillant seamanship, his dauntless heart;
Last, the *United States* as his command
Stamped him one of our Navy's foremost band.

—*James Patrick McGovern.*

## Our Soil and the National Fertilizer Bill

EXTENSION OF REMARKS
OF

**HON. LISTER HILL**
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

*Thursday, December 20 (legislative day of Wednesday, December 19), 1945*

Mr. HILL. Mr. President, on Tuesday last, December 18, at Chicago, Ill., I addressed the annual convention of the American Farm Bureau Federation on the subject Our Soil and the National Fertilizer Bill. I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful for this opportunity to be here with you at your annual convention where you are planning your programs for the coming year and exchanging with each other the benefits of your experience as leaders of farmers.

Yesterday I had an opportunity to talk to the Associated Women of the American Farm Bureau Federation. I told them that I welcomed the opportunity to talk about three fundamental things:

The Nation's health.

The education of the Nation's children.

The preservation of the Nation's soil.

These are fundamentals. They are resources with which we cannot afford to gamble.

In respect to medical care, the Associated Women are aware, as I know you are, of the crisis which the rural areas of the Nation face as the number of doctors for each 1,000 people continues to drop. Four out of ten counties in the Nation, most of them rural counties, have no recognized hospital whatever. Among the remainder, most of the rural counties especially do not have anything like adequate health facilities.

In war, we know that physical and mental defects eliminated one-third of all the men called up for service. These same handicaps lower peacetime efficiency, result in hardship for millions of families, and lead to unnecessary sorrow and misery. With the support of the American Hospital Association, the Protestant Hospital Association, the Catholic Hospital Association, and the Council on Medical Education and Hospitals of the American Medical Association, Senator Burton, now Justice Burton of the Supreme Court, joined with me in sponsoring the hospital construction bill. I am glad to tell you that we passed the bill in the Senate last Tuesday. It is now under consideration in the House. Its passage is the only hope for speeding the day when the rural families of the Nation can enjoy parity in hospital and public health facilities.

We know also that whatever the opportunities or the dangers that may face the American people in the future they can best be met by an enlightened, educated people. But 3 out of every 10 school children are being raised in farm homes which have only 1 out of every 10 dollars of the Nation's income. In short, as it has been put, "America's children are where the dollars ain't."

How long must we wait before children in farm areas have a parity of educational opportunity with city children? Children do not decide where they will be born, or the income of their parents. Yet where they are born, and the income of their parents, determine in large measure the opportunity they will have in life.

More than 150 years ago Thomas Jefferson laid down the principle that universal, public education of a high standard was essential in a democracy. We have made much progress in that direction, but anyone who stops to consider the low standard of teacher salaries, the short length of school terms, the overcrowded schoolrooms, and the lack of school equipment—especially in the Nation's rural areas—knows how much remains to be done.

For more than 70 years the Nation has recognized some responsibility for Federal aid to education. You know what Federal aid has meant to agriculture through our land-grant colleges, through the extension services, through grants for vocational and home-econon ics classes in high schools. This experience, together with the urgent need for a higher standard of education in grammar and high schools, led to the writing of the Federal aid for education bill. Senator THOMAS of Utah and I are joint sponsors of this bill. There is hope for its passage in the increasing awareness of America's educational needs.

The Nation's health and the Nation's children—these represent investments that cannot be neglected if America is to be able to make the most of its opportunities and to shoulder its responsibilities.

But it is of another fundamental resource that I want to speak to you today—America's soil.

Shortly those of you in this audience will be placing your orders for fertilizer during the coming year. Let's consider for a moment what happens.

You'll select a formula such as 3–12–12, or perhaps 6–8–4. It's a formula based on the same knowledge available 20, or perhaps 25 years ago. That is, it's like buying a 1925 model automobile.

In each 100-pound sack you order there will be some 80 pounds of inert matter. Inert matter is a fancy name for something your soil doesn't really need. Apt as not this inert matter is sand, or dirt; part of it is chemical byproducts that have not plant food value. The formula also includes some elements which may be needed on some soils, but not yours.

In short, if you bought your groceries in this same way, a loaf of bread would be mostly sawdust, such as Mussolini used to provide for the people of Italy.

Who pays the bill for this sand, sulfates, chlorides, fillers of various sorts, and other elements you don't need?

Certainly the manufacturer who mixed the fertilizer doesn't give you the sand and other elements which have no plant food value. Certainly the railroads and trucking companies do not haul this inert matter free. They charge the same rate for hauling sand in fertilizer sacks as they charge for hauling the potash, phosphorous, and nitrates.

Maybe you do not mind paying the estimated $4.80 for each 600 pounds which you have to pay for sand and other elements you don't need. Maybe you're unusual for a farmer and can afford this extra money. But what about the labor it takes to handle and spread it?

If today's fertilizers were mixed on formulas based on present scientific knowledge, at least one-half of the inert matter would be eliminated. That is, you would get the same plant food, which is after all the only reason for fertilizing, with half the inert matter you're now buying. We have scientific proof that formulas such as 4–16–16, and even 5–20–20, can be used.

But the tragedy is not alone that present fertilizer production and present fertilizing practices are as out of date as a 1925 automobile. The greater tragedy is that we are removing about twice as much plant food from our soil through cropping, erosion, and leeching as we are returning through fertilizers and soil-building crops. Even the richest man will soon face bankruptcy if he draws out of the bank twice as much every year as he puts in. This is what is happening to our basic natural resource, the soil—we're facing soil bankruptcy.

What can be done to halt this trend?

Your Farm Bureau Federation has prepared a fertilizer program based on scientific facts and proven experience. The key to this program is the national fertilizer bill. Senator BANKHEAD and I are cosponsors of that bill in the Senate. Representative FLANNAGAN is its sponsor in the House of Representatives.

I have confidence in this bill because your organization has given it all-out support.

I have confidence because it is based on the scientific experiments of the agricultural experiment stations.

I have confidence because it is based on the practical experience of some 40,000 test demonstrations sponsored by the TVA, following TVA's development of superphosphate and metaphosphate fertilizers.

I have confidence in it because every impartial agricultural research organization, including the American Farm Research Association, has sustained its basic principles.

I have confidence because it is based on the reports of findings of the Land Grant College Association.

Your organization has made great strides in educating farmers on the provisions of this bill. The October 17 issue of your Official News Letter was devoted to an explanation of the objectives of the bill, and the reasons why its passage is essential.

I shall not attempt to go into a detailed explanation of the measure here, except to point out its main provisions:

1. It provides for setting up a National Agricultural Fertilizer Policy Committee, on which there would be 12 representative farmers, who would serve with officials of agricultural agencies.

2. Provision is made for expanding research and experiment station programs in order that every farmer may have the soundest technical advice on fertilizing.

3. This provision is coupled with an expanded demonstration program along the lines of the present TVA test demonstration program. An average of 75 farmers in each of some 2,000 counties would be given an opportunity to demonstrate the best fertilizing practices as a means of educating all farmers. The over-all program would be administered by the Secretary of Agriculture, through the Extension Service. An assistant county agent would devote full time to the program in each demonstration county.

4. To insure a sufficient lasting supply of phosphate and potash, deposits of these basic essentials would be set aside by the Federal Government for exclusive use in farm fertilizers.

5. To develop modern methods of production of phosphates and potash, two experimental plants would be built by the Government, one in the Gulf area and one in the intermountain area. These plants would be operated as experimental plants by the Government for a period of 5 years. At the end of that time they would be offered for sale to farm cooperatives, and if not purchased by them would be shut down.

Under this bill the goal would be to make it possible for you to buy the plant food you need for your own soil. It would modernize the formulas for farm fertilizers. It would eliminate the wasteful processing of unneeded inert matter. It would eliminate costly transportation of these unnecessary

elements. It would save the unnecessary labor involved in the present wasteful and outmoded system. It would reduce the cost per unit of plant food. It would make it possible through these savings and the educational phase of the program to increase the use of needed plant food and halt the trend toward soil bankruptcy.

It all seems reasonable, and simple. You would think that such a measure could be enacted immediately. It is certainly in your interest. It is certainly in the Nation's interest to protect our basic national resource, the soil. It is certainly in the interest of every man, woman, and child who eats a piece of bread, or meat, or drinks a glass of milk to increase the vitamin and mineral content of those foods.

Where is the opposition to this bill?

So far as I know, active opposition to this bill comes from only one source. That is, the National Plant Food Council, which is a fancy way of saying the commercial fertilizer manufacturers.

Let's take a look at some of the things this organization is doing and saying. Maybe there'll be some lessons in it for us. At least, it'll give us an idea of what sort of fight you and I are facing.

The fertilizer interests have hired one of the ablest and most effective Representatives in Congress to give up his place in Congress and lead their fight against this bill. He is a man skilled in debate. He is a man who knows the legislative processes. He is a man, finally, who knows all the cries and pleas.

What are the fertilizer manufacturers frightened about in this bill? The objective of the bill, the announced purpose of the bill, is to increase, indeed, to double the consumption of plant food in the Nation. You would thing that their organization and their spokesmen would be all out for the bill. But there's a hitch.

This bill doesn't say anything about increasing the sale of sand and inert matter.

This bill doesn't say anything about increasing the number of sacks and fancy brand names.

This bill doesn't say anything about continuing the old, out-moded formulas. Or the out-moded mixing and distribution methods.

This bill is about plant food only. Even so, the end result of its enactment will still be to increase the sales of commercial fertilizers. These same fertilizer interests opposed the TVA test demonstration program, but the net result has been to greatly increase the sale of commercial fertilizers in every neighborhood where there was a TVA test demonstration program. They should have begged the TVA to undertake that program.

But there are still old ways of thinking, and old cries. They've dusted off a familiar one now. "State socialism," they're crying with alarm. This is the same cry that those like them have used so often in this kind of campaign.

It's always "state socialism" when the Government tries to do something in the farmers' interest. But when any of these big fellows come to Washington and want something for themselves, it's a different story. Everything industrialists want is in the name of free enterprise. That's what the industrialists said when they asked for what amounted to huge subsidies in the return to them of taxes from war profits. That's what the industrialists said when they asked for guaranties that have permitted many companies to purchase Government-built plants at bargain prices. All that, plus profits, is what they asked in exchange for war production.

Farmers, too, have been producing for war. Just as in World War I, they were asked for all-out production for war—even though it meant mining their soil. And the farmers responded magnificently, as you well know. With 3,000,000 fewer people on farms during the war years, they increased production 25 percent. They produced enough food for our armed forces, and enough to help keep our allies in the fight. In addition, there was enough food so that per capita consumption among civilians in the United States actually was higher than ever before in our history.

The price which farmers have paid for all this production is further depletion of the Nation's soil.

The bill does provide for the construction of two plants which are essential to achieve its objectives. They're essential to develop knowledge of production and mixing processes—and essential to establish a yardstick for determining what costs should be. But the bill specifically provides that the Government will operate those plants for 5 years only—only a sufficient time to experiment. The know-how of production from those plants will also be available to commercial manufacturers.

You and I went through the REA fight, and won it. We won it against this same cry of "state socialism." In the end, what happened? Hundreds of thousands of farm families got electricity, with its labor savings and other advantages. Those who had fought the measure—the power companies—got new and increased markets. And at a profit.

But the commercial fertilizer manufacturers would rather hold onto outmoded methods, and ancient formulas. They claim there's already sufficient production of fertilizers. If this claim be correct, what it really amounts to is a claim that farmers are buying all of the present types of fertilizers they can afford to pay for. It means they're already buying enough inert matter; it means they're already buying enough sacks, and enough fancy labels. This is true. But the fact is that farmers are buying only half enough plant food. And the only way they're going to be able to increase the amount of plant food is to see to it that the whole system is modernized and put on a basis that makes sense.

The men the fertilizer interests have hired to "protect" them from this bill will not go to sleep. This spring and summer they will approach every candidate for Congress to find out how he stands on this issue. They'll be bombarding Members of Congress with letters. They'll be sending their friends and their friends' friends to see every Member of Congress. They'll be writing letters to the newspapers and magazines about the dangers of "state socialism."

In short, you and I have a fight on our hands. Whether it's to be a long fight, and perhaps a losing one, or whether it's to be a short and successful fight is going to depend on how skillfully we fight, and how hard we fight. Certainly unless every farmer in America understands what this bill can mean to him, we cannot expect that he will support us. That is part of your job—to continue the educational program which has been begun so well by your national organization.

We are all talking today about the atomic bomb and we are frightened by its existence. We know that our Nation could be destroyed by it. I tell you that our Nation will just as surely perish, albeit a bit more slowly, if we do not replenish and rebuild our soil.

Because we have been armed with the confidence which your support gives us, because we know of the importance of this bill to you, and because we know that the welfare of this Nation depends on its passage, Senator BANKHEAD, Representative FLANNAGAN, and I are determined that this victory will be won as quickly as possible.

## The Housing Shortage

EXTENSION OF REMARKS
OF
### HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I made on December 8, 1945:

Friends and neighbors in the Twelfth Congressional District, I am sure all of you have heard stories of the housing shortage in Washington. Many of you will remember when one of our freshman Senators dramatized his search for a home for his family by singing Home on the Range on the Capitol steps.

Yes; Washington is crowded—in fact, bulging with people—and the end of the war has not eased things. There are still far too few homes for the hundreds of thousands of workers who make the wheels of government go round.

This shortage of living space is true not only in Washington, or Detroit, or New York; it is true of every city and town, big and little, in America. We just don't have enough homes—or good enough homes—for all the families in the United States.

When the war started there was already a serious lack of housing. Most cities and towns were already seriously overcrowded.

In the years since the last war, construction had failed to keep pace with the country's growth. So when America once again went to war we had piled up a tremendous housing deficit that the war emergency made it impossible to erase. Nearly half the people in the United States were living in substandard dwellings—in fact, 46 of every 100 American homes needed vital repairs or lacked sanitary facilities such as toilets or even running water.

The energies of the whole Nation were, of course, turned to the job of winning the war after Pearl Harbor. In the 4 years after December 1941, we built only as many new permanent dwellings as should have been put up in one normal peacetime year. This at a time when the need for housing was greater than at any time in our history.

Now we are heirs to this legacy of poor housing, inadequate housing, and tremendous demand for housing—built up before the war and greatly augmented during the war years.

Every week that passes makes the problem more acute, makes the solution more necessary. Finding decent homes for American citizens is one of the greatest challenges of the postwar period.

One of the most startling phenomena of the whole war period was the great movement of population—the shift from old homesites in search of new ones. During the war, 4 out of every 10 workers joined in this great mass migration. More than 15,000,000 people moved from their prewar homes. Over 7,500,000 moved long distances.

Most of these movers were war workers and their families, on the move to find work in war industries. The families of millions of servicemen took up their belongings to settle down in new areas. Very few of these millions found anything like decent housing for their wartime homes. Abandoned shacks, condemned tenements, and trailer camps became their homes. Hundreds of thousands moved into already crowded homes of relatives and friends.

The end of the war has not meant the end of squalor, discomfort, and overcrowding for these millions of Americans. The end of the

war, the closing down of war plants, the return of servicemen has only aggravated and not alleviated the really tragic shortage of homes.

War workers are again on the move, looking for new jobs and looking for new homes—decent, permanent homes—where they can raise their families.

The veterans are coming home, millions of them, wanting to establish their own homes for the first time.

During the 4 years of the war, 1,500,000 new families were formed. One million five hundred thousand servicemen were married. It is expected that a like number will be married as soon as they leave the service.

This means that among veterans alone there will be at least 3,000,000 new homes needed.

A place to live in comfort and decency with his family would seem to be the least of the things a democracy should offer its citizens. A place to live, to start life anew, is the very least we should offer these citizens who fought for democracy in muddy foxholes all over the world.

I saw a cartoon in a Washington paper the other day, and although it was on the comic page, there was little comical about it. It showed a young man still in uniform with his wife, standing before an apartment house that carried the familiar sign, "No vacancies." The veteran is saying to his wife, "Well, at least I had a fox hole on Okinawa."

This is grim humor indeed, and the truth.

The need for homes is greatest among the workers and servicemen who together assured victory, but it is not confined to them. Their need is urgent and immediate, but is just a part of the whole picture of poor housing, bad housing, throughout all sections of the population.

To change this picture, to build the homes we need today and will need tomorrow for our growing population, means that all the skills and genius of American business, labor, and government must be combined. Housing is a No. 1 priority among our postwar problems.

There is another side to our housing problem, and that is the employment side. New building—home construction—can provide work for more people than any other industry in America. These jobs are not only in the construction industry itself, but in the industries which supply the raw materials for construction; in the industries which make the household equipment, the furniture and thousand and one consumer items that go into a new home. A vigorous, well-planned housing program could be the cornerstone of the full-production, full-employment economy we all recognize as our national goal.

Such a housing program has been put before Congress by Senator WAGNER, of New York. Public hearings on this legislation are now being conducted before the Senate Banking and Currency Committee.

This housing bill, designed as it is to meet the critical housing shortage and to contribute to the job needs of our economy, deserves the support of all groups. It has been enthusiastically endorsed by consumer groups, by labor organizations, and by progressives at all economic levels. It has bipartisan sponsorship in the Senate.

Very briefly, the broad purposes of the bill are these: First, it would assure construction of enough new homes to enable the building industry to make its vital contribution to full employment. Second, it would wipe out the long-argued deficit in housing and make provision for future growth. Third, and this is very important today, it would bring home ownership within the reach of moderate-income families as well as provide decent rentals at moderate prices for this economic group. The housing program envisioned in Senator WAGNER'S bill would also plan for the elimination of slum areas and for the rehousing of slum dwellers in decent environment. A long-range plan of city, town, and rural development also is called for.

Housing is, of course, primarily, a community responsibility. Local housing needs must be met by local planning and enterprise. Today, however, every community shares in the great national housing shortage. It is a national disgrace, and calls for correction at a national level—with goals and policies established through Congress.

Senator WAGNER has proposed that the national character of the housing problem be recognized through the retention of the National Housing Agency to coordinate the activities of all the Federal agencies concerned with the problem. In this role of coordinator, the National Housing Agency would aid in the integration of local programs. It would make studies of needs and recommendations as to remedies.

The Agency would serve the very important function of encouraging localities to study their housing needs and plan for community action. It would aid in the establishment of housing standards to prevent the blight of jerry-built homes so common to thousands of American communities.

Federal aid must be advanced to communities to assist them in the destruction of slums and the building of new dwellings to take their place. The Federal Public Housing Authority, which has done this work in the past, logically could continue in this program. Slum clearance, however, should be predicated on the proposition that the displaced families will have decent homes, at rents within their reach, into which they can move.

Housing in America has too long been based on the same practice which prevails in families with many children—the hand-me-down system. The well-to-do have gotten the new, good-condition homes. The middle-income group gets the home when it has deteriorated and its real-estate value fallen. Then finally, the low-income group takes over when the dwelling has become practically uninhabitable, substandard, and unsafe.

A good housing program will prevent this by enabling all income groups to have decent homes—through rent or purchase. A resumption and extension of low-rent housing projects and liberalization of FHA mortgage insurance laws to permit wider spread ownership of new homes, will work to this end.

Some of the poorest, most unsafe housing in America can be found in our rural areas. The slums of the cities are well publicized and widely deplored. The rural slums are little heard of—but actually they are much worse than their city counterparts. More than one-third of the rural homes are in need of major repairs—in fact, are unsafe to live in in their present condition. A system of loans, handled through the Department of Agriculture, could go far to help American rural families to rehabilitate themselves. The loans should be made contingent on conformity to housing standards established by the Secretary of Agriculture in cooperation with the National Housing Agency.

I feel very strongly that the veterans of World War II, millions of whom are in desperate need of homes, should be given top priority on housing. They should have first call on present housing, and should be given special consideration with regard to financing of new homes.

**The program I have outlined is just a sketch of the housing legislation needed to meet our major domestic problem—the problem of homes for our citizens. It will call for the expenditure of millions of dollars—but such expenditures will be more than repaid in the prosperity to which decent housing is the key.**

## Outspoken Sympathy for General Motors Strikers

EXTENSION OF REMARKS

OF

## HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I quote extracts from several publications on the General Motors strike, which is gaining support from nonunion citizen groups and the noncontrolled press:

WHO IS STRIKING?

We are more and more inclined to wonder who is on strike, General Motors or its employees. Technically, of course, the employees are on strike, i. e., they walked off the job and set up a picket line; but, in reality, this action may be considered as a countermeasure to the corporation's refusal to meet the union halfway. We cannot see that GM has made anything like a serious effort, such as the collective-bargaining process implies, to answer the union's arguments for a 30-percent increase in wages with no hike in prices. (America, December 8, p. 254.)

EFFECT ON SOCIETY IGNORED

General Motors wants its profits, but perhaps more than anything else it is determined to conduct its vast operations protected from the public eye. * * * The men of the old school who have worked their way to the top of many of our large corporations still have a tendency to think of labor as an item in the accountant's ledger. * * * They think of a business as their own private business, regardless of how many human destinies it affects. (The Commonweal, December 7, p. 182.)

GM OFFICIALS NOT KINGS

The whole attitude of industrial management reeks of threadbare and regal arrogance, as out of place in the modern world as the divine rights of kings. It smells of moth-eaten ermine and musty prerogatives. This judgment is supported even by the choice of words used in corporation press hand-outs. A recent GM statement, for instance, said: "Abdication of management * * * is in essence what the union demands."

In using the word "abdication" the corporation dug down into its subconscious mind and came up with its real feeling. "Abdication" is a word which means, in common usage, the resignation of a king. Webster's dictionary says the word "applies particularly to the relinquishment of authority which is inherent or sovereign; as to 'abdicate the crown.'"

The managers of industry think they are sovereign powers; that is the real trouble. * * * They have flouted the sovereignty of the American people. They have precipitated costly strikes which have a ruinous effect upon the prosperity of the Nation. (The Wage Earner, December 7, p. 8.)

THE BOOKS MUST BE OPEN

What General Motors is most against is opening its books. It will not let unions know whether the company can pay. * * * You cannot keep from coming to the conclusion that General Motors should open its books. The stakes are too big to allow secrecy. (The Michigan Catholic, December 6, p. 10.)

## Mail Service to Soldiers and Sailors Should Be Improved

EXTENSION OF REMARKS
OF
**HON. LAWRENCE H. SMITH**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, Congress is about to recess for the Christmas holidays. I know that many of the Members are cognizant of the fact that on this first peacetime Christmas many of our boys are still thousands of miles from home, and will not enjoy the Christmas season as we understand it. Under those circumstances it seems to me that both the Army and the Navy could well afford to spend considerable time in an effort to see that these boys have adequate mail service from home. This is the situation at the present time. I include herewith a letter from a mother who is greatly concerned about her boys who have not been getting regular mail service in the far Pacific. This situation should be corrected:

RACINE, WIS., *December 16, 1945.*
Mr. LAWRENCE H. SMITH,
*Washington, D. C.*

DEAR SIR: As you already know I have a son with the Navy anchored at Shanghai and one at Hong Kong, the only children we have.

The mail situation is pathetic. Mail as of December 3 tells us there has been no mail for the past 2 months, that is October's and November's letters.

We mothers resent being told (on the radio) to write, as the boys need mail as much as ever, when we write air mail every day and then hear that the service is worse than when the fighting was going on.

They won't declare the emergency over, and now when our eldest son with 3 years' service would be eligible next month, they freeze machinists' mates.

How can you expect anyone to reenlist under existing conditions? They are doing absolutely nothing and they're just anchored, and living amongst disgusting conditions. The Orient is no place for our boys.

When will they wake up and consider the voters, who have given so much, only to have lost all their courage in seeing how these patriotic youngsters are being treated.

I cannot sit by helplessly and just talk about it. I must express myself to those who can do something about it.

If it were not for a faith in God, who is still the Ruler of the universe, I would certainly be crushed under the load I have borne the past 3 years.

May God give you, our leaders, wisdom and courage to seek His will and do it, regardless of what pressure may be brought to bear.

Sincerely yours.

## Americanism

EXTENSION OF REMARKS
OF
**HON. J. GLENN BEALL**
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. BEALL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the address given by former Mayor Howard W. Jackson, of Baltimore, at the meeting of the Lawrence Everhart Chapter of the Maryland Society of the Sons of the American Revolution at the Francis Scott Key Hotel, Frederick, Md., November 30, 1945:

I am very happy tonight to have this opportunity to speak to the Sgt. Lawrence Everhart Chapter of the Maryland Society of the Sons of the American Revolution. I can think of no more fitting occasion than this on which to discuss Americanism—for today marks the anniversary of the repudiation of the Stamp Act of 1765 by the Frederick County court. More, tonight at the Francis Scott Key Hotel, in this historic city so famed in patriotic song and story, so steeped in traditions that hark back to our freedom-loving forefathers, let's take the opportunity to turn on ourselves the merciless spotlight of truth. One hundred and eighty years ago the people of Frederick, with the people of Maryland and the other 12 Colonies, had the conviction and the courage to repudiate what they knew was a violation of their personal liberty. Perhaps we in 1945 can spare a few minutes to examine the state of our own personal liberties—that is, what is left of them—and decide whether or not the time has come for us to do a little repudiation of our own.

I could, quite properly, spend the next 15 or 20 minutes telling you the old, old story you know so well—the story of how the American colonists came to the wooded shores of America to escape government control and persecution. They were a virile, simple, dignified people, with one object in view—personal liberty. No doubt they had what we call today single-track minds. They knew what they wanted, and they took direct, decisive steps to accomplish their goal. You'll say the problems they faced cannot be compared with those we face today. Specifically they cannot, for that was a simple, agricultural society, where ours is complex and top-heavy; they were few in number, we are many. But basically their problem and ours have a similarity. The difference is not so much in the nature of the problem but in the people whom it confronts.

Just as those early settlers had to fell their trees, build their homes, and till the virgin soil, so did they have to chart their voyage in the New World politically. They had no blueprints to follow. They drew up their own. We have the results of their labor—the blueprints they drew on which to rely. Within the Declaration of Independence and the Constitution of the United States we find all we need in the way of guidance to find our way back through the maze into which we have been wandering for the past 15 years.

The colonists who fled European oppression were escaping from conditions which were imposed on them by a monarchy. But the more shame to us when we know that the encroachments on our freedom have been allowed to multiply under a democracy—and through the fault—not of kings and princes, but of ourselves.

Within our Nation there are three theories of government—two of them entirely alien to the one which gave us birth, which nourished us, and finally brought us to maturity and prosperity on such a magnificent scale that our country has been and is a tower of strength to the rest of the world.

One of the alien forms, as we know, is communism. It is a new form of Russian despotic statism. The other is fascism, and both of them were outcomes of the upheaval, the frustrations and revolutions that followed in the wake of the First World War. Communism is supported in the United States by a political organization, the Communist Party, which grew out of the labor unrest in America following the Russian Revolution in 1917. Fascism is represented by no openly organized party, but it is being carried on by above-ground and underground propaganda. Key members of both these systems are in places of influence in our own country. No matter what we call these two theories, they are alike in essential respects—the suppression of civil liberties, representative government, intellectual freedom; in regimentation of the people, in a throttled press, in the suppression of popular elections, and in the setting up of one despotic leader.

Both systems are old; they stem back to the time of the Pharaohs and beyond. Generation after generation has seen them fail, nation after nation has fallen to ruin under these theories; people after people have suffered and died under these systems. The blood of thousands of our own boys has been spilled in this global war because of them.

One of the principles of sociology is that "progress has not been the rule." And can we doubt it when we stand by and see nation after nation going back to an ancient system of government which has proved its weakness again and again? The burned child, they say, doesn't go back to the hot stove, but supposedly intelligent leaders and statesmen dismiss the recorded political experiences of the ages, and hail tyranny and dictatorship as a new idea—and the answer to the world's problems. What is more startling and even more horrifying is that they turned to such theories even as their own sons were fighting and dying in the battle against tyranny which threatened our shores.

Gentlemen, here within our country we face a common danger. We must realize that in times of depression, social dislocation, and unemployment dictator governments have given work to the idle, organized industrial production, and established order. The war has been won, but there is a noticeable and deplorable lack of enthusiasm and spontaneous joy in our people. There is instead a sort of weary resignation. The individual citizen is confused, tired, and prone to fall into indifference because of the scope of the problems which we must solve, if we are to survive as a democracy, are too ponderous for him. Now, if ever, we must exert vigilance if we are to save our republican form of government.

I ask you to recall the many, many violations of American liberty under the provisions of the Constitution which have occurred in the last decade and a half. The overcentralization of our Government has not even come gradually—it has been glaring, swift, and ruthless. Shall we blame it on the war? Try to remember the high-handed policies that left us gasping long before the war. Since then we have seen the Federal Government invade our States rights, our local communities, and our very homes. We let it happen. We murmured and complained but did nothing. Like a snowball rolled downhill, Federal governmental control has gained.

Naturally the aftermath of war leaves us with tremendous problems which must be solved. One of them is the question of unemployment. It's a serious problem and let me put myself on record now as stating that the Murray-Wagner-Dingell full employment bill isn't the answer. It does not seem likely that an unemployment crisis would come within the next 4 or 5 years. However, we must be prepared for it if it does come. There are too many bitter memories of unemployment in the 1930's for us to take the possibility of another depression lightly. Before we ask who or what can provide full employment let's ask just what is full employment.

In the Senate version of the Murray bill it is defined as a condition under which "all Americans able and seeking work have the right to useful, remunerative, regular, and full-time employment." That has a fine, noble sound—but let's think about it for a

minute. During the war millions of people wanted to work for high war wages or for patriotic reasons. Many of them don't want to work now. Some are too old to work. Some are mothers of young children who ought not to work. Others are boys and girls who ought to go back to school. Full employment ought not to be guaranteed to these millions.

There is another class of people who voluntarily work part time. Another group, who because of personal characteristics, just do not get employed. There is still another group described by Ralph E. Flanders, research committee chairman of the Committee for Economic Development. He classes them this way: "The largest single element in the group with personal handicaps consists of those with a strong 'leisure preference.' This group includes at its extremes both philosophers and bums."

We have been told that 60,000,000 jobs should be guaranteed to the American people. There are two things wrong with this. One is that 60,000,000 jobs are not needed; and two, the word "guarantee" ought to frighten every freedom-conscious American who hears it.

What we really want is a "high level" of employment. And we have three alternatives. Complete Government control. Complete control by free enterprise or free enterprise working in harmony with a Government which will release all the pent-up energy and productiveness of the system instead of locking it in. The third plan, gentleman, I believe is our answer.

Full employment cannot be guaranteed unless full government control is instituted. If that happens, then, we have a communistic form of government, no matter what other fancy name you give it. As we know, full government control means the death of all free-competitive enterprise, the end of the open market, the end of individual ambitions, and mark this well—the end of labor unions. When government is the employer, labor dare not strike nor bargain.

The American free-enterprise system can produce a high level of employment if—and it's a big if—it has the cooperation of the Government. Cooperation — not restraint. Cooperation—not strangling taxation. We know what happens when a business has to meet confiscatory taxes. There is no way to plow back earnings into the business, thereby creating more jobs. The business starves, finally fails, and unemployment has more recruits. We ought to remember that America's amazing industrial development took place when business could keep and reinvest most of its earnings and investors could realize a fair return on their investments. Let's have wise, just taxation and give the system which has served us so well, another chance. There is much more we could say on the dangers of the pending Murray-Dingell-Wagner bill as it stands—but, this is the important and urgent problem before us now. Gentlemen, the Murray-Dingell-Wagner bill must not be passed by the Congress if we are to continue on our American way.

I want to repeat here a statement made by Woodrow Wilson when the big government planners tried to impose wartime controls on peacetime America. He said, "I do not want to be taken care of by government, either directly or by any instruments through which government is acting. Give me right and justice, and I will take care of myself." This has been the backbone of Americanism. This is the first law of the American individual and of the individual States. Recently, we saw another startling example of the octopus of Government control reaching out to engulf the American medical profession.

In President Truman's message to Congress on a national health program we again face the danger signals. But we have reason to be proud of our own State of Maryland, which, characteristically, is a step ahead of other States and already has its own State health program for the indigent and medically indigent under way. Dr. Robert R. Riley, State director of public health, briefly sums up the whole idea when he says, "Maryland can take care of herself as to public health and insurance." Maryland's plan is a democratic plan, with each county appointing its own advisory council and its citizens free to choose their own physicians.

I wish I knew some effective way to impress on you the urgency of our domestic danger. It is for us as citizens to start stripping Government of its controls over us. It is for us to square our shoulders, roll up our sleeves, and pitch into the muddled mess and straighten it out. Not so many months ago the whole world was aflame. Do you, by any chance, suppose those fires are dead? They are smoldering dangerously, ready to burst forth again. We cannot afford to waste time. We must get our feet back on the ground. If it's representative government we want, let's make it work. There has never been an effective substitute for the Republic set up by our forefathers who believed that the dignity and personal freedom of man was the most valuable and important thing on earth.

Back in 1895 Henry Adams asked this question, "Are we in the midst of the last great centralization, with its overtones and undertones, with all its implications as a pattern of culture enclosing politics, education, and ethics?" What would his question be now?

Gentlemen, America stands alone in a world fast becoming socialistic. Americanism since 1776 has stood for all those characteristics which are important to the individual liberty, equality, personal ambitions, freedom of worship, freedom to stand up and speak our minds, freedom to pen the words we wish. These constitute the soul of America.

Is it not time to take inventory? Should we not go back 12, 15, or 25 years and assess the benefits of all legislation, theories, ideologies, Federal and Supreme Court decisions, creation of Government corporations, and policies of Government, many of which have encouraged the trend away from the fundamentals of government as conceived by our founding fathers and are leading us along the road of statism, socialism, or creeping communism.

Everybody seems to be worried about the atomic bomb and I imagine we should be. I hope we are going to keep ourselves better prepared in the future than we have in the past. We need spiritual, moral, military, and economic reconversion. When I think of what has happened in Russia, England, France, Japan, and other countries that could be mentioned, I haven't any more fear of an atomic bomb than I have of financial and economic bankruptcy. I am hopeful for the future. One of the ways to prevent national bankruptcy is for the Congress to become representative and see to it that the administration has a policy that will insure a proper tax system and an economical administration of governmental affairs based on the Constitution.

One hundred and eighty years ago your ancestors made the streets of old Frederick town ring with defiant cheers when they repudiated what they knew was a violation of their freedom. Repudiation of the encroachments on our personal liberties today seems to be in order. Let's get along with it, before it is too late.

## Veterans' Benefits Under the Servicemen's Readjustment Act as Amended

EXTENSION OF REMARKS
OF
## HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. SCRIVNER. Mr. Speaker, when the Servicemen's Readjustment Act was originally considered and discussed, the Committee on World War Veterans' Legislation, of which I am proud to be a member, told Congress and the public it was admittedly experimental. It still is. Changes have just been made—more possibly are in store.

Therefore, this occasion is taken to explain in a general way the benefits as they now exist under the amended Readjustment Act.

ELIGIBILITY

To be eligible for any or all of these benefits the veteran must have been released from service under conditions other than dishonorable, and must either have served not less than 90 days between September 6, 1940, and the end of the war, or have been discharged for a service-connected disability. Rank in service or age makes no difference.

EDUCATION

At any time within 4 years after discharge, or termination of the war, whichever date is later—provided that all such programs must be completed before 9 years after the end of the war—any eligible veteran may receive education for a period of 1 year plus the length of time he was in active service—between September 16, 1940, and the end of the war—with a maximum of 4 years.

To continue for the full period for which he is eligible the veteran must meet the standards established by the school or institution in which he enrolls.

The veteran may choose any approved school that will accept him, and the course he desires to study. He can go to school in any State, but the cost of transportation from his home to the school is his own expense.

The Federal Government pays for all books, supplies, and the customary tuition fees up to $500 per year. While in school he will be paid $65 per month, if single, $90 if married—or has dependents—for subsistence or living expenses. This is enough to help veterans help themselves, and there is no law or regulation against taking outside, part-time work.

This opportunity is not confined to ordinary schools or colleges. He may take short, intensive, more expensive, specialized courses, the maximum tuition, however, being limited to $500. He may elect to take vocational or apprentice training, in which case part of his maintenance will come from the employer.

Many veterans, while in service, learned the value of correspondence

courses. These courses can now be pursued after return to a civilian status, but in this case he does not receive subsistence allowances. The cost of any such course will be established by contract, with a maximum limit of $500.

Education may be commenced while on terminal leave, but no payment is allowed for living expenses until after the leave ends.

LOANS

A veteran may apply for loans from nearly every type of lending agency. His honorable discharge is his certificate of eligibility. Other discharges must be passed upon by the Veterans' Administration.

Property loans may be at the figure negotiated with the lending agency, with the limitation that they may not exceed the reasonable value of the property, or the appraisal of an experienced appraiser living in the community where the property is situated, employed by the Veterans' Administration.

Interest on loans is limited to 4 percent. Home loans may not run for more than 25 years, farm loans not over 40 years, and business loans are limited to 10 years.

There are conditions that property on which loans are to be made must be suitable for the purpose for which it is to be used—for a dwelling, for farming operations, or for a business location. It must also be shown in connection with loans for farms or for business that there is a reasonable likelihood that the veteran will succeed in his undertaking as a farmer or as a businessman.

When the loan is finally completed the Government guarantees one-half—50 percent—of the amount loaned, with a maximum guaranty of $4,000 on real-estate loans and of $2,000 on nonreal estate—chattel or personal property—loans. Thus a veteran is now eligible for the Government guaranty or an $8,000 loan on real estate or a $4,000 loan for business.

The veteran may obtain a loan for the purchase of property to be occupied as his home, or to make repairs, improvements, or alterations on a home he already owns.

The veteran may obtain a loan to purchase land, buildings, live stock, machinery, and supplies, if he anticipates engaging in farming.

The veteran who seeks to enter business may obtain a loan to buy land, buildings, supplies, tools, equipment, inventory, and stock in trade, or for the alteration of realty to be used in his business.

Many regulations by the Veterans' Administration must be changed, but no great delay is expected; and the new simplified procedure should speed up loans considerably and eliminate much red tape which has existed.

This does not mean that any veteran can go into any bank or to any lending agency and get a loan up to $8,000 merely for the asking. He goes in as any other person and makes his deal. Of course, the lending agency and the Government want some reasonable assurances of the soundness of the loan—of the ability to repay it and of the value of the security.

EMPLOYMENT

Assistance is provided in placing veterans on jobs, and in each State a veteran is on duty as placement officer to protect the interests of veterans.

UNEMPLOYMENT COMPENSATION

In the event a veteran, after complying with State law relating to registration for work, cannot obtain employment, he may receive $20 per week unemployment allowance—for not to exceed, however, 52 weeks. The period for receipt of this benefit is fixed by length of service—24 weeks for the first 90 days in service, and 4 weeks for each month of service beyond 90 days. In other words, 10 months or more of service entitles a veteran to the maximum.

Restrictions are rigid enough to discourage "gold-bricking" and prevent duplication.

If a veteran goes out as his own boss in business, a profession, or on a farm, an allowance is provided to bring his net income up to $100 per month, with a limit of 12 monthly payments. Application for this benefit must be made within 2 years after discharge or the end of the war, whichever is the later date.

GENERAL PROVISIONS

As amended, Americans who served with our allies may receive benefits hereunder if they now live in the United States and have not applied for or received similar benefits from the nation with whose army service was rendered.

The Veterans' Administration is given full power to obtain space by building, purchase, or lease.

Veterans needing artificial appliances can obtain them, with training in their use, and the payment of necessary travel in connection therewith.

Section 1505 of the original act provided that in the event any payment in the nature of adjusted compensation is later authorized, benefits and payments received, including payments made by the Government on defaulted loans, under the act were to be deducted from such compensation. This section has now been repealed. However, this repeal is not to be construed as a promise or assurance that, in order to avoid inequalities, such action may not be taken by a future Congress.

MISCELLANEOUS

At the time the Servicemen's Readjustment Act was amended, Public Law 16, Seventy-eighth Congress, which relates solely to veterans with service-connected disabilities, was liberalized. Veterans with service-connected disabilities, to whom we owe our greatest obligation, are given training and education to help them overcome physical handicaps and enable them to become self-supporting.

Payments for these men and women while in training have been too low. These disabled veterans will now receive—in addition to all training expenses—$105 if single; $115 with a dependent—wife, child or parent. Ten dollars per month is allowed for one child, $7 for each additional child, and an allowance of $15 for a dependent parent.

CONCLUSION

This presentation must necessarily just hit the high spots. For detailed information inquire of the nearest Veterans' Administration office, the local posts of the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the Regular Veterans Association, Order of the Purple Heart, or other veterans' organizations, the Red Cross, or the State veterans' representative.

If you prefer, write ERRETT P. SCRIVNER, 316 House Office Building, Washington, D. C., who is in Washington to serve the veterans and their families.

Note: Have your discharge recorded and photostated.

---

## Present-Day Departures From the Original Conception of State and Federal Governments

---

EXTENSION OF REMARKS

OF

### HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. SPARKMAN. Mr. Speaker, Governor Sparks, of Alabama, recently made a speech in which he clearly pointed out the changing and growing concept as to the proper relationship between State and Federal Governments. Under leave to extend my remarks, I include this speech; also an editorial from the Anniston (Ala.) Star dealing with the speech:

PRESENT DAY DEPARTURE FROM THE ORIGINAL CONCEPTION OF STATE AND FEDERAL GOVERNMENTS

(Address by Chauncey Sparks, Governor of Alabama, delivered before the Association of Attorneys General of the United States in Jacksonville, Fla., November 28, 1945)

The assigned subject is very difficult to handle because it involves considerable personal opinion as to the meaning of terms. Conceding that there was an underlying conception of the State and Federal units in the organization of our government, in order to discuss the question intelligently, we first must come to a definition of what we mean by "original conception."

It is safe to say, I think, that there were some basic remedies sought in the organization of the United States under the Constitution of 1787. History back of the formation of the American Union is familiar to most of us. Our Federalistic form of government grew out of unpleasant relations and experiences which made clear the need for some kind of umpire or over-all director of the destinies of the infant States. We know of the difficulties of the Confederation with regard to such matters as commerce, taxation, payment of debts, and maintenance and pay of standing armies and navies. The loosely jointed Congress of the Confederation had no authority which it could enforce and was constantly reproached by the spirit of independence prevailing among the separate States.

The delegation of authority to the Congress in the Constitution under section 8 of article 1 indicates the fields in which our

forefathers wanted the new United States Government to function. There are 17 distinct delegations of legislative authority. The Constitution provided that the Congress shall have power to: collect taxes, coin money, establish post roads, create courts, declare war, raise and support armies, provide and maintain a Navy, organize, arm, and discipline the militia under State regulation, exercise exclusive jurisdiction over the District of Columbia, regulate commerce, perform other enumerated acts, and make all laws necessary to execute the foregoing powers.

By examining this listing, we may conclude signers of the Constitution evidently had in mind that the Federal Government would apply only to regulation of relations between States and to the exercise of such functions as required uniformity over the Nation. The Federal unit thus became a limited Government, the authority of which was defined in the instrument of agreement. It is significant, however, to note that the exercise of related or incidental Federal powers was not restricted in any wise until the tenth amendment, which provided:

"The powers not delegated to the United States by the Constituion, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Such limiation of authority of Congress, we must admit, arose in fear of a super government. Those who wrote the Constitution under which we now operate had been participants in the American Revolution, some of them in the continental line and others in governmental positions directly bearing upon the conduct of the war. They were fighting for freedom. They were fighting to be liberated from an oppressive mother country. They were trying to rid themselves of a central government which sought to enact laws restricting their personal conduct and to tax them without representation. They were, therefore, afraid of any kind of central government. They were fearful of oppression, of absorption of local authority, of destruction of the States, of lack of freedom of action by the States, and of loss of the liberty which they had gained in long years of suffering and hardship. Naturally, therefore, we can conclude that our forefathers thought that the functions of the National Government should be very restricted.

At the same time, however, they felt the need for surrender by the States of certain rights in the interest of the common good. This is illustrated in section 10 of article 1, whereby certain powers of the States were taken away. Not only, therefore, was the Constitution a delegation of limited outhority to the central government, but it was also a restriction upon the authority of the States, which had been accustomed to exercise sovereign authority since the peace of 1783.

The fear of all government by our ancestors also is illustrated by the first 10 amendments to the Constitution. Such men as Jefferson recognized the experiment which the people were undertaking. In order that, by some basic statements, certain civil liberties might be guaranteed, they proposed through those amendments, to define, as nearly as they could, the fundamental rights of the citizen. The amendments, however, did not limit the general authority of the Congress to legislate within the field of its commission; but they did, both for the Congress and the States, prohibit interference with certain individual prerogatives and rights regarding such matters as the bearing of arms, the quartering of soldiers, unreasonable searches and seizures, former jeopardy, trial by jury, excessive bail and fines, and unusual punishment. Further, by amendment 9 it was provided generally that—

"The enumeration of the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

This idea of a basic conception of limited government, and particularly limited Federal Government, is borne out by the type of amendment subsequent to the first 10. Later amendments deal with civil rights such as voting, equal protection of the law, prohibition against the States in limiting franchise on account of color or sex, and declaring citizenship of the United States. Nowhere does it appear that these subsequent amendments have materially changed the basic conception of the original Constitution or largely expanded or contracted the functions of either Federal Government or the State governments.

What departures from this conception have the last 158 years brought? In order that we may successfully answer the question, or attempt to answer it, we must ascertain what we mean by the word "departure." To depart from a thing is to leave it, to go away from it, to have nothing to do with it. Certainly we wouldn't say that we have treated our Constitution itself in such a manner. Whatever departures there may have been certainly were within the Constitution and not apart from it. We have not gone off and left the original short, pithy document and created a new philosophy of government. On the contrary, have we not, frankly, builded to the framework as needs required, as conditions demanded, and as growth ordered?

There may be a field here and there, however, in which there appears to be at least a change in the conception of the duties and authority of the Federal Government through varying judicial interpretation of the Constitution. As Felix Frankfurter has so tersely put it, "The Supreme Court is the Constitution." We all have had similar experience, no doubt, with our State constitutions. Certain provisions, we thought, meant one thing, but the courts decreed they meant another. Of course, the court was always wrong if the rights of our clients were involved; nevertheless, the court's ruling was still the law.

Each era of our history has taken its whack at the Constitution. We have had the old stand-patters. We have had the rigid and ruthless constitutionalists. We have had those who believe that the Constitution exists solely for the purpose of guaranteeing an individual the right of life, liberty, and property and should be construed in the narrowest sense to that end. And we have had the liberals, the wild-eyed progressives, and those who would make the Constitution what they think it ought to be. But through all this difference of opinion, we have come through with a rather well-construed Constitution which, by and large, retains intact the idea of a limited government, and particularly limited Central Government, provided by our ancestors.

The central theme of the Constitution seems to have pervaded much of our judicial construction and administrative interpretation. This central thought has been: there are two governments to deal with—one, the State, the other, the National—and that each has a separate field of sovereignty. Both have tremendously expanded since 1787 and have assumed functions other than those which were originally contemplated. Our problem today is to retain that distinction and yet not retard growth. Whenever it is necessary for the Federal Government, because of expanding needs and requirements, to enter a field of regulation, it should be done with the central theme in view that the Federal Government will not usurp certain functions which were left to the States and which the States themselves can perform adequately.

In some things there has been perhaps an expansion of, if not a departure from the conception of a limited Federal state. Here is where most of the cry and hue arise, especially from State officials. We might consider relative taxation as a measure of the central unit's growth. The Federal Government has become the largest collector of taxes of any of our many governments. For instance, in 1912, all taxes collected by governmental units in the United States were divided as follows: the Federal Government collected 28 percent; the State governments, 14 percent; the local governments, 58 percent.

Look at 1938 for a comparison. In that year, the Federal Government collected 41 percent; the States, 26 percent; the local governments, 23 percent—a reversal of the situation giving to the Federal Government nearly one-half as against one-fourth 26 years before, the State governments one-fourth as against one-seventh, the local governments one-third as against more than one-half. This shift possibly was demanded by the people, a right which they retained in the tenth amendment to the Constitution, in absolute agreement with the powers delegated to Congress.

"To lay and collect taxes, duties, imposts, and excise, to pay the debts and to provide for the common defense and general welfare of the United States."

This use of taxing authority by the Federal Government is certainly much broader than was the original conception; and the power has been used for many purposes other than those, and I think all of us can agree, which were conceived by the framers of the Constitution. That the growing Federal tax levy is legitimate, there can be no doubt. The only controversy in the past has been concerning whether the taxes were used properly. When we come to that question, then we must define very carefully the word "welfare."

Another field in which the Federal Government has gone further than was contemplated originally is in the matter of civil rights. These changes have been influenced by amendments to our Constitution. Around them has been centered much of the controversy in the last three-quarters of a century as to the proper application and construction of our Constitution. They are not a part of any basic conception. They are something which has been added by action of the people of the United States through their legislative bodies or in conventions.

Other matters, however, not involved in amendments to the Constitution, such as social insurance and relief, regulation of employer and employee relationships, and public health, have to do with the welfare of the individual citizen of the United States. Much of such legislation has been enacted under the assumed authority resting in the highly controversial public-welfare clause. Some of it has been rested upon the authority of the Federal Government to tax; other of it, upon the authority of the Government of the United States to do all necessary things to carry out its express or implied obligations.

Much of the so-called departures has arisen under what is known as the interstate commerce clause. This is the third authority delegated to the Congress, and is as follows:

"To regulate commerce with foreign nations, and among the several States, and with the Indian tribes."

Here we have another play upon words. The word "commerce" meant something in 1787. It meant another thing in 1860. And it means an entirely different thing, or a series of different things, in 1945. But the term is there used, and words, like individuals, grow. They grow in meaning and in application.

Under this commerce clause has occurred much of the apparent departure from the original conception which the Constitution makers may have had of the State and Federal units. Fine and technical distinctions relating to the commerce power often have been drawn in the light of then existing

commerce, industry, and social organization. No one can doubt that the construction of our Constitution has been very greatly influenced by the age in which it has been construed—by the experiences available to that age and by the condition of our social order and of our industrial and agrarian life.

There have always been two schools of thought among the American people regarding the relative importance of the Federal Government and the States. One is that the Constitution should be rigidly construed to restrict the field of operation of the Central Government. The other is that there should be a liberal construction in order that the Federal Government might carry out its duties and in order that the people of the United States might secure the blessings of a wisely administered national government rather than of often inadequate State government. Into this controversy over the meaning of the Constitution many factors add their influence. The psychology of the times no doubt influenced to a great extent any one generation's conception of the purposes of the Federal Government. Otherwise, there could not have been an emancipation proclamation.

Our early judiciary had a yardstick by which it measured the constitutionality of laws or actions. In fact, it made the Constitution, and under the principle of stare decisis this structure was used by subsequent courts, often perhaps pursuing the course of least resistance rather than courageously meeting the impact of a growing Nation. Such a procedure of judicial determination was not concerned with the needs. It simply said, "Does the law fit the Constitution like one part of a jig-saw puzzle?" If the law didn't, it was stricken down; if it did, it was upheld. This process is often called the judicial slot machine—you put the facts into a box of fixed principles, pull the lever, and out comes a printed answer.

The character of our courts made a greater contribution to the construction of the Constitution than did any particular environment. In fact, so pronounced was this feeling that in 1937 it was decided by the then authorities to pack the Court with liberals in order that the influence of the standpatters could be neutralized. That was a dangerous suggestion. However, no government has the right to stand in the way of the progress of its people. If the people wanted national agrarian relief, public works administration, public welfare and social legislation, regulation of wages and hours and of production and distribution, they should have had some way to achieve their desires.

Let us recognize that, since our Constitution was written, we have expanded into a great people—in area, in population, in culture, in industry, in social development, and in agriculture. So much have we grown, that even our material development has far exceeded the probable conception of our founders. They were looking at a small country, bounded on one side by the Atlantic Ocean and on the other by savage Indians. They were concerned with providing protection against these Indians and against foreign foes by a Central Government which had the authority to raise and support armies. Life at that time was simple, communication was almost impossible, and transportation was crude and ineffective. Quite obviously, the conceptions of the persons who wrote the Constitution were influenced by their own experiences, observations, and surroundings. If you had the Constitution to write today, would you write it differently and in the light of present environments? At any rate, I think one can reasonably say, none of us would have written as briefly and concisely as our forebears did.

In explanation of what we term "liberal" construction of the Constitution, we can point readily to those things which have influenced this character of departure. For instance, who in 1787 envisioned the radio, the airplane, the telegraph, the wireless, the telephone, the electric light, or the atomic bomb? We have achieved in the last 75 years large industrial development, equaled by no other nation, agrarian resources such as the world before has never seen, and a complex economic and social life not conceived by those who wrote the Constitution in 1787. The interdependence of our people has caused us no longer to live to ourselves, but among all others: the framers of the Constitution of 1787 emphasized the individualistic way of life.

Out of all these changes arose new needs, social and economic; protection against disease and distress, low, and impoverishing wages, and hard and destructive hours; security against industrial accidents and disaster; protection against the hazards of rapid transportation and modern inventions; extensive public education. Both the Central Government and the States had new obligations thrust upon them. Who saw this life 160 years ago, and who now sees our live 160 years from today? I think that none in this audience would say that the form of government we had today is the kind we will need in 2100 A. D.

Our expanding industrialization, our population growth and the development of large cities, our turn from the farm to manufacturing employment, our intensification of agricultural production, our rapid transportation and communication have all made a contribution to a new conception of the distribution and scope of functions of government. Particularly have our national obligations increased.

Had we stood idly by and let these things develop themselves, there would have been chaos. As in 1797 when the States reluctantly, and very reluctantly, came together to surrender a few of their rights in the interest of a common need which they individually could not fill, so would our people have had to have another convention of some kind to meet the demands of our expanding life. Government would be negligent if it did not provide control wherever necessary and regulation wherever required. No government can stand in the way of progress or refuse to lend its assistance toward the development of those things which make a better way of life. It fails utterly when it stands by and does not do that which is necessary.

We thus come to a postion where we ask ourselves, conceding that there has been a departure from our forefathers' conception of the roles to be played by the Federal and State Governments, whether this departure is wise or unwise. I am sure some of us will agree that in many instances it was unwise. I am sure some of us will agree that in other instances it was wise. And I am sure there are others who will agree that the Nation is on the way to ruin because all of our constitutional privileges and rights have been taken away. All I can say is that you and I must live in the days in which we were born and not wish ourselves in what we might think of a happier period. I would not live under the simple and scarce life of 1787 even if you would return to me all of my so-called lost rights, liberties, and freedoms and whatever may have been the original and basic conception of the framers of the Constitution. I would rather live with today's advantages and improvements and surrender some of those blessings.

I think we can say that our departures are more in the nature of growth than they are departures. As the child begins in simple conception of things and matures as his education advances, his experiences multiply; the same is true of government. The tree starts from a tiny seed and grows to towering height. Even so our State and Federal Governments began from simple things, but have grown, in the grace of God, to be the greatest on earth—and with their original conception largely retained but grown to manhood.

---

[From the Anniston Star]

SPARKS IS COURAGEOUS

Governor Sparks, of Alabama, made a most courageous stand in a recent address to the National Association of Attorneys General, when he said that States' rights notwithstanding Federal regulation has become increasingly necessary, "because of the expanding needs and requirements" of a growing nation.

It is not often in the South, which fought a war on the principle of States' rights, that men of vision summon the courage to speak so profoundly in behalf of their convictions. Such utterances, coming from a section of the country which needs to rise and broaden its scope, are indeed comforting. They reflect a trend of thinking that is strengthening and helpful.

Governor Sparks summed up the need of Federal regulation in a most convincing manner when he so well said: "I would not live under the simple and scarce life of 1787, even if you would return to me all of my so-called lost rights, liberties, and freedoms, and whatever may have been the basic concept of the framers of the Constitution.

"I would rather live with today's advantages and improvements and surrender some of those blessings * * * Had we stood idly by and let these things develop themselves—growth in population, development of large cities, a turn from farm to manufacturing employment, intensification of agricultural production, rapid transportation and communication—there would have been chaos.

"Government would be negligent if it did not provide control wherever necessary and regulations wherever required. No government can stand in the way of progress or refuse to lend its assistance toward the development of those things which make a better way of life. It fails utterly when it stands by and does not do that which is necessary."

Federal regulations and controls now in effect in the United States augur for progress and development. Without them there would be disturbed and unsettled conditions that would work for disunity and an ultimate collapse of our governmental structure that excels that of any other nation.

The Nation has grown big and powerful, strong and substantial, under a system of regulations that have been applied as the need for them developed. And as they have been installed, the people have lost none of the freedom and liberties granted under the Constitution. If anything, there are more equal rights.

## "Siam to You and I Do Mean You"

EXTENSION OF REMARKS

OF

## HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, anyone that has any intention

of voting for the Truman loan to Britain should read the following article and ask himself if he wishes to be a party to furnishing funds for such unworthy performances. The article in the December 19 issue of the Washington News by Mr. Peter Edson follows:

SIAM TO YOU

(By Peter Edson)

There is funny business in Thailand which will need a lot of explaining by the British Government and the United States Department of State, according to Americans recently returned and familiar with what goes on in that part of the world.

Two days after Pearl Harbor Jap forces moved into Thailand—old Siam to you—and took over. A month later the Japs forced the Thai Government to declare war on the Allied Nations. The British declared war right back, but the United States never accepted that declaration as expressing the will of the Thai people.

In Washington the hard-working Thai minister, M. R. Seni Pramoj, likewise did not recognize his country's declaration of war and he began organizing a Free Thai resistance movement. Twenty-one Thai students in United States universities were handpicked, made officers in the Free Thai army, and turned over to Office of Strategic Services—Gen. Wild Bill Donovan's old cloak-and-dagger outfit—for training in guerrilla warfare and underground work. By March 1943 they were ready to sail for India, cross into China, and make their way into Thailand. Two were caught and shot, but the other 19 did legion service.

First they linked up with the Free Thai resistance movement organized inside the Jap occupation. This underground was so good that its head was Luang Pradit Manduharm, the regent who was technically the Jap's puppet ruler. In OSS code messages he was known as Ruth. The Japs never caught on.

Ruth's underground forces numbered 40,000 or more. In addition, the OSS boys trained 10,000 guerrillas. They built airstrips in the jungles, set up weather stations, operated radios, rescued American and British fliers, and in general operated one of the best spy and intelligence rings of the whole Jap war. All this while OSS and OWI were pumping propaganda into Thailand, telling the natives about the Atlantic Charter and what a bright new world this was going to be come peace.

When peace came, a delegation from the Free Thai Government was flown to Lord Louis Mountbatten's southeast Asian supreme headquarters at Kandy, Ceylon. The British proposed to move in an army of 20,000 to accept the surrender of from 70,000 to 100,000 Jap forces of occupation. That was all right, though the Thais felt they could have done the job themselves. Also, the Thailanders were willing to make good on damage to any British property and give back certain territory acquired under Jap auspices.

But along with these purely military terms, the British negotiators, led by Maberley E. Dening, British Foreign Office adviser to Mountbatten, presented a set of economic demands. These demands have never been made public. They were presented as being joint United States and British terms. Actually, United States officials in Ceylon or Thailand or Washington had never heard of them, as the Thai negotiators discovered when they backed off and asked the American pals what the pitch was. On American insistance, the economic terms were dropped—for the time.

They were brought up again when Thai negotiators came back to Kandy on September 25. According to Thai sources, these demands would have turned their whole country over to the British for an indefinite time.

Negotiations were broken off October 4 when Dening had to go to Java, where the British are also having trouble. Negotiations were resumed at Singapore on December 4, and may or may not be concluded this week. A new set of terms has supposedly been presented to the Thailanders.

Pramoj has been back in Bangkok for about 3 months and is now his country's Prime Minister. If he is forced to sign over his country to British occupation, instead of Jap occupation, that will probably be the end of him.

The question this raises for the United States Department of State is whether this country will let the British take over Thailand with the rest of the Malay Peninsula, or will stick to Secretary Byrnes' statement of last August 18, recognizing and backing up the new Thailand as a free, sovereign, and independent country.

## Conditions in Poland

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. WASIELEWSKI. Mr. Speaker, many men have visited the Russian-dominated areas of Europe and reported the atrocities visited upon the unfortunate peoples. Recently Edward J. Kerstein, of the Milwaukee Journal staff, visited Poland and wrote at length about what he saw. Mr. Kerstein is not a propagandist, but is a reporter in the highest sense of the word. His reports confirm statements that some persons have been inclined to pass off as mere rumors or propaganda of the opposition. I have personally know Mr. Kerstein for many years and can vouch for his integrity.

As a part of my remarks, I wish to incorporate a newspaper story reciting Mr. Kerstein's report on his visit to Poland, which appeared in the Milwaukee Journal of December 17, 1945:

TERROR GRIPS POLES, CHARGE

A Poland bowed in terror, sorrow, and hunger was described with stark realism Sunday by Edward J. Kerstein, of the Journal staff, speaking at the South Side Armory to a capacity crowd. Many in the audience were born in Poland or had relatives there. The meeting was under the auspices of the Milwaukee society of the Polish National Alliance. Kerstein, who speaks Polish and was able to get first-hand information from the people themselves, has just returned from a month's tour of Poland.

"The people of Poland today are afraid to speak, afraid to assemble, and afraid to protest against their wretchedness," Kerstein asserted. "The country has all the appearances of occupation. Secret police awaken the citizens at night and carry them off, never to be seen again. The press is strictly censored and book stores are forced to sell Communist pamphlets."

FIFTY A WEEK SHOT

People dare not venture into the streets after dark for fear of attack and 50 Poles a week are shot in gun battles in the streets of Warsaw alone, he declared. Russian soldiers loot stores and homes, rob and assault women on the streets, and shoot even Polish militiamen who attempt to defend civilians, he said.

When Kerstein and two other correspondents entered Stettin on a British truck they were halted by a mob of excited Poles, he related. The British major in command jumped from the truck with a machine gun and quieted the mob, then asked what they wanted.

They told him that a man had been shot and that they wanted to have him taken to a hospital. The major agreed to let the wounded man and four Poles on the truck. At the hospital they were told by the wounded man and his countrymen that he was a militiaman who had attempted to investigate when two Russian soldiers seized the purse of a woman, who was present to confirm the story. The Russians had told the Polish soldier to go away, and had shot him when he protested, they said.

TELL OF SUFFERINGS

Handkerchiefs blossomed out of pockets and purses in the hall as the speaker told of sufferings and oppression in city after city, town after town—Cracow, Szczecin (Stettin), Grodzisk, Lodz. The names struck deep, as many of the audience recognized their birthplaces and the homes of loved ones.

"Throughout Poland there is a heartsickening feeling, a soul-chilling feeling of antagonism toward the provisional government," Kerstein declared. "The Poles stretch out their hands to you. They want to be free. They would rather die than communize themselves."

They want five principal things which only America can help them to get, Kerstein declared: The evacuation of Russian garrisons; the honest distribution of UNRRA supplies; a voice in their government; an immediate free election; and the end of arbitrary and unexplained arrests by secret police.

The audience responded to an appeal for contributions to American relief for Poland by crowding to the platform with more than $600 in gifts, ranging from $25 down to a few cents. Building Inspector Leon Gurda, president of the Milwaukee chapter of the relief group, acknowledged the first few donations by calling out the names of donors, but soon had too many to acknowledge individually.

Dr. Joseph Rozmarynowski presided at the meeting. County Supervisor Henry Wagner introduced Kerstein, and Arthur Ehrmann, an assistant city attorney recently back from the Navy, gave an added appeal for relief funds.

## The Sunshine International Air Route

EXTENSION OF REMARKS

OF

### HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, I am today forwarding to the Civil Aeronautics Board a petition signed by 21 Representatives in Congress from 12 Western and Midwestern States. This petition is, in fact, a statement urging the Civil Aeronautics Board to give every consideration to the recommendation of its examiners that the route of Western Air Lines be extended from Great Falls, Mont., to Edmonton, Alberta, Canada.

Favorable consideration of this application will be in the best interests of the western and midwestern parts of the United States and Alaska. This route—the sunshine international air route—has proved itself to be the most successful for weather, terrain, and general flying point of view and its merit has been indicated by the use made of it by the Air Transport Command during the war and even after the actual cessation of hostilities.

The approval of this recommendation will provide the shortest and most direct route to Alaska and the Orient for 13,000,000 people of the intermountain region comprising 41 percent of the area of the United States. The people of this area should not be compelled to go either to the east or west when their most direct air route lies along the inland route already established and put into operation by the Army.

## The Potsdam Decisions

EXTENSION OF REMARKS
OF

### HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Thursday, December 13 (legislative day Monday, October 29), 1945*

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Christian Century, one of the leading and outstanding Protestant church papers of this country. One editorial begins on page 1247 of the November 14, 1945, issue, and the other editorial begins on page 1311 of the November 28, 1945, issue.

I have received from the Public Printer an estimate which indicates that the editorials will exceed by one-third of a page the two pages allowed under the rule for printing in the RECORD, and therefore, a statement of cost is necessary. The estimated cost is $121.40.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Christian Century of November 14, 1945]

ARE WE MURDERERS?

The terrible consequences of the Potsdam folly are already beginning to appear. When that conference adjourned this paper warned that its decisions regarding Germany were worse than those of the Treaty of Versailles and would lead to more tragic results. We insisted that "the American people must disociate themselves from the hypocritical pretension that this pattern of settlement is democratic in either its inception or its result, or that it can lead to 'a just and enduring peace.'" (See editorial, Treaty of Versailles Is Outdone, in the issue of August 15, 1945.)

It is now clear that Potsdam is creating chaos rather than any semblance of peace in Europe. Under its provisions millions are being robbed, raped, turned out of their homes, forced into slavery, tortured, starved, driven to suicide, killed. Responsible observers warn that in Germany alone, if present policies continue, as many as 10,000,000 are likely to die this winter of malnutrition and disease. These will not be the Germans whose brutality disgraced the invasions of Poland, Russia, Holland, France, Yugoslavia, and Greece. They will not be the Nazis who perpetrated horrors like Buchenwald and Belsen. They will be the old, the women, especially the nursing mothers, and the children.

I

"Children by the millions are in imminent danger of starving and freezing as winter comes to Europe unless immediate help comes. * * * Helpless children cannot survive much longer unless there is a united effort to save them. * * * Only by immediate and coordinated effort can a colossal catastrophe be avoided." Who said that? Not some sensation-hunting newspaper correspondent (although the correspondents, to their honor be it said, are beginning to cry out at what is going on in the regions they are permitted to visit). But that is a statement jointly issued last week by the World Council of Churches, the International Red Cross, the World Jewish Congress, the Save the Children International Union, and Catholic Charities.

"In some European districts no child born in 1945 is still alive." Who said that? A church leader respected for the sobriety of his judgment throughout American Protestantism—Dr. M. R. Zigler, of the Brethren Service Committee, now in charge of the relief work of that church in Europe.

"Thousands of bodies are hanging from the trees in the woods around Berlin and nobody bothers to cut them down. Thousands of corpses are carried into the sea by the Oder and Elbe Rivers—one doesn't notice it any longer. Thousands and thousands are starving on the highways. * * * Children roam the highways alone, their parents shot, dead, lost." Who said that? The bishop of Chichester, quoting a German pastor, and reflecting the terrible tidings that daily flood in on the Geneva offices of the World Council of Churches.

All such appalling reports are accompanying by appeals for help. See that UNRRA gets the money to keep the people of Greece, Yugoslavia, Poland, Albania, Czechoslovakia, Austria, Italy, and parts of Russia alive. See that the food England, France, Holland, Belgium, and Norway are trying to buy is made available. See that the occupying armies supply enough food, clothing, and shelter for the wretched people of Germany to prevent the most horrible tragedy of death and suffering yet to afflict Europe. See that church efforts to help are doubled and redoubled, and redoubled again. See that the governments are told that English, Canadian, and American Christians do not want their own food restrictions removed if that means that millions in Europe and Asia must starve. Already it is apparent that these appeals for help will come in far greater volume and with far greater urgency than in the days of the Hoover commission and the mercy-bearing Quakers that followed the First World War.

II

These cries for help must be heeded. No Christian can turn a deaf ear to them—not and remain a Christian. But the situation now developing in Europe is one which no appeal to humanitarian instincts can compass. The time has come to face the fact that the savage, vindictive, economically and politically unworkable vengeance imposed on Germany by the Potsdam Conference is creating privation, hatred, and despair on a scale no UNRRA and no private charity can deal with. This is no passing hatred, but one that will poison all European life for years while it ceaselessly nurtures the seeds of another war.

No help that UNRRA or the church bodies can give will offset the moral, mental, and physical destruction being wrought by the Potsdam policy. For this policy, first reducing Germany to a waste, will eventually spread economic chaos and famine all over Europe. The very millions who were despoiled by Hitler will find their recovery made all but impossible by the brutal and tragically shortsighted course the occupying powers are following in Germany.

The Potsdam decisions have been in effect for 3 months. They have had their chance to prove their worth. Instead, they have proved that they do not work and will not work, except to create chaos. At the same time it has become known that the United States is far more responsible for the Potsdam policy than the American people had believed. And accordingly, as horror piles on horror in the working out of Potsdam's ruthless measures, the United States finds itself a partner in what may, before the present winter is over, become nothing less than mass murder. The Nazis were murderers. Are we about to prove that we are murderers too?

The Potsdam policy is not working. The commission of economic experts appointed by General Eisenhower reported to the Allied Control Council that it could not work. Of course it couldn't. Its economic absurdity has been manifest from the start. What has it done? It has cut off from Germany 30 percent of its arable land producing 25 percent of its food, permitted the Russians to take its heavy industries as reparations, and to strip their own zone of light industries, railway equipment, and even the contents of homes and offices. On top of all that it has dumped into the "rump Reich" at least 14,000,000 refugees from the Sudetenland, Austria, Hungary, and the parts of Germany handed over to the Poles. In other words, it has crammed at least 68,000,000 into a war-ravaged area smaller than Great Britain which has been stripped of the means of supporting any such population. This is called retributive justice. It isn't retributive justice. It is an invitation to disease, famine, and exposure to kill millions of the very ones who have been least responsible for Nazi crimes.

III

Is this just a theoretically possible result of the Potsdam policy? Would that it were. But this is what is happening now, today. It is a situation that is growing worse daily. It caused Ernest Bevin, Britain's foreign minister, to say in Parliament the other day, as he described what he had seen in Berlin: "As I watched, I felt, my God, that is the price of man's stupidity and war. It was the most awful sight you could possibly see." And speaking of the Yalta decision, confirmed by Potsdam, to divide Germany into four zones, Mr. Bevin was honest enough to admit that "I think that probably, now looking back, it would have been better if we had not done it."

Any sophisticated reader, studying the careful words of General Eisenhower in his report made public on October 31, will find between the lines ample evidence that the American Army commander knows that the Potsdam policy is not working well, cannot work well, and if persisted in will produce a mass tragedy.

As for the newspaper correspondents, although most of them still reveal a lively sense of deference to the popular emotions released by the war, so appalled are they by what they see that more and more are daring to try to make the facts known to the American public, leaving their readers to judge what the consequences must be. As one example among many, we quote from a dispatch sent from Berlin to a syndicate of American papers by Donald MacKenzie:

"Children of this city are dying like flies from undernourishment. Typhoid is rampant * * * the shadow of approaching

death * * * gaunt faces of adults * * * slowly starving * * * a ration that supplies scarcely half of the minimum necessary to support life. * * * Worse is to come. * * * No coal or any other heating fuels this winter. * * * Tens of thousands will freeze to death before Christmas. * * * Coffins trundled on wheelbarrows * * * no lids * * * dead are tipped into graves and the coffins resold. * * * Overworked crematoriums cannot handle all the bodies * * * carted off to a common grave. * * * Sewers seeping into the drinking waters."

Nor is this by any means the most harrowing dispatch we have recently read. No wonder a newspaper editorial speaks of "the ferocity of the peace."

For thoughtful Americans, however, the most terrible fact about this horror is the proof, now documented, that the United States must bear so large a share of the responsibility. At the moment it is the fashion to blame the Russians. General Eisenhower varies this by blaming the French. It is true that the Russians have done appalling things in looting the parts of Germany which they occupy and in driving out the inhabitants of the parts that are to be turned over to their Polish satellites. It is also true that the French, by their recalcitrance, have sabotaged the Allied Control Council and so made the break-down of the Potsdam scheme the more certain and swift. But it must now be acknowledged that the United States has been more responsible than any other nation for Potsdam itself. If the policy which is now destroying Germany, killing millions, confronting all Europe with the prospect of economic chaos and illimitable human suffering is vindictive, inhuman, immoral, and un-Christian, it must be admitted that the United States proposed this policy, lobbied for it, voted for it, and has taken the lead in putting it into effect.

IV

The Potsdam policy traces straight back to Quebec. There, in September 1944, the President of the United States came with a scheme to break Germany up, to strip it of its heavy industry, to reduce it to the status of an agricultural and grazing society. This plan, which had been drawn by Mr. Morgenthau, then Secretary of the Treasury, was enthusiastically endorsed by Mr. Roosevelt and, according to reports from Quebec, at Mr. Roosevelt's urging received the approval of Mr. Churchill. However, revelation of its main features raised such a storm of moral condemnation and political apprehension in this country and in England that the notion was assiduously spread that the Morgenthau plan had been shelved. We now know that it had not been shelved. When Potsdam met, not only was the Morgenthau plan revived (in his new book Mr. Morgenthau boasts that Potsdam is the implementation of his proposals) but its capacity to murder was enlarged by taking away from Germany great agricultural regions in the east which even Mr. Morgenthau had never proposed to cut off.

Nor is that all the story. On October 17 the United States Government belatedly published the directive which, it is admitted, was sent to General Eisenhower as long ago as last April to govern the occupation and postwar rule of Germany. This long document, which must have been prepared under the direction of President Roosevelt, turns out to contain the whole Potsdam program for a vengeful peace, much of it in the very words of the later Potsdam agreement. So that when President Truman went to Potsdam last summer, he, like Mr. Attlee and Mr. Bevin in the later stages of the Conference, was operating within the limitations of understandings reached at Quebec and made specific in the directive issued to the Allied commander in April. The tragedy that is taking form in central Europe thus results directly from decisions made by the then President of the United States, at the prompting of his Secretary of the Treasury, in the fall and winter of last year and the spring of this.

There is no weighty opinion in the United States, or in any other part of the world, against the stern punishment of Germany's war criminals or against such measures of control in Germany as are required to remove forever any threat of renewed German aggression. But with Germany utterly prostrate, her cities rubble, her army, navy, and air force wiped out, there can be no excuse, either in statecraft or in morals, for the sort of vengeance now being wreaked.

Keeping the food supply at 1,200 calories a day, when it is admitted that 2,000 calories is the minimum required to sustain life, and that mining coal, farming, and other forms of heavy manual labor basic to a going economy require even more, is a slow form of mass murder. Herding millions from their homes into a partitioned country in which only 15 percent of the industry is operating, and that at only 5 percent of capacity, is nothing less than a death sentence for most of these unfortunates. And marching masses of men to forced labor in all parts of the Continent, under conditions that are believed to be even worse than those in the French labor camps which brought a protest from the International Red Cross, is simply adding to the atrocity.

The inhuman course now being pursued in central Europe will reduce that region at once to a welter of misery, and presently will spread to infect and paralyze countries all over the Continent. As a political and economic policy this is madness. As a moral policy, it is a betrayal of all the high purposes for which it was claimed that the Allies fought the war.

After the First World War the conscience of the West became convinced that the destruction of the high hopes of lasting peace for which men had died resulted in large measure, first, from an unjust and implacable peace treaty, and second, from an unintelligent and brutal treatment which left great masses of the German people—especially the young—without hope or opportunity. Today the Allies are not simply repeating the mistakes of Versailles; they are compounding them. They are now, in their occupation policies, producing a greater despair and a greater chaos in the heart of Europe than followed the last war.

V

It is time for the Christian conscience to cry, "Stop." Stop this torture of helpless war victims. Stop this economic and political folly. Stop this progress toward a peace of revenge. So far churchmen and church organizations have spoken with great circumspection, lest governments be offended and even the meager supplies now being distributed be cut down or cut off. It is time to drop this deference. The policy being followed in central Europe is ghastly. It is unnecessary. It is a repudiation of Christian charity and a defiance of Christian morality.

We are glad to see that Christians in England, in parliament, in the press, and in church bodies, are beginning to dare to protest aloud. Those shouts of "Shame, shame" which swept the benches of the House of Commons the other day when a member of Parliament said that he did not "care two rows of pins what happens to the German people, men, women, and children," were the most heartening sound that has been heard in this postwar world since MacArthur spoke at the Japanese surrender.

But Christians of the United States and Canada need to join with the Christians of England, not only in crying shame, but in demanding immediate and drastic revision of the Potsdam policy. And if it proves that our allies will not consent to such a revision, then British and American Christians should call upon their governments to spend their whole efforts on works of mercy in Europe while withdrawing entirely from all complicity in political and economic action which is murder scarcely disguised.

---

[From the Christian Century of November 28, 1945]

SHALL THE CHURCH BECOME AN ACCESSORY TO MURDER?

Silent concurrence by the churches in murder by starvation makes the church an accessory to the crime. As a result of the Potsdam decisions, millions of Germans are starving now. Before the winter is over, five times as many Germans will die as died in the recent war, according to Bishop Dibelius, of Berlin. By no stretch of the imagination can these doomed babies, their mothers, and the aged be called war criminals. They have had no trial. What is happening to them is, therefore, not retributive justice, but murder.

Is the church to remain silent while wholesale murder by starvation is committed? An individual who knows that a crime is being committed and who does not communicate that knowledge or go to the aid of the person in peril is held legally responsible for his silence. He is held to be an accessory to the crime. Will history try and condemn the Christian church as an accessory to the infamy of Potsdam? It will and should do so unless the churches cry out in the name of the compassionate Christ against this high crime against humanity. It will and should do so unless the churches immediately mobilize all their resources to aid this part of the world Christian community.

This aid can be given. It can be given by telling as much of the truth as the churches have been permitted to learn. It can be given by immediate, concerted and large-scale efforts to breach the wall of silence which is raised by Potsdam around the millions of dead and dying in central Europe. Public opinion in Great Britain has swung in the last 3 weeks against the Potsdam policy of mass starvation. The bishops of the Roman Catholic Church, meeting in Washington in their annual conference, have just denounced our treatment of the people of Germany, Austria, and Hungary "in a spirit of vengeance." They declare that "every report indicates that unless heroic measures are taken at once, millions will die from starvation and exposure during the coming winter. The feeding and clothing and sheltering of these suffering people is not a work which can be left to some future convenient date." They hold that Congress must promptly appropriate funds for this purpose and that private relief agencies must be freed to do their part. In this category they of course include church relief agencies.

We rejoice to hear Catholic leadership in America speaking to the Government in this unequivocal tone. How long will it be before Prostestant leadership summons equal courage?

Opinion will change here if the people are given the truth. The church dare not withhold what it already knows. Its mission is to speak for humanity. It is commanded to work for forgiveness and reconciliation. If it fails in this crisis, it has not only missed an opportunity to set its record straight before history. It has also betrayed its mandate from Christ who is its Head.

If every person in America should immediately start doing everything in his power to save the helpless victims of Potsdam, great numbers would die in spite of all that could be done. But the fate of even greater numbers depends upon the American people, and particularly upon the American churches. The churches are the conscience of the Nation. That conscience must now speak to President Truman. It must thun-

der through the quiet corridors of the Department of State. It must demand that the United States Government order the release of the 200,000 tons of Army rations which were sent to Europe for the use of soldiers who have now returned. It must demand that the ban which prevents all private agencies, including the churches, from sending food or other material relief into Germany, be immediately lifted.

In addition, the churches must use their own facilities with far greater intelligence and devotion than they have yet displayed. Nothing that is being done to aid the people in other countries of Europe should be stopped or diminished in volume. But the same Church Relief Warehouse in New Windsor, Md., to which shoes, clothing, and blankets are being sent for France and other countries can also take care of shipments for use in Germany when the way opens. So rapidly is public opinion changing even here that it is not impossible that Washington may relent before the churches are ready to act. On the other hand, the most convincing argument that could be used to change official attitudes would be the accumulation in New Windsor of a great stock pile of life-saving supplies ready for shipment. Every church in the country could and should take steps without delay to collect and ship to this warehouse its own sacrificial share of what is so desperately needed.

Funds for food for the starving, for shelter for the homeless millions who are freezing in the ruins of a shattered continent, for medicine and vitamins for the sick, can be sent to World Council Service, 297 Fourth Avenue, New York 10. Word has just been received in this country that the newly constituted Evangelical Church in Germany has appointed Bishop Wurm, fearless Confessional Church leader who stood out against Hitler throughout more than a decade of Nazi terror, to head a nation-wide relief organization. Every Protestant parish in Germany is united in this organization. It is already at work gathering up the pitiable crusts of bread and the clothing that Christian Germans can spare out of their poverty to help the millions of refugees who are wandering on every road in the country.

This relief organization is known to center its work for the American sector in Stuttgart, where Bishop Wurm is now located. Its headquarters for the British zone is Bielefeld. A document which has reached this paper from the director of Evangelical Church relief work for the British zone says that "the population in Bielefeld has no fuel at all." Evangelical relief is building there and elsewhere sheds "where the frozen population will be able to get warm." The town is overrun with refugees from the east. "In our railway-station shelter, where we have every night 700 refugees and returned soldiers, we have a terrible picture of the dying of a whole nation. There is hardly a complete family. As a result of an appeal made from the pulpit we have received for these refugees and ex-prisoners of war from Russia bread and other foodstuffs, so that we have been able to give each a piece of bread and butter. It is for us a wonderful thing to see how people who themselves have insufficient food can still give from their poverty for those who are even worse off. If only we could see that the Christian churches of the world have not forgotten us."

Shall this appeal fall on deaf ears? After the last war all ecumenical discussions were hadicapped for years by the German church's determination to argue the question of war guilt. The recent Treysa Conference settled that question in 2 days. There the leaders of the Evangelical churches fully confessed not only the wrongdoing of the German people but the church's own sin. They were thereafter accepted into membership in the World Council of Churches. Now it remains for the churches of other lands to demonstrate in deeds of forgiveness the restoration of ecumenical fellowship in the world-wide Church of Christ.

In what better way could the churches of America confess our own share in the sins which led to the war than by providing out of our abundance concrete symbols of assurance that the Christians of the world have not forgotten their brothers in Germany? How could we more effectively express our faith in the reality of the ecumenical principle? In what other way can we lift ourselves from the position of being an accessory to the crime of Potsdam to our rightful place as members of the body of Christ? A statement which recently reached America from the church at Hannover says: "It is the church toward which all hope is directed now. The only general body which enjoys confidence is the church. People set their hopes on Christians within and without. Come over and help us." Shall that last hope be betrayed? American Christians will give the answer.

## American Legion Memorial Services

EXTENSION OF REMARKS

OF

### HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. WELCH. Mr. Speaker, on Sunday, November 11, 1945, for the eleventh consecutive year, American Legion memorial services were conducted by the Rev. Dr. Paul Little in San Francisco. Dr. Little is now serving his twenty-eighth consecutive year as chaplain of the American Legion and is known and loved by veterans throughout the State of California.

This memorial service was attended by representatives of the Army, Navy, Marine Corps, the WACS, the WAVES, officials of the State, county, and city, as well as diplomatic representatives and legionnaires from the various American Legion posts of the city and county of San Francisco.

Mr. Speaker, in accordance with the permission granted, I submit Dr. Little's sermon, as follows:

#### OF ONE BLOOD

"God has made of one blood all nations of men." (Acts 17: 26.)

Over 1,900 years ago the lowly Nazarene preached and taught world units as the secret of God's Kingdom. He looked upon His kingdom as a world of unity, divinely governed and not a runaway planet. From this unity and the Fatherhood of God there flower certain logical implications, namely, that the earth is the Father's house and the five races are like five brothers, using and enjoying the noble mansion. Because there is a Divine Artist, there is going to be the blossoming of use into beauty. Because there is a Divine Architect, there is a perfect temple. Indeed, individuals and cities, states and races are all under divine guidance.

#### SCIENCE TEACHES UNITY

Mother Nature teaches us unity in all realms of thought. Astronomy echoes the note of unity. The earth goes round the sun not only for us in the Americas, but in Europe, Africa, and Asia. Geology insists upon the unity of the strata, and the layers of rock, sand, vegetable life to low animal, and finally to the era of men, are layers that are reproduced in the same order in all the continents. Physiology emphasizes the unity of the races. The heart is a pump and the blood circulates not only for white men but for mankind in general, be they brown, black, red, or yellow.

No matter to what race the artist belongs, there are seven colors in the spectrum, just as there are eight notes in the octave for all nations. There is no such thing as racial law of electricity, steam, or heat, because the chemical world is one world, the steam and fire always act the same way in all the continents. We have no racial axioms in geometry or mathematics. Two plus two make four in all the countries of the world. The continents are five in number, but the laws of light and heat and gravity are one. The savage has his stone altar, his clay idol, but with education he cries out, as did the cannibal Africanus to Dr. David Livingstone, "I felt Him in my heart; I saw Him in the sky, but I did not know what to call Him or what to say in my prayer." Eventually there is to be a world of unity, one Lord, one Father, one law of love, one golden rule, one hope of a life immortal where the incompletions here will be completed there.

#### MAN, THE GREAT EXPLORER

There is an explorer latent in everyone whose intellect is large enough to have interests outside of himself. It is this element of adventure in us which attracts us to discover or invent things which are now unknown to us. Man is the eternal seeker, the unknown fascinates and lures him on. Our interest centers not in achievement, but in prospect, not in the conquests made, but in the unexplored areas of life. Indeed, life has the charm of the unexpected.

Man has become a creator. He has actually invented a new eye (telescope) which now enables him to see hundreds of millions of stars, some of which are millions of light-years away from us.

Astronomy is an entrancing science; its vastness and infinite variety staggers the minds of the wisest. Now we no longer say "the universe" but rather the "island universes." According to Dr. Edwin P. Hubble, one of the world's great astronomers, the most distant nebluae we have yet photographed is 300,000,000 light-years away.

Of recent years through the medium of powerful telescopes the scientists discovered Antares, which has a degree of brilliance 630 times that of our sun. It has a diameter of about 420,000,000 miles and its distance from us is 370 light-years. As large as Antares is, in 1938 it dropped into second place because of the discovery of a new supergiant star by Dr. Otto Struve, Russian-born director of the University of Chicago's Yerkes Observatory at Williams Bay, Wis. This supergiant star has a diameter of 4,000,000,000 miles.

Man has created another new eye (microscope) through which he sees infinitesimal creatures invisible to the naked eye.

The newly discovered atomic energy is revolutionizing the thinking people. It is for bane or blessing of humanity. At the present the entire world is apprehensive in regard to the use of this mysterious energy. On the one hand, the proper use of it will no doubt raise the level of civilization, and on the other it may mean destruction and chaos.

There is no doubt but that these and multitudinous other man-made instruments have proven themselves to be quite beneficial to humanity. But, regardless of these beneficent influences what we need most in the world today is the fine art of seeing and knowing God. Millions of people have eyes but do not see the things that are visible to the spiritually minded people.

A cold and heartless critic, gazing on one of Turner's gorgeous pictures of the sky, in which God made "the outgoings of the morning and evening to rejoice," said, "I

never see such colors in the sky as you paint." Tenderly but emphatically Turner replied, "Friend, don't you wish you could?"

To some—

"A primrose by the river brim
A yellow primrose is to him
And it is nothing more."

To another—

"Every common bush or flower is aflame with God."

Yes; the most important instrument is the heart, "for out of it are the issues of life." The sublimest thing in all the world is a stainless, unblemished, and incorruptible life.

Nature's law asks no questions and makes no exceptions. Railroads charge most of their passengers full price, some half fare, while some others they give free passes. But there is no gradual scale in the tariffs of God's law. There are no half fares, no rebates, nor free passes. All must pay, and all must pay alike.

"Sow a thought, reap an act;
Sow an act, reap a habit;
Sow a habit, reap a character;
Sow a character, reap a destiny."

MUTUAL TRUST

Just before the war it was our privilege to take a vacation trip, visiting our missions in Alaska over the Arctic Circle tour, which also took us through the Canadian Yukon Territory. When we reached Whitehorse we met our Angelican priest stationed there. Being invited to the vicarage, we noticed that the door was partially open, and to our amazement we noticed that on the table there were several English pounds and coins of different value. Upon inquiry were told that the money was the Sunday's offering, and this was the middle of the week. The priest being a bachelor, he left the vicarage daily to make his parochial visitations and never locked the doors. Curiously enough, we asked him, "Aren't you afraid that someone may come and steal the money?" Calmly he answered, "Not at all. You see we trust people here." Is not that the secret of true brotherhood?

One of the most realistic examples of this mutual trust is the fact that for over 130 years we have been living together in peace with our neighbors to the north—Canada. Over 4,000 circuitous miles, over mountains and plains, rivers and lakes, there is not a single cannon pointing toward the north or the south. If two great nations can live together in peace for over a century and a quarter, why cannot other nations do the same? With our present-day knowledge of the atomic bomb, would we dare subject humanity to another holocaust? God forbid.

It was July of 1942 that we were auditing some lectures at Columbia University, New York City. One night with some friends we were walking on Broadway through crowds of restless people thronging the places of amusements in a vain attempt to escape the black-out, the war, and the thoughts of dismal tomorrows. From amid the crowd came strains of cheering music: When the Lights Go On Again, All Over the World. Coming closer we found the musician to be an old blind man who was making his way down the street as he played. How much greater was the black-out in his life than that of the others on the street, and yet what a difference of hope the inner light had made. How truly the Master said: "He that followeth Me shall not walk in darkness, but shall have the light of life."

From the war which we are just emerging, millions of lives have been sacrificed. Millions of others will be dying of starvation and disease. Mute though their lips be, they are speaking to us today to make their dying worth while for generations to come. Instead of bombs and bullets, let us try brotherhood the world over. Let us preach and teach the philosophy of Him who said "Peace on earth to men of good will."

At the close of the World War I, Earle T. Crooker wrote one of the most telling poems, the title of which is "The Dead Soldier to America":

"I was young, and O God! how I wanted to live!
The whole of my life lay ahead,
But my country was calling me—needed my strength.
I went. Seek me now with the dead.
I was young. All the world was a wine to be quaffed,
Fair love led me on with a smile,
But I died, and you living, who stand in my place
Battle on! make my dying worth while.

"My dreams I lay down on the Altar of Right,
The blood of my youth stains the clay;
Joyousness, music, hope, memory, love—
In an instant I cast them away—
Aye, cast them away with a song on my lips,
Away with a jest and a smile,
But the goddess I fought for is lost in the gloom;
Struggle on! make my dying worth while.

"I followed no laws, save the laws of my land;
My country I took as my bride,
My leader, my lover, the all of my all,
I wedded her, kissed her, and died.
To you who go forward from where I left off,
Though dark be the pathway each mile,
The torch I have lit will yet flame in the sky,
Carry on! make my dying worth while!"

Truly, "God has made of one blood all nations of men." Let us try to keep this God-given brotherhood.

---

## Speech by Secretary of Agriculture Clinton P. Anderson Stresses Importance of Enabling Farmers To Have Full Market for Abundant Production

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. VOORHIS of California. Mr. Speaker, the speech by our former colleague, Secretary of Agriculture Anderson, which follows goes, in my opinion, to the very root of the economic problem not only of the American farmer but of our whole economy. Agriculture can and will, as always, produce an abundance. But the question is whether there will be correspondingly abundant industrial production and employment so that there will be a full and fair market for the farmers' crops. As the Secretary points out:

If scarcity should occur, it will start in reduced employment—reduced industrial employment—not in agriculture.

And the farmer will have to do the best he can to maintain a balance. But what the farmer wants is abundant production and consumption all around. His philosophy is the only one on which real hope for the future can be built. The Secretary's address to the Fiftieth Annual Congress of American Industry follows:

This opportunity to meet with the Fiftieth Annual Congress of American Industry is one that I deeply appreciate. I firmly believe that all groups in our country can benefit mutually by learning to know one another better. This, of course, has been said many times before, sometimes seriously and sometimes as a matter of form. But I mean it—right across the board—because I believe that never before has it been so vitally important for industry, agriculture and labor to close their ranks and move ahead in a broad, coordinated attack on the problem of building a fully productive, expanding economy.

We are clearly at a time of decision. For we are moving, and swiftly, into a new era. In both industry and agriculture we have in our hands the instruments and techniques of tremendous increases in production. That fact is no news to you, and it is clearly seen by farmers. We have to decide—and now—how we are going to utilize that productivity. From the viewpoint of the farmer, the most urgent questions of the times are these: Are we going to have a full-scale production of food and other agricultural products, balanced with a full-scale industrial employment and output? Or are we going to have less than maximum industrial employment and activity, which in turn leaves the farmer no alternative but to achieve the necessary balance with industry by trimming and adjusting his production downward?

There is absolutely no question as to the direction agriculture wants to go. The farmer's main aim in life is to produce as abundantly as he knows how. It has been part of farm thinking in all times to weigh the goodness of the earth in terms of bumper harvests, livestock fattened for market, and well-laden dinner tables.

Agriculture has made the first tangible postwar move toward a full-production economy and a well-fed United States. National farm-production goals suggested to the States just a few days ago call for 356,000,000 acres of crops, somewhat less than the goal for last year, but five and a half million acres more than planted in 1945, and fourteen and a half million acres above prewar average plantings. Farmers are tackling their primary mission of providing plenty of food with all of their capacity and ability.

Full perspective of the hopes for agriculture, industry, and labor in the changing world ahead can be gained only if we look back on the amazing wartime achievements of the Nation. These open our eyes to the abundance that is now within reach.

Personally, I never get tired of listening to the story of the industrial miracles wrought during the war. And I love to tell people about the miracle that agriculture worked. It may have been less spectacular than industry's miracles, but it was just as fundamental. And in some ways it was more difficult.

While industry was adding millions of workers to its pay roll, agriculture suffered a net loss. Out of its 30,000,000 people, agriculture lost 5,000,000 to the armed forces and war industries. While industry retooled, agriculture was unable to get enough new machinery, and often not enough repair parts for its needs. While industry built thousands of new plants and expanded thousands of old plants, agriculture had to be content with merely making better use of its acres, animals, and equipment.

But in spite of the difficulties, farm output was stepped up by one-third. American farmers were able to send one-fourth of their total production to war and at the same time feed our civilian population better on the average than in peacetime.

I consider this a grade-A production miracle.

Now, how was it possible to accomplish this feat? Good weather played a part. So did hard work and ingenuity. I know what many farmers went through to meet the production schedule they had pledged the Government. They put in the toughest and longest workdays of their lives. They patched up old equipment that hadn't worked for years and

will probably never work again. And they not only delivered on their goals year after year, they surpassed them.

Talk about coming in on a wing and a prayer—there ought to be a song about it.

But there was another factor—research. Research that had been in progress for many decades paid off in better plants and animals, better control of pests and diseases, better understanding of soil management and use of fertilizers—in short, bigger and better production.

Let me cite a few examples. You have all heard of hybrid corn. For 40 years agricultural plant breeders have been trying to breed stronger, higher-yielding types of corn. They succeeded so well that the Corn Belt farmer was able to grow five ears of corn on the same land and with the same effort that formerly yielded only four. Here is the importance of that fact: Corn is the most important single basic source of food in this country. The meat, the milk, and eggs on your table consist partly of corn that has been converted by the animal nature of the hog, the cow, and the hen. It was that extra ear of corn produced by research in hybridization that helped the American farmer turn out year after year record-breaking production.

Research paid off big in livestock production. By selective breeding and improved care and feeding it has been possible to build better dairy herds, produce better beef, improve hog quality, and develop better poultry and eggs. Hens used to lay an average of only 88 eggs a year—now they turn out almost 120.

Conservation farming was another big help. This is merely the very practical business of treating every acre according to its individual needs and using it according to its capabilities. By plowing curving rows instead of straight rows on hillsides, by using cover crops, by making better use of lime and fertilizers, by better care of pastures, and other common-sense methods, farmers not only conserved the soil but produced bigger crops with less time and labor.

But the contribution of agricultural research to the war effort was not confined to increasing the production of food and fiber. New methods of dehydrating many kinds of foods were developed. This made possible larger shipments for war in the face of wartime shipping shortages. It played a big part on the Allied battlefields.

The research scientists of the Department of Agriculture developed the "aerosol bomb," a device that was highly important in preventing insect-borne diseases. The "aerosol bomb" is a metal container which emits a fine spray of insecticide that stays suspended in the air, bringing death to disease-bearing mosquitoes and flies. It is impossible to estimate the sum total of American lives saved by this invention, but we do know that 16,000,000 of these bombs were distributed to our armed forces in less than 3 years' time.

And then there was penicillin. Many difficulties had been encountered in producing the mold from which penicillin is made. At the Department's regional research laboratory in Peoria, Ill., were trained scientists to whom growing of molds was an ordinary part of their daily occupation. They found means to produce penicillin on the vast scale required for our military needs.

The farmer has advanced not only in the field of production but on many other fronts. Contrast agriculture today with agriculture after World War I of 1919 and after. The farmer had no Government organization through which he could plan and carry out Nation-wide land use adjustments. He had no Federal policy regarding his prices and income. His credit facilities were inadequate and poorly designed for the needs of farming. He had no soil-conservation policy or program. He was heading into a brief postwar boom—brief as far as agriculture was concerned—which left him with vastly expanded production, the wreckage of a land inflation, and little to show for it except the memory of some very high prices and a mountain of high-interest debt. While industry and business boomed along, for a while, the farmer's prices and income ebbed away. He become a weak spot in our whole economy.

The farmer is different today—far different. He goes into the postwar world of 1945 with his eyes wide open. He is acquainted with the economic forces that regulate his opportunities, and knows from painful experience what happens when agriculture gets out of balance with industry. He has learned to operate with considerable skill the Nation-wide adjustment and surplus handling machinery, built up and tested extensively during the past decade. A national policy of parity prices backs his products, and he has his Government's pledge that the prices of his war-expanded crops will be supported, if necessary, for 2 full years after the end of the war emergency. He has extensive low-interest credit facilities especially designed for different types of farming.

The United States farmer has changed economically, technologically, and financially. Today's farmer is one of the most power-minded enterprisers on earth. He has about 2,000,000 tractors and would like a lot more. His production per worker is twice what it was in 1910, at least one third more than it was in the years just before World War II. Farming has become a $90,000,000,000 industry, with a cash income from sale of products, not counting food consumed at home, now at the $20,000,000,000 mark. That compares with less than $5,000,000,000 of cash income for farmers in 1932. The farmer is using his dollars wisely. He has pared his mortgage debt to a record low of $5,333,333,333, less than half of what it was at the peak in 1923. Farm families have laid by a nest egg of $11,500,000,000 in bank deposits and cash, and nearly $4,000,000,000 in United States bonds.

The farmer is ready to become one of your best customers. He has tremendous unfilled wants—and the money to pay. Farm housing has been running down for more than a generation. Now farmers want to put at least $1,000,000,000 a year into new homes and barns, and on modernization. They want to buy around 200,000 tractors a year for several years to come. They want $1,000,000,000 worth of automobiles and trucks. These are just a few of the items for which they are eager to spend their earnings.

And as I pointed out the farmer has the means to produce, and he wants to produce.

Furthermore, agriculture has made plans to produce. We know what it will involve. We have drawn up production schedules which show how the farm would fit into a postwar economy that is running in high gear. This blueprint of possibilities—looks beyond the immediate transition, and toward what might be accomplished by 1950. It sets up "benchmarks" to measure the potential size of the farmer's long-range peacetime assignment. Thus, it indicates how the farmer should plan his acreage, his feeding schedules, his farm organization, if agriculture is to contribute its complete share to a fully-employed United States.

We know that the country will have changed considerably by then. There will be a population of around 144,000,000 people who will need between fifty-five and sixty million jobs to be fully employed, and who will need a lot more food, and different kinds of food, if they are to be well fed. Such an economy could produce a national income of $150,000,000,000 or perhaps more.

Agriculture would have certain broad objectives and responsibilities in such an economy. Here is a summary of them:

1. Production of plenty of food, at prices fair to consumers and fair to producers, to enable the United States to reach and maintain a truly high level of nutrition.

2. Greatly increased efficiency in production, processing, and marketing of farm products, for the benefit of the farmer, the consumer, and the country as a whole.

3. Accomplishment of a complete job of conservation of our natural resources in the farmer's custody—our soil, our water supply, and our forests.

4. Encouragement of an expanding, free-moving trade within the Nation and between nations, to broaden the base of our economy, provide larger opportunities for employment and consumption, and to aid in maintaining a busy, peaceful world.

We know, through our blueprint of possibilities, the great substance which can be built around these broad objectives. We know that attainment of these goals will require many fundamental adjustments in land use. For example, full employment in our towns and cities would automatically increase or maintain the demand for meat, milk, poultry, and fruits and vegetables. From war experience, we have gained a better idea of how much and what kinds of food workers will buy when they have jobs and good pay. There would be less emphasis on cash grain, oil, and fiber crops. We could expect prices for farm products to be profitable for farmers, but not unreasonably high.

Fortunately for the Nation, the adjustments in acreage necessary to reach our bench marks for 1950 are, by and large, the kind of changes in land use needed for control of soil erosion, in preservation of our watersheds and streams. Those adjustments would steady our aim toward a well-balanced, diversified agriculture that is easy on the land, yet is capable of a steady production of a high-nutrition diet for the United States.

The magnificent possibilities and opportunities in agriculture, like those in industry, augur well for the future. The production and consumption now possible are the seeds of future, long-range prosperity. But the seeds must be planted and nourished; the crop must be harvested.

From the viewpoint of agriculture there are just two alternatives for the future. The first—the one we are hoping and planning for—is that industry, labor, agriculture, and Government will plan and carry out a unified, balanced expansion of production. We want to go up that road that leads to abundance.

However, if the other sectors of our economy drift aimlessly into a defensive position, if they permit unbalanced situations to develop and to throw our national productive effort out of gear, then agriculture would be forced to retreat behind its economic barricades along with other groups. I most earnestly wish that this were not true. I wish that agriculture had only to concentrate on all-out production, without regard to nonfarm employment and industrial activity. But farmers face the cold hard fact that their markets are limited by effective demand, and the demand of unemployed is not effective. If we fail in a full production and full employment program in the cities, the abundance farmers are producing could soon become unmanagable surplus. Then agriculture has no recourse except to use the adjustment machinery it has developed—the same machinery that increased production to meet war needs—to throttle down its output, to seek balance with effective demand.

To do otherwise in a price economy, when the larger part of that economy is restricting, would mean only mountainous surpluses, ruinous prices, and a trail of wrecked farm homes, depleted lands, and blasted lives.

Now let me reemphasize. Agriculture wants abundant production. We are planning on abundant production. If scarcity should occur, it will start in the form of reduced employment, reduced industrial production—not in agriculture. If it should creep into our economy again, agriculture has no choice but to maintain the balance by which

it lives. Furthermore, it should be made clear that in any case, agriculture has to make many year-to-year adjustments to take care of seasonal changes in supply and demand. Even during the war we had to add a bit here or cut down a bit there to meet specific needs. These seasonal shifts should not be mistaken for economics of scarcity—when farmers cut down, say, cotton acreage, to produce more milk and meat, they are simply recognizing that we need more milk and meat and less cotton.

Another part of the farmer's economic machinery which will continue to be used is the ever-normal granary. It has been one of the most useful and successful implements ever devised for agriculture and for the Nation. Agriculture no longer gets the shakes at the prospect of moderate surpluses of various staple crops. We now have the means to handle them: Commodity loans to carry the surpluses over from season to season without depressing the farmer's price, and acreage adjustments to shift the production up and down as indicated. The ever-normal granary supplies of wheat and corn were life-saving in the prewar drought years. During the war they "saved our bacon"—and our beef, mutton, and poultry, too. We ran short of feed in the face of the greatest need for meat we have ever had. Fortunately, the ever-normal granary was full. We drew on it for hundreds of millions of bushels of grain, greatly increasing the output of eggs and meat, and milk. In peace and war, we need the reassurance of some grain in the bin against the time of crop failure or swiftly increasing demand.

In agriculture, we have set our sights high in accepting the challenge of the future. We don't talk about "reconversion" in farming, because we don't intend to go back to prewar yesterdays. We expect to learn much—and to apply it—toward producing foods that will contribute even more to a well-fed, strong America.

As we take stock of our industry and our agriculture, I believe we should be eternally thankful that we in the United States are concerned mainly with problems of plenty. Around the earth others are worrying because they don't know where their next meal is coming from, or how they can salvage an economy that has been utterly demolished or badly torn up. We have in this country fully half or more of the productive potential of the earth. It seems reasonable to believe that the progress and peace of the world will be stimulated mightily if we demonstrate that an economy of abundance is not idealistic dreaming, but a practical workable, common-sense way of doing things.

## Corkscrews and Christmas

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. WASIELEWSKI. Mr. Speaker, during and immediately after World War I we witnessed a splurge on the part of consumers during the so-called silk-shirt era. Men were buying $10 and $20 silk shirts and $10 and $15 neckties. Men and women were indulging in many luxuries. Their enthusiasm to part with their dollars surpassed all common sense and reason.

Today, again, we find a similar situation in vogue. On New York's Fifth Avenue one can pay $32.50 for a child's linen suit, $150 for men's pajamas and matching robe, $95 for a nightgown, $155 for a woman's slack suit, $25 for a cocktail apron, $1,936 for a silver fish platter, and one store advertised a mink coat for a dog at $246 plus tax—see Pathfinder of December 19, 1945, page 10.

The surprising fact is that there are buyers for such items. There are more buyers than there is merchandise and the goods are gobbled up as fast as they are put on the counters.

In the meantime, however, such staple commodities like broadcloth shirts, children's common-sense suits and clothing cannot be found anywhere. Apparently material and labor for the manufacture of frills is available but the sorely needed necessities must stand by. It is suggested the reason the frills are available is because they are not touched by price ceilings, whereas the staple articles are under control in the legitimate markets.

This present spree of spending does not bode well for the future, and would indicate we have not profited from our experience of inflation after the last war. Unless we wake up to the situation ahead we are in for a jolt.

An editor of the Milwaukee Journal recently described his experience in trying to purchase a simple item like a corkscrew, and tells how he found people paying as much as $23 for this kitchen tool. The editor closed his story by saying, "If buying $23 corkscrews is a part of an American Christmas then 'God Bless America,' because we need it."

The editorial appeared in the Milwaukee Journal of December 6, 1945, entitled "Corkscrews and Christmas," and is as follows:

CORKSCREWS AND CHRISTMAS

This is about corkscrews, and it is a highly prejudiced comment because we have been looking for a good corkscrew for many months.

It seems that during the war the corkscrew makers were doing their bit (or bits) making things for the military. Anyway, there weren't any corkscrews in the hardware stores we visited. Finally, we found a corkscrew in a store 2,000 miles from here, but when we tried to use it the handle pulled off. It was a very poor corkscrew.

So we inquired at a nearby hardware store the other day, and the clerk cheerfully showed us a corkscrew. It costs $3.50. We thought we had heard wrong, but we hadn't. We said, "No, thanks! We'll boycott wine or smash the bottlenecks with a hammer before we'll pay $3.50 for a corkscrew."

Readers, we were just babes lost in these times. We didn't know what was coming. More recently we received through the mail, from a store that deals with the masses, a booklet containing Christmas suggestions. It offered a lovely corkscrew for $23.40. You heard what we said—$23.40 for a corkscrew! And there was an icepick for $7.80, a mixing spoon for $11.70, a bottle opener for $9, and a jigger for $15.

We began to feel like a little boy who got into Tiffany's by mistake, looking for a place to spend a penny. The wife turned a couple of pages and came to another jigger. It was priced at $153. That didn't make us feel any better.

We thought of the fact that individual war-bond purchases are lagging. We remembered that the Community Fund and War Chest did not go over a few weeks ago. We thought of the misery in the world, and in parts of our own country.

And we saw six volumes of Carl Sandburg's Lincoln set selling at $150, a cosmetic case for $114, a box of writing paper for $35, a pen and pencil set for $180.

We thought of people complaining of their taxes and the cost of the war. We showed the book of luxury items to six persons and they all reacted as we did. We showed it to a man just back from risking his life on warships in the Pacific and asked him if this was the American Christmas he had been fighting for.

We can't tell you what he said, because the Government would bar our newspaper from the mails. But it made us feel better to find that other people thought $23 corkscrews should be used, not on bottles but to bore into some American heads to find out what is the matter with us. If buying $23 corkscrews is part of an American Christmas, then "God Bless America"—because we need it.

## The Johnson Act

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting a statement made by the late Hiram Johnson, of California, with reference to the proposal to repeal the act of April 13, 1934, known as the Johnson Act:

RETAIN THE JOHNSON ACT

The purpose of the bill under consideration, S. 636, is to repeal the act of April 13, 1934, familiarly known as the Johnson Act. There is no doubt as to the intent of the bill, and there are no qualifications to the terms of repeal. An act which has been an important part of the basic statutory law of the United States of America for more than 11 years is to be completely repealed and eliminated as a part of the law of the land.

We are told that the Johnson Act must go. We are told that the act constitutes an effective barrier to the recovery of the world from the devastation of a terrible war. It is stated the nations of Europe and other areas must have American loans in order to restore their economies and that the Johnson Act stands in the way of providing American dollars and resources for world recovery. The revival of foreign trade is even said to hinge upon the repeal of the Johnson Act. The administration presses for repeal through its many spokesmen and is strongly supported by banking and investment interests and the metropolitan press. They would have us believe that repeal of the Johnson Act is a crucial step which must be taken so that the United States can play a dominant role in the postwar world.

To this proposition I cannot and will not subscribe. I care not what course others may take, but I will oppose repeal of the Johnson Act to the utmost of my strength and ability. I believe that repeal of the Johnson Act at this time is not only unwise and unnecessary but also dangerous to the welfare of the American people who must bear the terrific cost of our war effort. Those who would repeal the act disregard or pass lightly over the fact that its main purpose is to protect the American people from exploitation. The act provides the people a measure of protection, little as it may be, against the unmatched profligacy of an administration committed to apparently unlimited spending and distribution of our wealth and resources abroad and against the

greedy exploitation of international bankers and investment houses. With much of the world bankrupt, or on the verge of bankruptcy, this is not the time to let down such few bars as we have to protect the American people. If the principle of the Johnson Act was valid in 1934—the Nation was practically unanimous in support of it—then its retention is imperative today.

THE LEGISLATIVE HISTORY OF THE JOHNSON ACT

In order to clarify the issue and elucidate my position further, I wish first, briefly, to review the legislative history of the Johnson Act. Only through a clear understanding of the origins of the act and the conditions which gave rise to it can we properly evaluate its purposes and value.

In 1930, I became greatly concerned about the consequences of the foreign-loan activities of this Nation in the 1920's. On December 10, 1930, I introduced a resolution calling for an investigation by this committee (the Senate Committee on Finance) of the sale, flotation, and allocation by banks, banking institutions, corporations, or individuals of foreign bonds or securities in the United States. That resolution was adopted by the Senate, and this committee conducted an investigation, with public hearings, in 1931 and 1932. The findings of such investigation I summarized on the floor of the Senate on March 15, 1932. The investigation developed the story of our foreign loans as a sordid tale, at once grotesque and tragic. It showed how the American people had been duped and exploited by the international bankers with the approval, express or tacit, of the State Department. It was brought out that from 1914 to 1930 nearly $7,000,000,000 of European securities, governmental and corporate, were offered in the United States. About $2,500,000,000 were outstanding, and upon them there was a depreciation of nearly $800,000,000. The American public had invested $1,684,437,000 in cash in the securities of 16 European countries; such securities had depreciated $742,003,000, or 43 percent. For Latin America the picture was worse. The American investment of about $1,600,000,000 in the securities of Latin-American governments had depreciated $1,175,538,032, or 73 percent. (See speech of Senator Johnson in Senate, March 15, 1932.)

It may be of interest to you that in his Presidential campaign of 1932 the late President Roosevelt spoke out boldly in criticism of an administration which fostered such loans. At Columbus, Ohio, on August 20, 1932, he said:

"It was already obvious even to the administration that the forced production of our industry was far too great for our domestic markets. The President had to meet this fact and he did meet it by an audacious and fateful suggestion. We were to sell what he called the constantly increasing surplus. We were to sell it abroad.

"But how could this be done in the collapsed state of world finance? He answered, 'It is an essential part of the further expansion of our foreign trade that we should interest ourselves in the development of backward or crippled countries by means of loans.

"Obedient to this suggestion, the United States, which had already loaned fourteen billions abroad, was lending overseas at a rate of $2,000,000,000 per year. Thus was produced, my friends, the crop of foreign bonds which American investors know to their cost today. The old economics had gone out of business. To the suggestion that mass and machine production ultimately destroys employment, the President simply observed, and again I quote his words, 'This is the reecho of a century ago.'" (The Public Papers and Addresses of Franklin D. Roosevelt, vol. I, p. 672.)

Again, at St. Louis, Mo., on October 21, 1932, he said:

"The next group of obligations comprises what are known as foreign bonds. This is an unsavory chapter in American finance. These bonds in large part are directly the fruits of a disastrous policy pursued by the present administration in Washington—none, other, if you please, than the policy of lending to backward and crippled nations.

"Flagrant instances of the abuse of American investors occurring under this system are well known. When, after my address at Columbus last August, the Secretary of State chose to come to the defense of the administration, his apology was smothered by irrefutable and devastating statements of fact by Senator GLASS, Senator BARKLEY, and many others. The administration has not since attempted to defend the indefensible fallacy of the Department of State with regard to these investments. If we were depending upon these bonds as an integral part of American finance we should be fearful indeed. But fortunately, or unfortunately, as you choose to look at it, the returns on the foreign-bond list have already come in. Many are in default. Others have lost the major part of their original face value. The best that can be said is that that danger is in great part behind us, and not ahead of us.

"I have already announced the policy of my own administration in this regard. My job will be to prevent a recurrence of this incident, to prevent the hard-earned dollars of American investors from being frittered away in foreign fields, with the encouragement of the Federal Government of the United States, and with profit only for certain international financiers whose greed exceeds their patriotism." (The Public Papers and Addresses of Franklin D. Roosevelt, vol. I, p. 826.)

With the convening of the Seventy-third Congress, I introduced, on March 22, 1933, a bill to prohibit within the United States the loan to, or the purchase or sale of bonds of, any foreign government, including any political subdivision thereof which such government or political subdivision was in default in the payment of its obligations to the Government and/or the people of the United States. In the meantime the European governments had largely not resumed payments on their war debts to the United States after the moratorium inaugurated in 1931 by President Hoover. The Senate Committee on the Judiciary reported out my bill favorably on April 6, 1933. Just let me read you what the Judiciary Committee has to say in its report:

"The bill thus reported favorably has been pending before the Senate Committee on the Judiciary for more than a year. It was introduced in the Senate during the last session by Hon. HIRAM W. JOHNSON, of California, immediately after the investigation held by the Senate Committee on Finance respecting foreign securities. That investigation was so recent, and its results so astonishing, that apparently nothing more need be done in demonstrating the necessity for legislation upon the subject than merely to remind the Senate of the disclosures. It is sufficient to say that billions of dollars of securities of certain foreign countries were offered for sale to the American people, with little thought of final payment, and in some instances, with sufficient knowledge on the part of the American intermediary, and the borrower also, that it would be well-nigh impossible for these securities ultimately to be paid. Sums of money to the amount of billions of dollars are now due to the American people upon the bonds and obligations of foreign governments, including political subdivisions thereof and municipalities which have defaulted not only in interest payments but which hold meager hope of payment of any considerable part of the principal.

"These foreign bonds and obligations, of course, in some instances were issued and were sold in good faith, while in some instances the testimony has demonstrated that they were issued by the borrower merely to obtain money, with little expectation of redemption, and were sold by the American financiers to make outrageously high profits, and both had reasonable cause to believe that the American public purchasing such bonds or other obligations would be the ultimate sufferer. The bill was introduced, after the revelations concerning the sale of bonds and other obligations of foreign governments by American financiers and bankers, to prevent a recurrence of the practices which were shown by the investigation to be little less than a fraud upon the American people. The bill seeks, therefore, to make it unlawful to loan money to, or to purchase or sell the bonds or other obligations of, any freign government, including any political subdivision thereof, while such foreign government, or political subdivision thereof, is in default in the payment of its obligations to our people or to our Government. It is a brief penal statute, protective in character. The investigation above referred to, regarding foreign securities, not only justifies the enactment of this bill, but demands it in behalf of the American public. Moreover, much that has occurred since that investigation, and subsequently to the introduction originally of the bill, in the matter of the obligations due to the United States Government from certain foreign governments, emphasizes not only the justice of the measure, but its necessity. It would be unjust to permit the further sale of securities of a defaulting government, the sale of whose securities heretofore in this country have brought distressing loss upon our people, or the further offering for sale of the bonds and obligations of a foreign country able indeed to pay its obligations to our own Government but repudiating its solemn agreements. Thus, because of the facts demonstrated by the investigation above referred to, and because of what has occurred since respecting the nonpayment of foreign debts due to the United States, the bill is appropriate. To curb the capacity of those engaged in the sale of foreign obligations, as an admonition to governments well able to pay but which nevertheless repudiate their written engagements, is its laudable purpose, and it is as well a measure of simple justice for the protection of the American investor and the American people generally" (S. Rept. No. 20, 73d Cong., 1st sess.).

The Johnson Act passed through Congress early in 1934 and was approved by the President on April 13, 1934. It passed the Senate on Janualy 11 but was reconsidered and passed over. At the insistence of President Roosevelt it was amended to drop out the provision about default to the American public so as to apply only to those governments in default to the United States Government, and furthermore Government corporations were exempted from its operation. In the amended form it passed the Senate on February 2, 1934, and the House, under suspension of the rules, on April 4, 1934.

The support of the Johnson Act was overwhelming. There was not even a roll-call vote in either House of Congress. Every step was taken with the knowledge and approval of President Roosevelt. The country was united in barring the American investors market to those foreign governments who would not meet their just obligations to the United States Government. Furthermore the Neutrality Act, beginning with the resolution of February 29, 1936, forbade the making of loans to a belligerent or the purchase of a belligerent's bonds.

Various proposals to amend or repeal the Johnson Act have been made before. In 1940 and 1941, in particular after the war broke out in Europe, the suggestion was made, but no serious effort was exerted, very likely because it was all too evident that the American people would not tolerate repeal. Lend-lease, Export-Import Bank, and RFC lending programs have not changed the restrictions of the Johnson Act, although the spirit behind the act was breached.

WHAT THE JOHNSON ACT IS AND IS NOT

There is so much popular misunderstanding about what the Johnson Act is and does that I think it would be well to point out, even to committee members, what the true facts are.

First, let me emphasize that the Johnson Act prohibits private loans to foreign governments and subdivisions who are in default on their obligations to the United States Government only. That means the nearly 20 foreign governments (Armenia, Belgium, Czechoslovakia, Estonia, France, Germany, Great Britain, Greece, Hungary, Italy, Latvia, Lithuania, Poland, Rumania, Russia, and Yugoslavia) who are in default to the amount of about $11,750,000,000 in their payments to the United States.

Second, the strict terms of the act do not prevent the Government or governmental corporations from loaning money to foreign governments in default on their payments to the United States.

Third, the act places no limitation or restriction on the lending by private bankers, etc., to private persons, corporations, etc., in a country in default on payments due the United States.

THE CASE FOR REPEAL ANALYZED AND ANSWERED

Let us always remember that the basic purpose of the Johnson Act is to protect the American people and their savings from exploitation. For all too long we have been played for suckers by foreign governments and international bankers with the approval, express and tacit, of our Government. Foreign nations have taken advantage of our generosity and our credulity. During World War I and in the decade or so following we poured our money and resources into Europe and other parts of the world. Then came default and repudiation. In 1934 we erected a barrier to protect the American people from further exploitation by denying the American investing market to those nations who would not honor their legal obligations to the United States Government. For 11 years that has been our policy and law in both peace and war.

Now, we are told that conditions have changed and that we must again loan American money and resources to the "crippled nations" of the world and that private capital and savings are necessary in addition to the billions of lend-lease and other forms of Government aid. The recovery of the world, it is said, depends upon American money and goods and the Johnson Act stands in the way of achieving that recovery. The logic is persuasive and the movement for repeal has strong support although I have not discovered any ground swell from the "grass roots" demanding repeal.

What are the conditions that are so different today as to cause us to turn our backs and minds upon the experience of the last generation and repeat—in my opinion the costly mistakes of the past? Nearly everywhere throughout the world we find chaotic economic and financial conditions. It is scarcely an exaggeration to say that much of Europe it bankrupt or on the verge thereof. Assistant Secretary of State Clayton testified before the House Committee on Ways and Means, on April 18, 1945, on the Reciprocal Trade Act extension that for several years after the war most of the other countries will not even have the ability to pay us for anything we send, or have sent them, because they will not have their productive facilities reconstructed so as to produce any surplus goods beyond their own needs. Therefore, he says we must extend them credit so that they can "buy" our goods which they want (hearings on 1945 Extension of Reciprocal Trade Agreements Act, pt. 1 (unrevised), p. 22).

Where do we stand in all this? Need I remind you that we have already spent $270,000,000,000 on war activities since July 1, 1940, and that the Congress has already appropriated $362,000,000,000 for war with the $400,000,000,000 mark soon to be passed? The members of this committee should be fully aware that the national debt has now amounted to $238,000,000,000 in sight. We may also note that our lend-lease aid to other nations now totals $39,000,000,000 with reverse lend-lease only $4,656,315,000. And I noted in the press a few days back that American casualties in World War II had passed the 1,000,000 mark with 227,097 killed.

In my opinion, all of this adds up to the sober conviction that this is the time for caution and restraint rather than plunging ahead with more spending and lending of American money abroad. I do not deny that it is desirable to continue lend-lease aid to England and China for the war against Japan—and to Russia if she will join the war. It may also be necessary for our Government to provide some aid for relief and rehabilitation to certain countries for awhile in the peace period. But let us face the fact that such aid will be gifts. We cannot expect that there will be much in the way of repayment, and we shall be only fooling ourselves if we treat such loans or credits as investments in the normal sense of the word. The decision of whether our Government should provide such aid or in what form and in what amounts can be made by Congress in the full light of publicity. But if we repeal the Johnson Act, there will be no adequate protection to the American public. The bulk of the foreign securities offered in this country to private investors will, in my opinion, be of highly questionable value, and default and repudiation will follow. History will repeat itself and the American people will be losers. With the enormous debt which we now have, neither the Government nor the American people can afford the outright loss of billions of dollars of our resources.

I am aware that it is contended that the Securities and Exchange Commission provides protection to the American investor. But it is clear to me that such protection is inadequate, to say the least, for, actually, the SEC provides no guaranty of the worth or risk of a foreign loan, and it is inconceivable that the SEC will provide much of a restraining influence when the administration is pushing foreign loans with vigor as a part of its postwar program.

It is becoming increasingly evident that the administration's postwar program counts heavily on a large volume of exports to be financed by loans for some years to come. We have the Bretton Woods proposals before us; we have been informed of a $2,000,000,000 long-term loan to France growing out of lend-lease; and we hear rumors of a proposed $6,000,000,000 loan to Soviet Russia, and a huge loan to China for industrialization and river development modeled on the TVA. The fact is that the administration has no answer to the problem of jobs except spending and making loans abroad. Is this not leading directly to a false prosperity similar to that of 20 years ago which burst and left us holding the bag? The world is worse off than a generation ago and grief and loss are inevitable unless we profit from past mistakes and come to our senses. What has happened to the policy announced by the late President Roosevelt in 1932 "to prevent the hard-earned dollars of American investors from being frittered away in foreign fields, with the encouragement of the Federal Government of the United States, and with profit only for certain international financiers whose greed exceeds their patriotism?" Did he not effectively point out the folly of trying to expand our foreign trade and solve our surplus problem by loans to backward or crippled countries?

It has been pointed out that the Bretton Woods program provides for the protanto repeal of the Johnson Act for the nations joining as members of the International Bank for Reconstruction and Development. To my way of thinking that fact is an argument against the bank rather than for outright repeal of the Johnson Act. No wonder so many countries are anxious to join the Bank, have their sins of default and repudiation absolved, and have access to American private capital. We say to the other nations regardless of the reasons why you default your debts, your credit is now good; come to the United States, persuade Americans to cash in their Government bonds, and invest in anything and everything abroad.

As to a $6,000,000,000 loan to Soviet Russia, I do not hesitate to speak my mind. Have you forgotten that the Soviet Government refused to recognize the debts of its predecessors, including a debt owed the United States Government? When our Government recognized the Soviet Government in 1933 it was agreed that existing claims between the two countries would be adjusted by negotiation. No adjustment on the debt situation has ever been made. On November 15, 1944, the total indebtedness of Russia to the United States Government alone—principal and interest—was $443,142,417. For myself, I want no part in an American loan program to Soviet Russia to rebuild and expand a Communist nation which now dominates and controls a very large share of Europe and Asia, and I believe that the American people should be protected against such a program. The Johnson Act provides some measure of protection.

CONCLUSION

My position on the question of repeal of the Johnson Act is clear and unequivocal. I am absolutely and unqualifiedly opposed to repeal. I am thinking of the interest and welfare of the American people. The Johnson Act provides a measure of protection to them and their savings. This Nation has apparently gone mad in its policy of distributing American money, goods, and resources throughout the world. The Johnson Act stands out almost alone as a protection to the American people from the give-away complex. Let us keep it there as at least one measure devoted to preserving our American birthright for the American people. If the time comes when the other nations of the world will recognize and acknowledge their just obligations to us, and make sincere attempts to repay them, then we should consider repealing the Johnson Act. But the conditions of uncertainty, disorder, distrust, and near bankruptcy prevailing today make retention imperative.

---

## The Plan of Galilee

EXTENSION OF REMARKS
OF
**HON. W. O. BURGIN**
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a little poem by Rev. W. L. Hutchins, of Lenoir, N. C., a friend of mine over many years, entitled "The Plan of Galilee." May I commend it to the membership of this House and to all of the faithful everywhere:

THE PLAN OF GALILEE

We've tried plans and pacts and charter—
We have watched the nations barter—
We've surrendered our convictions to the scheming of Big Three;
And still the dove is flying
O'er all capitols still sighing
Because we've never tried the plan of Galilee.

Unnumbered hosts are praying;
Fervent souls forever saying;
Guns and bombs and conscript soldiers cannot make a nation free.
We will hate and maim and slaughter
Valiant son and virtuous daughter
Till all nations try the plan of Galilee.

O Christ who came to guide us;
Come again and stand beside us;
Speak Thy word to wrangling nations: "Know My truth—twill set you free."
Let it sound like angels singing,
Christmas bells forever ringing,
Calling us to peaceful service through the plan of Galilee.

## The President's Message on Merger of the Armed Forces

EXTENSION OF REMARKS
OF
### HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. LARCADE. Mr. Speaker, I think the message of the President in regard to the merger of the various branches of the armed forces is most convincing and, under leave to extend my remarks, I wish to have reproduced the editorial on the subject which appears in the Washington Post of even date, as follows:

NATIONAL DEFENSE

The chairman of the House Military Affairs Committee a month or two ago said he did not know how the two armed services could merge. Three-quarters of a century ago the same wonder was expressed in connection with the problem of resuming gold payments. On that occasion an immortal answer came quickly: "The way to resume is to resume." Without further ado this country returned to gold payments. President Truman supplies a similar answer to the tearing hubbub over ways and means to consolidate the armed services. The way to merge is to merge—that is to say, create one department out of two, make one secretary instead of two. That is the start and the details of organization will follow as a matter of course.

The President's message to Congress asking it to legislate a single department is clear and cogent. In this case the facts spoke for themselves. Nobody is in a better position than Mr. Truman to know those facts. As chairman of the Senate War Investigation Committee, Mr. Truman had paraded before him instances of the waste in time, money, and lives entailed by divided command. No unity existed at the top, precious little of it in the theater commands, with the shining exception of General Eisenhower's. It was the demonstrated worth of the Eisenhower system that made this newspaper a proponent of comprehensive unity. Admiral King says the Joint Chiefs of Staff is unified command. With due respect to his former position as one of the joint chiefs, we beg to disagree. It was committee command—a very different thing. The committee came to most decisions by compromise and communicated with theater commands by a kind of hortatory presentation. In the field itself, separatism and a corroding jealously were rampant. Our command situation in the Pacific was so bad that in dealing with other services the theater commander had to transmit orders through the Joint Chiefs. In this respect, thank heaven, the interservice rivalry of our enemy was worse. Mr. Truman in a magazine article in August 1944, reviewing this state of things, concluded that "a divine providence watches over the United States."

There is almost a solemnity in the way that the President stresses the need in the dangerous days to come of a single department. Navy spokesmen plead that this would mean too much power lodged in one person. It is a specious argument. This country has one Secretary of State with enormous powers. It has one President with a power that has never been exceeded by any despot in any country. Mr. Truman gives the power argument short shrift. "The safety of the democracy of the United States," he says, "lies in the solid good sense and unshakable conviction of the American people." As long as we remain a responsible people, there is no danger in delegating responsibility. It is divided responsibility that we must guard against. It is responsibility to the entire Nation that we must insure. In this air age the committal of our national defense to two Departments, one for the Army and the other for the Navy, is a contradiction in terms. The national defense is one and indivisible. "When the Military Establishment is divided between two civilian Secretaries," as the President says, "each is limited necessarily to a restricted view of the Military Establishment." He becomes a partisan for his service. The interservice squabble over unification headed by the respective Secretaries stands out in proof of the President's point.

The scheme offered by the President is of necessity sketchy. But it profits, in our opinion, from the bitter debate that the country is witnessing. Under a Civilian Secretary of National Defense, there would be a civilian Under Secretary and several civilian assistant secretaries. The Department would contain three branches for land forces, naval forces, and air forces. Air, under the President's plan, would not swallow naval aviation, as the officers on the aviation side of the Navy have hitherto feared. It was a just fear, but the President would safeguard naval aviation by including it in the Navy branch. Nor does the President give any comfort to those extremists who want to see the armed services in one bastard uniform. There would still be differentiation, and the Marine Corps would still be continued as an integral part of the Navy. No traditions would be lost, no corps d'elite broken up. The integration would be at the top, as it should be, and there would be one Chief of Staff who, it is suggested, should be a rotating appointee from all the three arms.

With this blueprint we hope Congress will go to work. As for the armed services, the time has arrived for them to put away their shillelahs and cooperate in making a workable organization. Our national defense is entering upon a new stage as the result of the invention of new weapons. It requires new habits of thinking throughout the departmental structure, and these are possible only by the prior creation of a single Department of National Defense. Let us have it.

## Poor Treatment of War Veterans by National Housing Administration

EXTENSION OF REMARKS
OF
### HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. WEICHEL. Mr. Speaker, the National Housing Administration gives much talk and publicity covering housing for war veterans. It seems to be nothing more than lip service, for those who are employed by the National Housing Agency seem to care little for the wants of the veterans.

On October 3, 1945, I directed the following letter to the Administrator of Fairlington at Arlington, Va.

OCTOBER 3, 1945.

ADMINISTRATOR OF FAIRLINGTON,
*Arlington, Va.*

DEAR SIR: With reference to the above naval officer, who is married and has two children and who has just returned from a tour of duty of more than 19 months at sea, I would kindly ask that he be given priority in receiving accommodations in Fairlington. He has been unable to secure accommodations here in Washington since the latter part of July. Therefore, will you kindly give him the priority extended to those who are in the armed service in securing accommodations in Fairlington.

Will you advise me?

Sincerely yours,

ALVIN F. WEICHEL,
*Member of Congress,*
*Thirteenth Ohio District.*

This housing project was built with Government money and under the jurisdiction of the Defense Homes Corporation, and all the stock is owned by the United States Government.

Yet up to this time the Government agency did not answer my letter for housing this war veteran. Those who are in charge of Government housing care little for the wants of veterans or anyone else. They are only concerned with their own comfort.

With such conduct by bureau officials, should Mr. Blandford, National Housing Administrator, be entrusted with housing for war veterans?

With no attention paid to veterans by public officials who have charge of houses erected with public money, what can the veteran or anyone else expect from further expenditure of the taxpayers' money for public housing, operated by Mr. Blandford and the National Housing Administration.

## Building and Construction Trades Department, A. F. of L.

EXTENSION OF REMARKS
OF
### HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BUILDING AND CONSTRUCTION
TRADES DEPARTMENT,
AMERICAN FEDERATION OF LABOR,
*Washington, D. C., November 29, 1945.*

*Presidents, National and International Unions; Secretaries, State and Local Building and Construction Trades Councils Affiliated With the Building and Construction Trades Department, A. F. of L.*

DEAR SIRS AND BROTHERS: During the war period the building and construction trades workers affiliated with the building and construction trades department of the American Federation of Labor rendered a service to their country that has been acknowledged by

high Government officials and the public in general.

Stoppages of work were held to a minimum and far below those of any other branch of our industrial life. Heads of the Navy and the War Departments have publicly commended us for the service we rendered. However, in spite of this service, we are in grave danger at the present time of being penalized through the efforts of those who have been consistently opposed to any form of organized labor. This danger lies in the enactment of legislation by Congress which would retard any benefits that we might obtain through our present right to strike.

To the reasonable and well-thinking people affiliated with organized labor, it has always been recognized the right to strike should not be used until after all peaceable and orderly means had been used and failed to result in settlement.

After World War I, those of us who were active in the labor movement at that time, realized the concerted effort that was made to tear down conditions that had been established by organized labor, after many years of efforts and sacrifice. The same thing is being attempted today by certain corporate and financial interests, but it is taking a different form. They have profited by their mistakes in the past and are trying to accomplish the same purpose by other methods at the present time. Those of us who were active in the building and construction trades department during the war period witnesses many instances where corporate and certain vested interests had their representatives in high governmental administrative positions. Some of these men were absolutely necessary and essential to the prosecution of the war. However, there were instances where they did, through the prestige of their position, hurt organized labor and further the interests of corporate business. These things are natural and will be repeated from time to time wherever the human element has a chance to exhibit itself. All we can expect to do is to curtail and correct such action wherever possible, as we are still under war emergency Government regulations.

Everybody realizes that during the war period living costs have increased far beyond the increase of hourly wage rates and those American workers who work on an hourly basis, after having their overtime pay income taken away from them, through the reduction of the hours of work, still have to meet that high living cost with a decreased income. This justifies demands for increases in wages.

The methods of obtaining such increases is a matter in which organized labor will have to exercise the greatest caution.

We in the building trades, through the functioning of the wage adjustment board, have been very fortunate. Whatever faults may be attributed to this board as a general over-all picture it has produced very good results under the conditions. This does not apply to other industries, such as automotive and steel. The recent trolley strike in the city of Washington is an example, when the public was informed that a labor organization had violated the terms of its contract. This strike was used to provide a demand for vicious antilabor legislation on Capitol Hill. Much of this legislation has been drafted, such as the Ball-Burton-Hatch bill, and there is much more antilabor legislation in the offing.

Daily we listen to the ranting of certain Members of Congress who have been consistently antagonistic to organized labor. This type of Member in Congress, who at the least provocation is willing to draft legislation and introduce it, would hamstring organized labor and restrict its right to strike. If the right to strike is taken away from labor, as the final protective right that we have enjoyed and the only one through which we have been able to obtain results and make any progress, then organized labor is doomed. It is for this reason that the greatest caution should be used in the exercising of our right to strike.

The only bad spot on the horizon, as far as the building and construction trades are concerned, is the age-old one of jurisdictional disputes in which our affiliated unions in many instances do not follow the machinery set up within the Department for the purpose of adjusting their disputes without a stoppage of work. No matter what the failings of our system may be, we urge upon all affiliated unions that they use every effort at this time to prevent any stoppage of work due to a jurisdictional dispute with other crafts. If this is done during the period of this unsettled condition throughout our country we will be able to appear before committees in Congress when hearings are held on these proposed antilabor bills and show that the building trades do not inconvenience the general public by jurisdictional disputes causing stoppages of work and, further, that we have always been and are continuing to live up to the provisions of our contracts with our employers. At no time in the history of our movement has the above recommended action been so necessary as it is at the present time. This can be easily verified through the representatives of international unions who are on the job here in Washington and who have their finger on the pulse of things that affect our interests.

Again may we reiterate that all affiliated organizations use every effort at this time to prevent any stoppage of work due to a jurisdictional dispute or stoppage of work that may be construed as a violation of any of the provisions of the contracts you have with your employers.

Fraternally submitted,

HERBERT RIVERS,
*Secretary-Treasurer, By order of the Executive Council of the Building and Construction Trades Department.*

---

## A Soldier Opposes Military Conscription

EXTENSION OF REMARKS
OF
## HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of ex-Staff Sgt. James F. Donnelly before the House Military Affairs Committee:

Mr. Chairman and members of the House Military Affairs Committee, today we hear from those advocating compulsory military service that it is necessary for the preservation of the American democratic way of life, for the future security of our country, and for the establishment of world peace.

The democratic ways of life must be preserved, but they are not the ways of the Army. It it's a choice between freedom of speech and Army regulations, freedom of speech will have to wait. Millions of soldiers and sailors cannot speak out openly in opposition to compulsory military training. And the violation of this constitutional right threatens to destroy the very foundation of our American way of life.

While overseas I heard of a great many speeches by high-ranking Army officers in favor of peacetime training. It seemed to me to be unnecessary and a very alarming and dangerous departure from American democracy. I decided to do what I could to oppose it.

As an American citizen, the very first thought that came to my mind was to write to my Congressman. After discussing this with one of the company officers I was told that according to Army regulations I could not write to any Congressman against the proposed bill of universal military training. Nevertheless, I enclosed an article written to the editor of the Christian Science Monitor in a letter to Senator HAWKES, of New Jersey. This letter was returned to me with the following rejection slip:

"This letter is returned to sender because violation paragraph 5 AR 600-10 dated July 8, 1944, which prohibits any person in the military service of the United States to procure personal favor through legislation.

"THEATER CENSOR."

COMPANY B, TWENTY-FOURTH MEDICAL BATTALION, APO 24, CARE OF POSTMASTER,
*San Francisco, Calif, January 21, 1945.*

Senator ALBERT W. HAWKES,
*Senate Office Building,*
*Washington, D. C.:*

You will find enclosed a copy of my letter sent to the editorial department of the Christian Science Monitor.

I feel rather strongly about this proposed bill of compulsory military service for the youth of America. Unfortunately these boys are now too young to speak for themselves. It is our responsibility to see that they have some kind of a peaceful world for the future.

Should the United Nations fail to cooperate with us we can always pass a military training law. But at this time it doesn't seem advisable.

Please give this your serious consideration.

Very respectfully yours,
Staff Sgt. JAMES F. DONNELLY.

P. S.—Will one of your secretaries kindly acknowledge the receipt of this letter if it arrives safely. My home address is 130 Chestnut Street, Boonton, N. J.

---

Staff Sgt. JAMES F. DONNELLY,
*ASN 12029653, Company B, Twenty-fourth Medical Battalion, APO 24, care of Postmaster, San Francisco, Calif.*

*To the Christian Science Monitor:*

On the fighting fronts of the Philippine Islands many of us are giving serious thought to the proposed legislation of compulsory military training of all young men during peacetime. We are at a loss to understand why this bill should be hurriedly enacted instead of taking its proper place at the postwar peace conference of Allied Nations.

This proposal of military conscription seems to be an admission of defeat of the very things we're fighting for and a basis for preparing World War III.

At the peace conference we can definitely decide whether or not our allies are planning to have military training service, before starting the old round of national military competition which makes another war inevitable.

We know from bitter experience that the United States cannot have peace without close cooperation with other nations. And it is now only reasonable to assume that this opinion is held by other peace-loving nations. They, too, are anxious after years of bloodshed to help maintain peace and some international order. Providing, of course, that we—the greatest Nation of the lot—are willing to set the example.

Some advocates of postwar military training are not content to wait—could it be that under the pressure of war emotions, they see the best chances for its quick enactment? Yet, I'm sure our representatives are not going to allow any pressure group with obvious interests in particular solutions to rush a conscription law that might jeopardize the future peace of the world.

If we are instrumental in starting this competitive armament race, of which mili-

tary training is undoubtedly a part, we might just as well scrap all our peace plans.

The loud cry of today is that Germany is even now planning a third world war—but this time Germany is not only to be defeated but also to be disarmed. Germany and Japan could not have secretly rearmed themselves if the Allied Nations had not supplied them with the necessary materials for their huge war machines. Prevent this accumulation of military power and you take the very heart out of war and make future acts of aggression impossible.

The future of our world must be fanatically devoted to the preservation of world peace, long before that peace or we ourselves are ever directly threatened. In other words, we must "Remember Pearl Harbor" by asking ourselves: "What caused Pearl Harbor?"

Let us first win this war before passing laws to conscript the youth of America for another war. Let us first definitely find out what plans our Allied Nations have for world-wide disarmament. We cannot approach the postwar peace conference with the law of compulsory military training and expect other countries to disarm—our allies, Great Britain, Russia, and China would have no alternative but to do likewise. The passage of this compulsory military training bill must definitely be postponed until after the war.

The office of the Judge Advocate General stated that in the future, under threat of court-martial, I could not write anything against compulsory military training according to Army Regulation 600-10, paragraph 5, which provides that "except as authorized by the War Department efforts by any person in the active service of the United States * * * to procure or oppose or in any manner influence legislation affecting the Army * * * are forbidden."

This paragraph and others of this regulation are subject to very broad interpretation by the Army. In fact, to quote from an Army newspaper: "The War Department Bureau of Public Relations has interpreted the term 'public presentations' to include letters to the editor. When Army personnel writes or talks for the public they (according to the paper) are representing the Army. Under no circumstances does the Army comment publicly on any controversial subject."

Besides an American daily paper carried an account which reveals the lack of freedom to speak on the part of Army officers. The New York Times of December 15, which reported the Army-Navy merger debate, said: "Mr. Hensel (Assistant Secretary of the Navy) said that he would not feel free to oppose it as a member of the administration, and that he did not think any officer in uniform could argue against the views of his commander in chief."

To mail my letter through regular Army channels was quite impossible. On the other hand, I was determined to get this letter through to my Congressman despite the therat of a court-martial and despite the fact that I was to be called up for questioning before the Army intelligence—G-2. First of all, I contacted one of our regimental chaplains, but he considered it "too hot to handle" and stated that the decision of the theater censor was final. I contacted another chaplain, who said that, insofar as he was concerned, the Army could not deprive me of my rights as an American citizen. He placed his censor's stamp on the envelope. Instead of sending this letter to the Senate Office Building, I mailed it to the Senator's home and simply addressed him as Mr. on the envelope. Otherwise this letter would have been again picked up and brought to the attention of the theater censor. This letter reached its destination, but only in this manner and not through regular Army channels.

This action of the Army is clearly a violation of all constitutional rights belonging to an American. Millions of GI's are deprived of one of the "four freedoms" for which we were told we were fighting. Many soldiers have from time to time voiced their opinions against this suppression of freedom of speech, but all to no avail. For the first time in my life I found out what it meant to be deprived of this right. And I vowed that if ever again I had that freedom I'd do everything to preserve it in America.

Our democracy affords the right of the common man to be heard—militarism denies that right. And now that I'm again a civilian I can stand without fear of Army regulations before you gentlemen, the Congressmen of the United States, and exercise this priceless heritage—"freedom of speech." This is what I fought for, and any true American would be proud to give his life for this freedom.

I sincerely believe that if this Army plan for compulsory military training, or any compromise plan, ever becomes a law, that sooner or later all Americans will be deprived of freedom of speech under the control of a military state. The Army will become a dangerously supreme authority, will dictate terms to our legislative bodies, and will eventually take over complete control of our Government. Before it's too late let us recognize this universal-training bill for what it is—the military leaders' bid for power. And it is much more dangerous than we can possibly imagine.

While in the combat area of New Guinea and the Philippines I discussed peacetime conscription with hundreds of fellow soldiers. The vast majority of them were against compulsory military training. In fact, when I wrote the article and the letter to my Senator that were returned to me, 93 percent of the men in my company would have gladly signed that letter if a petition had at all been possible—5 percent were undecided. As for the opposing 2 percent, they were made up of the officers in the company.

From everything that I've heard, and I have been in the Army among enlisted men for 4½ years, I'm at a loss to understand how any poll can report that the majority of veterans favor this proposed bill, when, in fact, they're definitely against compulsory military training.

While on the subject of polls, I want to suggest that I believe the Gallup poll is definitely partisan on this subject of conscription. Mr. Gallup himself stated on November 20: "In the House Military Affairs Committee the peacetime training bill has taken on a partisan aspect, a group of Republican members having last week moved unsuccessfully to delay consideration of the measure." While he criticizes the opposition, I have yet to hear him say anything against those supporting conscription. In view of such partisanship, we can do well to pay more attention to the Town Hall Meeting of the Air poll on the subject of universal military training—of the votes received through the mail—11 percent were in favor and 89 percent were against military conscription.

Basically, the veterans and the American people do not want conscription because when faced with properly worded alternatives they will vote for the alternative every time. There is more to public opinion than a "yes" or "no" answer to a question the poll experts have carefully worded. For example, Congress and the people should not be asked just the simple question, "Do you favor a year of military training for every young man?" But, with properly worded alternatives, such as, "Do you favor the world-wide abolition of military conscription?" and "Do you believe that it is better for security purposes to rely on world organization rather than on a conscript army?" This is the only way for the polls to find out definitely that the American people are against military conscription.

As Americans, it is the duty of each and everyone of us to preserve democracy. Democracy is not militarism. Compulsory military service is absolute militarism. The two cannot possibly exist together, for sooner or later one will destroy the other. We saw what happened in Germany, Italy, and Japan when the military leaders took over—when they no longer wished to be subordinate to the civil authority. It can happen here.

Militarism can grow to such proportions that we'll never be able to control or stop it. Why even today military leaders have grown so powerful that they no longer are satisfied with voluntary enlistments but dare to command that it shall be compulsory for all young men, and possibly very soon for all young women in America.

Before arriving at a decision on this dangerous bill of conscription, let us do everything possible to abolish compulsory military training throughout the world and bring about some form of world disarmament and international peace. The Martin resolution and the Neely resolution now before the House propose just this and should be given very serious consideration.

During the next 5 years at least we'll have the veterans of this war to make up a splendidly trained reserve—besides a large standing voluntary army ready for any emergency.

These 5 years can be devoted to all-out international peace efforts. During war the military leaders insist on all-out for victory; during peace we should insist on "All-out for peace."

America leads the world—if we propose to abolish compulsory military training throughout the world—it shall be abolished. If we choose rather to enact such legislation—it will mean inevitable war. Other nations will be forced to follow our example, and may further endanger our security by forming powerful blocs in efforts to equal our military strength in another mad armament race.

We can lead the nations of the world into the ways of peace or into the ways of war—the decision is for us to make.

I would like to ask the proponents of compulsory military training this question: "What objections they have against trying to abolish compulsory military training in all nations, before the consideration of such legislation?"

In conclusion, gentlemen, it seems to me that compulsory military service is not necessary at this time; it cannot exist alongside of our democratic way of life; it will jeopardize the future security of our country, and it will wreck the establishment of a just and durable peace for the world.

## Farmers Should Have Their Former Homes

EXTENSION OF REMARKS

OF

### HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks, I want to say in the sale of surplus property former owners have been given preference in the purchase of ships and other property, but farmers have not been given such first right to get back home farm lands.

Thousands of farmers were forced to give up home farms for the use of war plants.

Now these lands are sold as surplus property.

Mr. Speaker, such former owners should have the first right to purchase back these home farms from the Government.

I have introduced the following bill:

A bill to provide that former owners of farms and other real estate shall have the first right to purchase their former homes now being sold by the Surplus Property Administration

Whereas the Government in prosecuting the war effort has taken by condemnation and otherwise large areas of lands throughout the United States;

Whereas these lands were the homes of farmers and other persons for many years; and

Whereas such lands are now being declared surplus: Therefore

*Be it enacted, etc.*, That the Government in the sale of surplus lands give the former owners the first right, opportunity, and privilege to purchase any such lands heretofore taken by condemnation or otherwise and used in the war effort, and now or in the future declared surplus.

## A Postwar Project

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. ANGELL. Mr. Speaker, pursuant to leave heretofore granted I include the following editorial appearing in the Oregon Daily Journal December 15, 1945, in the extension of my remarks:

A POSTWAR PROJECT

High waters in the Columbia, Willamette, and their minor tributary streams bring yearly down from the hills and upland fields vast tonnages of Oregon's richest soil. The rivers showed yellow with their burdens of silt washed down by the early rains and sluiced into these main arteries toward the sea. We see this phenomenon year in, year out, with each succeeding season of freshet.

What becomes of this silt? What happens to the lands from which it came? The answer to these questions indicates one tragic thing—waste and destruction. The mountains are being brought low, the meadows and rich acres upon which the people depend for their sustenance are being trenched and gullied, eroded and laid bare—in some instances down to the bedrock.

The soil thus filched from the highlands is carried far away—ultimately to the sea, where it is dispersed along nameless shores or mixed with the coastal sands and built up into new bars or low capes that jut out from the mainland, to be scattered again by shifts of wind or ocean current—waste.

Now that war is ended, new efforts should be taken to control some of this destruction of the land. Limitation of logging in areas where tree roots once held the ground against erosion; more scientific contour plowing of farms so that furrows should not become down-sloping watercourses to carry off, rather than retain, soil; restoration to pasture of some of the once-great ranges on which millions of cattle grazed but which were made into dust bowls by long years of intensive cultivation—these would have the twofold blessing of creating employment and of checking destruction.

By the very nature of things, all erosion cannot be checked. No one could hold back the torrents that leap from mountain cliffs and gouge out pools and trenches in their downward rush. But by means of the great dams now being projected to hold back some of the waters in time of flood, the establishment of big and little lakes here and there, the control in the cutting of forests, the more intelligent methods of drainage and irrigation, some of these destructive forces which stem back to America's industrialization can be regulated in some degree. The longer these lands can be kept fertile and in full production the further away will be kept the danger of famine—for erosion means nothing less.

## Not Unduly Exacting About the Law—II

EXTENSION OF REMARKS
OF
### HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mrs. LUCE. Mr. Speaker, several days ago, in calling the attention of my colleagues to two chief influences now affecting our basic concept of law, I noted that the most immediately powerful is the doctrine of "mass guilt," as accepted by Mr. Justice Jackson of the Supreme Court of the United States.

The second influence may, however, prove to have challenged more fundamentally our traditional belief that law is properly a protection for and a responsibility of the individual human being in his relations with his fellow men. This second influence, as exemplified by the Soviet theory of jurisprudence, is that law is based on shifting economic dogma, rather than on absolute moral principle. The Soviet conception is that a legal code is a device for the imposition of the theory that the state is superior to the individual in every act of life, and, that as against the state, no individual has recourse.

It is noteworthy that few of our informants about the Soviet Union, who plead that "we must understand the Russians," provide a clear picture of the legal aspect of Soviet life.

Legislators and lawyers, as well as many laymen, are, therefore, grateful to Mr. Charles Prince, of the Washington, D. C., bar, for his résumé of the history of Soviet jurisprudence as published in the November issue of the American Bar Association Journal.

THE EVOLUTION AND CRISIS IN SOVIET JURISPRUDENCE

(By Charles Prince)

(In this brief statement an effort is made to summarize the evolution of the Soviet concept of law during its various stages of development between 1917 and 1945, and to suggest probable reasons for the present theoretical crisis in Soviet jurisprudence.)

I. REVOLUTIONARY CONCEPT OF SOVIET LAW 1917–21

During the initial years of the revolutionary period the Soviet concept of law was postulated on the premise that the October revolution of 1917 completely destroyed the old economic, social, and political relations, and by substituting a new society for the old one, in virtue of the sovereignty of a revolting people, has transferred the state authority in Russia to a new (different) social class. By so doing it was deemed to have severed the continuity of all obligations which were essential to the economic life of the social classes which have disappeared.

Moreover, the initial Soviet concept of law was predicated on transitional socialism. Soviet theorists argued that the proletarian revolution had for the first time in history created a socialist state of workmen and peasants. In concert with popular propaganda, Soviet academicians glorified the Soviet regime as the highest type of state—"that of the dictatorship of the proletariat." During that period Soviet jurisprudence was permeated with this transitional character, namely, that the new form of state, the Soviet Republic, aims toward abolition of classes with their antagonistic interest, and that law will disappear as the state withers away. Soviet legal writers hastened to point out that the state of dictatorship of the proletariat will continue during the first phase of communism, that is, socialism. The withering away of the state per se will begin only in the second, higher phase—communism. Thus, during this transitional period from the revolution to socialism and onward to communism, there was no need to develop a socialist theory of law nor to codify cumulative experience.

Since Soviet legal institutions were of a transitional character, there was no need to establish continuity or any degree of permanence, so far as new socialist legal concepts were concerned. Consequently, the most important characteristic of Soviet socialist law was, and in a large measure still is, its revolutionary creative force. It should be noted that government by decrees is in the year 1945 still an outstanding characteristic of the dictatorship of the proletariat, of the Stalin regime, as it was in the early days of the October revolution when Vladimir Lenin guided the destinies of Russia.

II. THE NEP PERIOD, 1921–29

Lenin and his associates took cognizance of and soon recognized the urgent need for evolving a new civil code of law. This was evidenced by the decree of August 9, 1921—promulgating the new economic policy (NEP)—which was ushered in as a temporary method of reviving light industry and trade destroyed during the revolutionary period (war communism) and by the civil war. The NEP envisaged the temporary development of private industry and trade until the government should be able to supply the needs of the country. In fact, the NEP made certain concessions to the very principles against which the October revolution was directed; namely, individual control of means of production, individual profit from such control, individual employment of labor, and private trade for individual profit. The NEP also reestablished a new and reasonably stable currency, on the basis of which a comprehensive system of taxation was introduced. The greatest concessions of the NEP were made to the peasants for whom individual tenure and exploitation of the land were again permitted, with the right to trade in surplus production after the payment of taxes. Instead of having to sell all surplus products at state-fixed prices, the peasants paid a tax, first in kind, later convertible to currency, and finally paid exclusively in rubles.

* * * * *

Russian exponents of Soviet law contended that the Soviet Government is not seeking to abolish personal property, which is generally classified as consumers' goods, but is definitely opposed to private property. They are opposed to privately owned means of production which may be turned to the exploitation of labor.

Swayed by constantly dynamic changing conditions brought about simultaneously by external attacks, revolution, and civil war, Soviet legal theorists were confronted with the problem of how to find a common de-

nominator for the essentially divergent sets of social and economic relations. If the objectives of the NEP were to be materialized in any appreciable manner, Soviet legal institutions would have to be reoriented. Accordingly, the initial concept of Soviet law as an automatic reflection of given economic facts had to be temporarily discounted and substituted by the concept of law as an instrument used by the Soviet state with the object of transforming the existing economic relations. As a result of this politico-economic expediency, the "commodity-exchange conception" of law and the theory of the "immediate withering away" of state and law had to be temporarily dropped. This phenomenon made confusion all the more confounded among students and teachers of Soviet law alike. The usual question asked during tha period was: Why study law since it will be gradually discarded as the state withers away?

When the NEP period had achieved its purpose, it was ruled out of existence and by the decree of May 21, 1932, the NEP was finally abolished, specifically forbidding the opening of stores and shops by private traders.

*The Soviet penal code*

Characteristic of the Soviet concept of law (government by decree) was the Soviet penal code. The general principles of the penal policies of the Russian Soviet Federative Socialist Republic (RSFSR) were brought into force by the decree of All-Union Central Executive Committee of November 22, 1926, and subsequent amendments up to December 1, 1932. In view of their significance during this period, reflecting internal activities of the Soviet regime, articles 6 and 8 of the penal code merit quotation:

"Art. 6. Every act or omission is considered socially dangerous which is directed against the Soviet regime, or which violates the order of things established by the workers' and peasants' authority for the period of transition to a Communist regime.

"Art. 8. If a particular act is a crime within the meaning of article 6 above at the moment when it is done, but by the time it comes up for investigation or trial it has lost its socially dangerous character by reason of a change in the penal law or in virtue of the mere fact of the alteration of the social-political situation, or if the person who performed the act cannot now, in the opinion of the court, be considered socially dangerous, the act shall not render the person who performed it liable to the application of a measure of social defense."

Of equal significance is also the decree of the Central Executive Committee of the USSR to to supplement the decrees promulgating the penal code of the RSFSR regarding crimes again the state (counter-revolutionary crimes and crimes against the administration which were particularly dangerous to the USSR) by articles of treason to the fatherland. "Death by shooting and confiscation of the whole of the offender's property" were characteristic provisions of this code which was announced on June 8, 1934. The study of Soviet criminology and the administration of criminal law seem to have always been very popular among students of law in the Soviet law institutes. Latest reports indicate that the basic task of Soviet criminal law appears to have remained the same; that is, the protection and development of socialist society.

Moreover, the peculiarities of Soviet jurisprudence are particularly prominent in the criminal law. This phenomenon stems from the fact that in philosophy and in methodology, and especially in actual administration of justice, the integrity and significance of the individual human being is subservient to the welfare of the state; more specifically to the governmental machinery of the regime. Hence, Soviet judges are not bound in any way by the written law nor by previously established principles of law, when passing judgment. In fact, Soviet judges may, when considering a case not foreseen by the criminal code, use their discretion in the widest sense. So far, Soviet jurists have not adopted the legal principle of nullum crimen, nulla poena sine lege (no crime, no penalty without law). They are candid in stating that law courts so far have been primarily political organs of the state. In fact, it was a former peoples' commissar of justice and president of the supreme court of the USSR, Peter I. Stouchka, who defined Soviet laws as "technical instructions," with no binding power over those who issue them. As promulgated and practiced, Soviet law courts have been enforcing not law per se but the political directions of the government, which, in turn, is controlled by the politbureau of the Communist party.

III. INHERENT CONTRADICTIONS IN SOVIET THEORY OF LAW, 1929–1938

Like many American jurists, Russian legal scholars were familiar with the writings of prewar German legal theoreticians. This phenomenon may account for the fact that the leading exponents of the Marxist proposition of the incompatibility of law with socialism were in reality giving new expression to the influence of German individualistic jurisprudence. That law per se is incompatible with socialism was the quintessence of the Soviet concept of law promulgated by Pashukanis and Krylenko, Soviet Russia's leading jurists during this period.

True, the Soviet regime is a dictatorship—government by decrees—hence there is no need of a theory of law. But as the Stalin regime entrenched itself in power and began to industrialize and militarize the Soviet Union at an unheard-of accelerated pace, the ruling political hierarchy of Russia has made clear in no uncertain terms that the Soviet State in its present structure has entered the stage of stabilization. Consequently, a radical reorientation of the basic tenets of a socialist theory of law had, of necessity, to be undertaken.

Soviet theoreticians postulated their arguments on the premise that all law is conditioned by conflicts between equals. They further argued that the legal subject of legal theory is the commodity procedure of political economy. Accordingly, the source and origin of all law is the exchange of commodities (trade). Following the individualistic German theory of jurisprudence, law is the system of ideas, rules, and devices which make the exchange of commodities possible, or settles the disputes which such exchange engenders. This theory takes for granted that in the relation by which law is conditioned, the parties should be equal to and independent of each other. Conversely, there is no place for law per se in any society where there are no conflicting interests requiring adjustment. The Soviets further argued that under socialism the whole national economy must become the private business of the state and therefore beyond law. The disappearance of law as an institution will follow closely the abolition of class conflicts and the eventual withering away of the state.

During the decade 1926–36, Eugene B. Pashukanis was the acknowledged leader of the Soviet school of juristic thought. As editor of Sovetskoe Gosudarstvo ("Soviet State Law"), he made the most authoritative formulation of Communist doctrines; and he was the recognized exponent of the Soviet interpretation of international law. Professor Pashukanis based his thesis on the Marxian dogma that the state will gradually wither away. Nevertheless, bringing his reasoning to its logical conclusion, he unwittingly adduced basic contradictions: "The enemies of the party are getting hold of the problems of withering away of law. If in the USSR, the capitalistic elements have been destroyed and a classless society has been built, why does the state still exist?" This view was so at variance with the "official" doctrine as to be regarded in the Kremlin as implacable heresy; and, true to form in "purges," the author was ordered to disavow his ideas. Shortly after the Stalin constitution was adopted, Pashukanis was "liquidated;" his textbooks were banned; he was declared an enemy of the people and berated for the ideas he had been teaching.

Similarly, Nikolai V. Krylenko, who was Commissar of Justice during the period 1931–37 * * * was generally credited with the "classical" exposition of the Soviet concept of law. He was one of the leaders of Soviet thought on criminal law, which corresponded to the interests of the "dictatorship of the proletariat" organized into a ruling class. Krylenko argued that Marxists understand very well the meaning of the dictatorship of the proletariat, and "we shall not tolerate any form of legal fetishism." Hence, Soviet jurisprudence denied the necessitv of formal legal guaranties in law proceedings.

* * * Krylenko maintained that in the struggle against social evils, the interests of the community shall be placed above those of individuals. Krylenko is also credited with the formulation of the Soviet principle that there is no distinction between the Ogpu (secret police of the Communist Party now known as the NKVD and the law courts. * * * "The only difference between the law courts and the Ogpu is that the former are less liable to commit mistakes; and on the other, courts of law provide no more legal guarantee than the Ogpu and, therefore, there is no fundamental difference between a trial in the law courts or in courts of the Ogpu."

* * * * *

IV. CURRENT CRISIS IN SOVIET JURISPRUDENCE, 1939–45

In our attempt to appraise the current Soviet concept of law and its impact on internal and international affairs, several observations merit recording:

1. Many writers in America, England, France, and Germany, who have published various commentaries on and analyses of Soviet concepts of law, have relied almost exclusively on Marxian interpretations of dialectic materialism and upon the writings of Lenin. While it is true that Soviet writers especially during the early period of the Russian Revolution, have expounded the Soviet concept of law as an application of Marxian theory, yet in fairness to Soviet legal writers it should be stated that they themselves have undergone several evolutionary periods in their exposition of the Soviet concept of law.

* * * * *

* * * it is relatively unimportant what Karl Marx said or what Vladimar Lenin wrote concerning Communist concept of law per se; but what is of significance is what Stalin's spokesmen say now that the Soviet concept of law means. And, what is more important, the Soviet concept of law is best illustrated by the practice and application given to it currently by the legal exponents of the Stalin regime, who are now in policy-making positions.

2. A pattern seems to be discernible, reflecting an internal postwar stability of the present regime, the like of which Soviet Russia has not experienced throughout the 28 years of its existence. Similarly, this trend indicates that the German invasion of Russia on June 22, 1941, brought about a national cohesion of most of the dissident elements within the Soviet Union such as the Stalin regime was unable to achieve throughout the years it has been in dictatorial power. The gradual appearance, however, of a new generation almost completely loyal to the present Soviet regime may well augur a new concept of law which will bring a greater degree of continuity and perhaps even begin

to establish precedents—that is, a record of cumulative Soviet experience, case law—and the demand for a Soviet stare decisis would conceivably become greater as time marches on.

3. Soviet spokesmen have made it abundantly clear that political issues are the determining factors in contemporary world affairs as well as in internal problems. Lenin is generally credited with the statement to the effect that "There is no more erroneous nor harmful idea than the separation of foreign and internal policy." Hence military exigencies and political expediences have of necessity been the basic cores in the shaping of the Soviet concept of civil and international law. To illustrate: Soviet legal writers contend that international law as practiced by capitalist states in their relations among themselves is directed toward a consolidation of the ruling position of capital and is a reflection of class conflicts within each country to put their rule over the proletariat and over colonial countries, whereas the Soviet Union, from the very beginning of its existence, has developed its own forms and brought about changes in substance of both internal law and international law commensurate with the projected political factors as visualized by the present Soviet policy-makers. Obviously, they were and are unfettered in choice of forms and change in substance of their internal law and in their exposition of international law.

* * * * *

5. Both critics and apologists of the Soviet regime have rendered a disservice to the Soviet Union in either condemning the Soviet type of totalitarianism or apologizing for the type of democracy exemplified by U. S. S. R. The truth of the matter is that Soviet spokesmen have stated their position in no uncertain terms to the effect that the Soviet regime is first and last a dictatorship of the proletariat, and they insist that the outside world recognize the Soviet regime as such, even though their propaganda beamed to North America is couched in terms of democracy. The classical definition was given recently by the Soviet dean of jurists, Andrei Y. Vyshinsky, who is at present Deputy Vice Commissar for Foreign Affairs, in an address delivered before the Soviet Academy of Sciences on November 20, 1942. In discussing the stability and strength of the Soviet regime and to what degree it permeated all fields of scientific endeavor after the days of the revolution, Mr. Vyshinsky declared that:

"On the basis of this historical fact it was predicated by Lenin that the Soviet state, as a state of the proletarian dictatorship, must be a new type of a democratic state for the proletariat and for the propertyless persons generally and a new type of dictatorship against exploiters and oppressors."

It should be noted that this statement of policy was promulgated in the darkest hours of the Soviet people, when the German armies were at the gates of Stalingrad. Contemporary Soviet spokesmen have continually reaffirmed their abiding faith in the enduring character and resilience of the Soviet collectivist system. This phenomenon has more recently been translated into practice. When the Potsdam communiqué was issued, Stalin signed this document, not as Premier, but as Generalissimo of the U. S. S. R.

6. The constitution promulgated on December 5, 1936, known in Soviet literature as the Stalin constitution, including all the amendments as of February 2, 1944, specifically provides in article 126 that "the most active and politically most conscious citizens in the ranks of the working class and other sections of the working people unite in the Communist Party of the Soviet Union (Bolsheviks), which is the vanguard of the working people in their struggle to strengthen and develop the socialist system and is the leading core of all organizations of the working people, both public and state."

A careful examination of all the 146 articles in the Stalin constitution reveals that few and far between are the provisions that have actually been effectuated prior to and during World War II. Since the end of the war Soviet newspapers and radio broadcasts are replete with glorified accounts of the major role played by the party in the defeat of Germany and Japan; thus identifying the military victories and resurgent Russian nationalism with the sagacious leadership of the party.

SUMMARY

To recapitulate, it is reasonably correct to state that the most important characteristic of Soviet socialist law is still its revolutionary creative force; laws are technical instruments with no binding power over those who issue them. This was especially so during the first decade of the Soviet regime. The law courts were, and in a large measure still are, primarily political organs of the state, organized to carry out the political directions of the government.

To be sure, since 1936 Soviet writers on jurisprudence have been using terms "Socialist legality" instead of "revolutionary legality." Their contention is that socialist legality reflects a greater degree of permanence and public interest in the administration of Soviet justice. In almost all instances, the interest of the whole and the duty to safeguard the social order of the Soviet regime have been the decisive criteria. Soviet jurists have always regarded the duties of the judiciary as identical with those of the governmental machinery, and a court has no specific duty differing from those of other organs of governmental power. Socialist law has therefore been regarded from the very beginning as an instrument of socialist reconstruction of the society; hence it is still in its transitional stage from socialism to communism.

Significantly, 28 years after its establishment (November 6, 1917), the Soviet Union appears to be emerging as the dominant political and economic power in Europe, in the Near East, and especially in the Far East. Moreover, it is a matter of common knowledge that the Soviet Union under the regime of Generalissimo Josef V. Stalin is now engaged in a program of far-reaching political and economic penetration in all of these areas. This has been evidenced at the United Nations Conference on International Organization at San Francisco and more recently by the Soviet delegation to the Council of Foreign Ministers in London. This phenomenon calls for a basic reorientation of socialist concepts of law; hence the present crisis in Soviet jurisprudence.

An examination of the writings of contemporary representative Russian legal students reveals that Soviet juristic thought appears to pay more heed to geopolitics and to economic factors than to the role of law in world order. Hence, they advocate collective security, universal peace, and friendly coexistence of nations, and validate the Soviet Government's course of action, however predatory, on legal grounds.

## Palestine Jewish Homeland

EXTENSION OF REMARKS
OF
### HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I call the attention of the House to the fact that I believe we acted wisely yesterday in passing the resolution urging the President to use his good offices in requesting the British to liberalize the Jewish quota in Palestine, designed for the purpose of establishing a Jewish homeland in that part of the earth which gave them birth. I do not share the pessimism of other people of this Nation, whose opinions I respect and who I think are equally as honest as I am, that such a move on the part of the Congress will prove embarrassing to our Government.

The British Government and the British people have been the beneficiaries of a great and unlimited generosity on the part of the American people; a generosity to which countless thousands of Jewish people have made substantial contribution.

The British Government is a signatory to the United Nations Charter. If the British Government has a friend in the world today, it is the United States of America. How on earth can they possibly be offended if we ask them to fulfill a promise they solemnly made to the Jewish people? If such a request is untimely and unreasonable, the family of nations is in a deplorable condition.

## America and the Philippines

EXTENSION OF REMARKS
OF
### HON. CARLOS P. ROMULO
RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. ROMULO. Mr. Speaker, views expressed by American newspapers are a correct gauge by which to judge the trend of American public opinion. Under leave to extend my remarks in the RECORD, I am inserting two editorials, one of the Times, of Bath, Maine, and another of the Boston Herald, of Boston, Mass. Their sympathetic attitude toward my people I must acknowledge with deep gratitude and I earnestly commend it to the attention of this Congress that will soon take up important legislation affecting the welfare and destiny of the Philippines.

These editorials are:

[From the Bath (Maine) Times of December 12, 1945]

THE PHILIPPINES

On our next Fourth of July the Philippines will become independent in accordance with acts of the Congress of the United States. Those acts were passed several years ago and ratified by further congressional authority on June 29, 1944.

The Philippines were one of our prizes of the Spanish-American War, and the first interest we had in the islands was Admiral Dewey's victory over the Spaniards in Manila Bay. We took them but we had a hard time holding the Philippines.

But in the last 47 years what might be called "a beautiful friendship" has grown up between the Filipinos and the American people. We aren't going to push them aside, and tell them to paddle their own canoe, and we are not going to withdraw our promise of independence scheduled for July 4,

1946. We had a pretty tough time in driving the Japanese out of the Philippines—but we did it.

Now, we are going to help the Filipinos establish their own government, and that program is progressing as rapidly as possible, supported by every branch of the United States Government. Such strong men as the leaders, President Osmeña and General ROMULO, are doing an A–1 job for their countrymen.

---

[From the Boston (Mass.) Herald of December 13, 1945]

FILIPINOS' VIEWS

Passage by the Filipino Senate of a resolution expressing sympathy for the Indonesians "in their fight for independence" reveals the extent to which American thought and action have been imitated in the Philippines. Concern over the affairs of other nations is an old American custom. Passing resolutions about them is a familiar practice.

The United States had hardly been established when the French Revolution became one of our political issues. On numerous occasions, as in the Greek war for independence, the American people have exhibited concern for the political underdogs of other lands, and many a European patriot has received a hearty welcome here. One European state—Czechoslovakia—was founded at Pittsburgh. Dr. Masaryk negotiated a Czech-Slovak unity pact there and issued the declaration of independence from Washington. The Philippines themselves have remained under American control as one result of our sympathy with the Cubans, who had suffered from Spanish misrule.

The political doctrines which the Filipinos have inherited from the United States will work both ways. When there is a sovereign Filipino nation its legislature and our Congress may not see problems eye to eye and the Presidents in Manila and Washington will have their little disagreements. But such a development is of negligible importance in comparison with the widespread benefits which will come to both nations and the world.

---

## The American Veterans of World War II

EXTENSION OF REMARKS

OF

### HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include an address by Clyde M. Longstreth, M. D., of Atlantic, Iowa, State commander of American Veterans of World War II, over radio station KSA, Des Moines, Iowa, on December 1:

Thank you, Mr. Earl; good morning, ladies and gentlemen: What I have to say is primarily for the ears of the war veteran. Yes, veterans of Iowa, my message vitally concerns you.

It is my pleasure and privilege today to tell you something about the fastest growing organization of its kind in America. I refer to the organization known as the American Veterans of World War II—or, by its more familiar name, the Amvets.

If you are a veteran of World War II, if you are one of those who feel that the principles for which you fought should not be permitted to languish, if you are concerned, as most veterans are concerned, with the future welfare of our Nation, you will be interested in the program of the Amvets. I am happy to have this opportunity to introduce the Amvets to you and to explain something of its activities.

The American Veterans of World War II had its beginning as an organization long before the guns fell silent in Europe and in the Pacific. In Washington, D. C., in September of 1944—at the same time that Patton's spearheads were entering Chateau-Thierry, Belleau Wood, while six Allied armies were still poised for the plunge into the Siegfried line—a number of earnest veterans of this same World War were already engaged in forming the nucleus of the Amvets.

From the beginning, there was something different about the Amvets. This difference was the noticeable absence of Army brass and Navy gold braid. Former enlisted men of the services comprised the group that first met and organized in Washington. I mention this merely to demonstrate that the Amvets does not represent the interests of cliques or privileged groups. It is an organization that belongs to all those who served their country in this war, irrespective of rank or social status.

During this same time, other veterans' groups had been springing up spontaneously throughout the country. In Kansas City, in December of 1944, representatives of the Amvets and these other groups met and agreed to join forces. There emerged a new and greater Amvet organization with Nation-wide representation. Before the war had ended, a charter had been drawn up and presented to Congress for approval.

In its first national convention, held in the Chicago Stevens Hotel, in October of this year, the Amvets adopted a constitution and bylaws. It also adopted a declaration of principles. That declaration should claim the attention of all veterans of World War II who are interested in the development of a sound American program to promote the cause of perpetual peace and good will among nations. I shall speak of these principles in a few moments. At this convention the Amvets elected its first national officers. These officials form a representative cross-section of the entire United States.

Since its inception the Amvets has enjoyed the support and good will of national leaders and organizations. The support of the Disabled American Veterans organization was pledged by its leader, Milton D. Cohn, who attended the Amvets October convention. Senators and Representatives in Congress have expressed favor with the program of the Amvets. On one of his Sunday evening broadcasts, commentator Walter Winchell spoke approvingly of the Amvets as he warned veterans against joining disreputable organizations. The Amvets, said Winchell, are "a very respectable, reputable group of Americans."

Membership in the Amvets is open to any American citizen, male or female, without distinction as to race or creed, who served actively in the Army, Navy, Marine Corps, or Coast Guard on or after September 16, 1940. Membership is open to women who served with the WAC's, the WAVES, SPARS, Marine Corps, or Nursing Corps. In this connection it is significant to note that, under the constitution of the Amvets, at least one of the six national vice commanders must be a woman. Mrs. Beatrice Wade, of Reading, Pa., holds the office of third vice commander of the Amvets organization.

The Amvets lists among its members many prominent figures of World War II. Among these are Gen. Carl Spaatz and General Middleton, both of whom belong to the Louisiana organization. With more than 15,000,000 potential veterans eligible for membership, the Amvets promises to become the largest and most influential veterans group ever organized.

Here in Iowa, the growth of the Amvets has been especially rapid. It was my privilege to have been instrumental in organizing the first Amvet post in Iowa. We organized in Atlantic, Iowa, with 14 members in January of this year. Our membership at the present time is 240, and we are still growing. Our numerous other posts throughout the State report a corresponding degree of expansion.

The Iowa Amvets has been named for the five Sullivan brothers, in honor of the glorious fighting spirit and supreme sacrifice which they so willingly made in November 1942.

Next week, on the anniversary of the day that will live in infamy, the Iowa Amvets organization will hold its first State convention. The date: December 7, 8, and 9. The place: the south ball room of the Hotel Fort Des Moines in Des Moines. We urge all present members and officers of the Amvets to attend. We also wish to extend an invitation to all veterans of World War II who are interested in the objectives and functions of the Amvets to attend this convention.

Most veterans realize the logic and reasonability of becoming identified with an organization such as the Amvets. Most of the millions of veterans of World War II are convinced of the futility of war as an instrument of national policy. They have seen at first-hand the devastation, the indescribable suffering, the heartache, the anguish which attends armed conflict between nations. The veterans of this war are young men and women, for the most part. Theirs is not the responsibility for making this war. They paid and are still paying for the mistakes of an elder generation. They do not want to see those mistakes repeated.

Veterans today realize that there are tremendous problems facing our Nation in the days immediately ahead. A war does not end with the treaty of peace, the instrument of surrender. Wars never do. The struggle between armies stops but the effects of war go on working their destruction for generations afterward. The veterans of World War II comprise the major part, the youthful part, the vitally interested part, of a new generation. It is up to them to see that the objectives for which they fought and for which so many of their comrades died are carried over into national life and action.

Individually, the veteran can do little. In order for him to assume a proper and legitimate role in the rebuilding of America it is essential that he and his former buddies be organized—and organized strongly.

If social and economic justice is ever brought about, if wars and depressions are ever made obsolete, if the letter and spirit of the preamble to the United States Constitution are ever given their rightful place in our individual and collective lives, if a better democratic society is ever achieved, it will be achieved by these men and women who have carried into a later active life the aspirations and ideals for which they so valiantly fought. The instrument through which they can make their influence effective is an organization strong in numbers and strong in principles. Such an organization is the Amvets.

Permit me to outline briefly a few of the principles to which the Amvets is pledged. These were drawn up and adopted by the October convention in Chicago. I quote from a portion of the declaration:

"We pledge ourselves to develop mutual confidence and understanding within our Nation and between America and the other nations of the world to the end that all men may live in peace and be responsible members of an enlightened family of nations. * * * We rededicate ourselves to service to our Nation in peace as in war to insure that American ideals for which we and our countrymen

have fought and died, may be preserved for us and posterity."

Among the principles for which the Amvets stands, we may mention the following:

We believe in international cooperation in making the "four freedoms" a living reality.

We believe in equality of opportunity, without distinction of political views, races, faiths, and creeds, with a solemn pledge not to become a front for destructive movements or isms.

We believe in the democratic adjustment of industrial relations, with a charge to both labor and management to "clean house" and adopt policies and procedures which will most rapidly assure the attainment of our Nation's full potentialities.

We believe in freedom of the press.

We believe that our returnees are entitled to the fullest opportunity for speedy reconversion to civilian status so that they may once more become constructive citizens.

We believe that Americans should exercise the full rights and obligations of citizenship, to protect our democratic principles, and to promote honesty and integrity in public office.

These are a few of the major ideals to which the Amvets is pledged. I believe these are principles with which all thoughtful Americans, veterans or otherwise, are in complete accord.

The Amvets has no intention to discredit or to detract from the influence of existing veterans' organizations of previous wars. The American Legion, the Veterans of Foreign Wars, the Disabled American Veterans—these have all made their significant contribution to our American mode of living, and the Amvets, their counterpart of World War II, extends the hand of fellowship and cooperation on matters of mutual interest. Nevertheless, we do feel, as most veterans feel, that those who served in this greatest of all wars should have an organization of their own, a young organization, composed primarily of young hearts and voices, which will reflect the spirit and temper of a new generation.

For this reason, I earnestly beseech Iowa veterans of World War II to become familiar with the Amvets, to examine its objectives, to join it, and to support it. The various posts of the Amvets in Iowa stand ready to answer inquiries with respect to our organization and to receive new members. For those of you who are able to do so, we invite your attendance at the first State convention of the Iowa Amvets at the Hotel Fort Des Moines in Des Moines next week. There you will have an opportunity to examine at first hand and at your leisure the program of the Amvets, and to join in the fellowship of your former comrades in arms. The convention will open on December 7 and will run through December 9. We offer on the program such distinguished guests and officials as members of the staff of General Arnold, Chief of the Army Air Forces, Washington, D. C.; Gen. Omar Bradley's staff, who is Administrator for our veterans' affairs in Washington; Iowa's Sgt. Ralph G. Neppel, of Carroll; Col. Dennis C. Nickell, of Council Bluffs; the Sullivans' sister, Miss Genevieve, of Waterloo; and the chairman of the convention committee, Maj. C. W. Hoffman, of Des Moines.

American veterans, here is your opportunity, as American citizens, as the generation of tomorrow, to unite in fellowship and patriotism to the end that we shall be able to reconstruct a new world order out of the debris left by the war, an order founded solidly on the democratic ideals we have so long cherished and for which we have so earnestly fought. You can do this under the banner of the American Veterans of World War II.

I thank you.

## Assistant Secretary of the Navy Disagrees With John Cowles on Single Department of Defense—Representative Randolph Disagrees With Secretary Hensel—Correspondence Is Presented

EXTENSION OF REMARKS
OF
## HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. RANDOLPH. Mr. Speaker, I include herewith correspondence received from the Assistant Secretary of the Navy, the Honorable H. Struve Hensel, to John Cowles and myself and the reply which I made:

THE ASSISTANT SECRETARY
OF THE NAVY,
*Washington, December 14, 1945.*

Hon. JENNINGS RANDOLPH,
*House of Representatives,*
*Washington, D. C.*

MY DEAR MR. RANDOLPH: I am enclosing herewith a letter which I have today addressed to John Cowles, chairman of the board of Look magazine. I trust that both you and he will give it the same prominence that his statements were given. It is my honest belief that he made a number of erroneous statements of fact which I believe should be corrected.

This problem of national securty is so important to the country that all our conclusions should be based on supportable facts rather than guesses and unproved opinions.

Sincerely yours,

H. STRUVE HENSEL.

---

DECEMBER 13, 1945.

JOHN COWLES, Esq.,
*Chairman of the Board, Look Magazine,*
*New York, N. Y.*

MY DEAR MR. COWLES: I have just seen an article written by you entitled "We Must Unify Our Armed Forces," which was inserted in the CONGRESSIONAL RECORD of December 12, 1945, by the Honorable JENNINGS RANDOLPH, of West Virginia. He described the article as splendid and convincing and pointed to your first-hand knowledge of the theaters of war.

Your article extends much further, however, than your actual experience in the theaters of war and endeavors to cover the field of procurement. In respect of procurement matters, your statements of fact are, in my opinion, in serious error.

I have in mind your statement that if the two services had been unified 10 years ago: "Tens of billions of dollars would have been saved." That is an extravagant and unsupportable statement.

I realize that somewhat similar statements have been made by men in authority, but when challenged they have always avoided proof and have described their statements as "guesses." Furthermore, few of the men making such guesses have devoted themselves to procurement during this war. I am quite disturbed about misleading the public by these erroneous allegations of economy which cannot be proved and which, in my opinion, are untrue.

You also stated:

"The procurement services of the War Department and Navy Department at home bid against each other for supplies and equipment."

That is another statement which cannot be supported.

I have been engaged in procurement work in the Navy Department for the past 5 years. I have also discussed this matter with Secretary Forrestal, who, before me, was in charge of the procurement of material in the Navy Department. Neither of us know of any instance in which the two departments bid against each other for supplies and equipment, except a few instances very early in the war in respect of lumber. Such situation was immediately remedied by the creation of an independent purchasing agency for lumber. I would be very interested to know whether you had any instances in mind when you made your unqualified statement.

I was also interested in the fact that you based your conclusion as to the need for a single secretary on the assumption that one secretary would automatically provide unity of command in the field. Yet one of the disunities, i. e., the separation of the Army command under General MacArthur from the Strategic Air Force command under Generals Arnold and Spaatz occurred during this war under the eyes of a single secretary. If the appointment of a single secretary automatically provides for unity of command, why did the Secretary of War fail to achieve unity of command within the War Department? It seems to me that your criticism of that separation of command unconsciously proves that the appointment of a single secretary is not a guaranty of unity of command in the field—at least it was not such a guaranty in this war.

We are all aware that war is now total. The Navy program for unity of effort is a plan which provides for the unification of all governmental functions in the prosecution of the war. The Navy plan embraces the activities of the State Department and also brings into unified direction the conservation of natural resources, the mobilization of industrial capacity, and the utilization of our manpower. The appointment of a single secretary for the armed forces as urged by you is an unsupportable solution of only a fragment of the problem.

I believe we are all agreed on the importance of an efficient national security establishment and it seems to me to be doubly important that the decisions are reached on the basis of correct statements of fact and that guesses are prominently so labeled.

Sincerely yours,

H. STRUVE HENSEL.

---

DECEMBER 20, 1945.

Hon. STRUVE HENSEL,
*The Assistant Secretary of the Navy,*
*Washington, D. C.*

MY DEAR MR. HENSEL: I have read carefully your letter of December 14, 1945, and the enclosed copy of your communication to John Cowles. In this letter you appear to accuse Mr. Cowles of having made erroneous statements, in his splendid article on unification of the War and Navy Departments which I inserted in the CONGRESSIONAL RECORD of December 12, 1945.

I have looked further into the statements of Mr. Cowles which you criticize and into the merits of your own assertions—in accordance with my policy of sponsoring in the Congress only statements fully supported by the facts. My examination leads me to the conclusion that not only were Mr. Cowles' statements entirely in accord with the facts, but certain of your own indicate a lack of information or inability to interpret facts which, were it not for the heat of controversy in which you are engaged, would be surprising.

In your assertion that the command organization of the Strategic Air Forces in the Pacific is proof or evidence that unity of command in the field cannot be guaranteed by a single Secretary, you appear to be quite uninformed as to that organization and the strategic considerations which required it. According to my information, early B-29

activity of the Twentieth Bomber Command, Twentieth Air Force, involved operations in and over the Southeast Asia Command of Lord Mountbatten, the China-India-Burma command of General Stilwell, the Southwest Pacific theater under General MacArthur, and, to a lesser degree, the Pacific Ocean areas under Admiral Nimitz. When these operations were supplemented by the Twenty-first Bomber Command based in the Marianas, further operations and activities were, I understand, required in Admiral Nimitz' theater and the Southwest Pacific theater. It is apparent to me that the far-flung nature of these operations required that the Twentieth Air Force be directly under the control of the Joint Chiefs of Staff, to assure coordination with the four theaters in question.

In the later days of the war, it appears that General Spaatz' headquarters was established at Guam to direct the operations of the entire Twentieth Air Force from the Marianas and the Eighth Air Force from Okinawa. In this stage also, operations were involved in the areas under direction of General MacArthur, of Admiral Nimitz, and, to a smaller extent, of General Wedemeyer.

Inability of the Joint Chiefs of Staff to establish a single unified command for the Pacific Basin was the factor which made it necessary to continue the strategic Air Forces directly under the Joint Chiefs of Staff. Had there been a single supreme command, the strategic Air Forces would, without doubt, have been placed under it. With command divided between Army and Navy, no alternative was possible except direction by the Joint Chiefs of Staff.

In view of your concentration on procurement matters, for 5 years, it is doubtless inevitable that you should be unfamiliar with the strategic problems and considerations involved in the decisions to which I have just referred. It does seem to me, however, that, without such familiarity, you should refrain from publishing what are at least misinterpretations of this situation. Far from supporting the conclusion drawn by you, the inability of the Joint Chiefs of Staff to establish unity of command as between the Army and Navy was in itself the reason for the organizational position of the strategic Air Forces in the later days of the war.

I am rather surprised that in spite of your experience in procurement work in the Navy Department you label as "extravagant" and "unsupportable" the statements by Mr. Cowles that tens of billions of dollars would have been saved if the two services had been unified 10 years ago, and that during the war the procurement services of the War Department and the Navy Department at home bid against each other for supplies and equipment. I am reliably informed as to the former that an assessment of only a fraction of the field of hundreds of thousands of items used by the two services reveals that unification would have realized in the field of—

(a) Research and development: Considering an average 3-year period of the war only, savings of $372,067,000 in 17 items alone.

(b) Purchasing: Over the same period, considering 32 items only, a saving of $3,649,-138,000.

(c) Facilities: In the 3-year period, a saving of $665,383,000, considering only 11 items.

(d) Supply and materials handling: In 3 years, considering 9 items, a saving of $3,378,729,000.

Thus, when one realizes that a survey of only a small portion of the field reveals probable savings under unification of some $8,-065,317,000 over a 3-year period, Mr. Cowles' statement is not so "extravagant," or "unsupportable." Quite the contrary, it appears obvious to me that a comprehensive coverage of the entire field would result in figures completely justifying his statement.

As for the competitive bidding, I will give you only five instances of many which your preoccupation with lumber (the forests and the trees) may have prevented you from discovering.

(a) The Army and Navy both had placed orders for 3,000-gallon water tanks with the W. W. McFarland Co., Miami, Fla. The Navy was paying 10 percent more than the Army for essentially the same item, and therefore the manufacturer concentrated on meeting the Navy schedules.

(b) During 1944 the Army and Navy were engaged in scheduling engines and engine spare parts with manufacturers in the Detroit area. There was direct conflict between the services. Manufacturers could not meet both schedules and the War Production Board has to step in to effect coordination.

(c) The Haslett Chute & Conveyor Co., Oakes, Pa., was making M–4 ponton bridge parts for the Army and fighter aircraft wing tips for the Navy in January-May 1945. Strong competition existed for facilities and for labor, particularly for aluminum riveters, and as a result the production for both services fell behind schedule.

(d) Medical and drug supplies were purchased by the Army and the Navy with little or no coordination. Out of 266 contracts checked, 72 had been placed with the same contractor by the two services. It was not until 1945 that joint Army-Navy procurement of these supplies was organized.

(e) The Joint Army-Navy Procurement Agency was formed in 1945 only after an investigation and strong recommendation by the Special Committee to Investigate the National Defense Program. It is estimated that the joint agency saved $25,000,000 in the first 9 months of operations.

I heartily concur with your view that in this important matter conclusion should be based on supportable facts rather than guesses and unproved opinions. I confess that, in your letter, I find guesses and opinions not merely unproved, but readily disproved. I shall gladly ask leave to insert your communication, with enclosure, together with this reply, in the CONGRESSIONAL RECORD.

Sincerely yours,

JENNINGS RANDOLPH.

## Federal Aid to Education—The Fight Must Go On

EXTENSION OF REMARKS

OF

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. KEFAUVER. Mr. Speaker, educational opportunity for the use of the Nation received a severe set-back in the Nation's Capitol last week. The House Committee on Education, by the narrow vote of 10 to 9, turned down the Ramspeck-Hill bill to provide Federal aid to education. Those of us who have been active in sponsoring this legislation are, of course, disappointed. But we must not give up the fight. We will carry on and in the near future we will win. We will win because right and justice is on our side.

The vote in the Education Committee is the best showing we proponents of this bill have yet made in this House committee. We have formed a steering committee to continue to press for passage of this needed legislation. Some future Congress is going to realize that equality of opportunity necessarily carries with it equality of educational opportunity. Some future Congress is going to appreciate the necessity of passing this legislation.

The educational issue:

To people who do not believe that education is essential to the creation and maintenance of a high economic and social status for the people of America there is no need to discuss Federal aid or even State aid for education. To those who do not believe that the opportunity to attend a good school throughout childhood and youth is a right that should be enjoyed by all there is not much point to the discussion of devising methods of school finance to place a floor under a desirable minimum of educational opportunity for all American children and youth. To such persons it seems all right that educational opportunity should be left to the chance of being a member of a family or the resident of a community that possesses the financial means to pay for education. To them it seems all right that the children of the masses of the people regardless of talent, ability, and character should become the hewers of wood and drawers of water for privileged persons.

Equality of educational opportunity—American doctrine:

Fortunately a very large majority of American people accept equality of opportunity, especially equality of educational opportunity, as the birthright of every American child and agree that a legitimate function of democratic government is to sustain and make a reality of that birthright. The American people, by and large, believe that the kind, quality, and amount of education received by our people is a primary factor in their economic, political, and social welfare.

Education and national wealth:

We know that there is a direct relationship between the educational attainments of the people and a nation's wealth. Recently the Chamber of Commerce of the United States published a bulletin, Education Steps Up Living Standards, that reveals that the level of understanding and technical knowledge of all the people of a nation is an indispensable factor in national economic well-being. By comparison it is shown that some countries have great resources such as rich land, oil, minerals, low-cost electric power, and good climate, while at the same time they tolerate low standards of education and technical training and extremely high rates of illiteracy. Such countries, lacking the knowledge necessary to use these resources properly, have low income and extremely low standards of living. Other countries have poor soil, few minerals, no oil, inclement climate, short growing season, and poor sources of power, but high standards of education and technical training and illiteracy is practically nonexistent. Such countries have high incomes and high standards of living for practically everyone. "The lack of resources did not prevent the development of a high standard of living when the people had sufficient skill."

Education means high income:

Within the United States the evidence is replete that high education and high income and high standards of living go hand in hand. Average public-school expenditures in Nevada for 1910, 1920, and 1930 were $102 per pupil; in New York, $83; in Tennessee, $24; in Mississippi, $21. Retail sales per capita in 1940 in Nevada were $564; in New York, $414; in Tennessee, $208; in Mississippi, $129. The number of telephones per 1,000 population in Nevada is 175; in New York, 206; in Tennessee, 79; in Mississippi, 36. The circulation of 18

nationally known magazines per 1,000 population in Nevada is 509; in New York, 300; in Tennessee, 151; in Mississippi, 104. During the present war the rejection of draftees because of lack of education per 100 men examined in Nevada was 1.3; in New York, 1.4; in Tennessee, 9.1; in Mississippi, 12.4.

Federal assistance necessary:

Evidently education is an investment in people that pays enormous dividends in dollars and cents, to say nothing of the cultural advantages of an educated people as contrasted with an uneducated people.

Granting that education is essential to our national well-being, is Federal assistance in financing schools a necessity? This question has too often been answered by merely citing the tradition that the support of public schools is a State responsibility. It is a fact that under the tenth amendment of the Constitution of the United States the control of education is a power reserved to the States or to the people. But from the earliest days of the Republic the Congress has been upheld by the courts in exercising the right to grant financial assistance to the States to promote the general welfare. In so doing the Congress does not gain the right or power to take from the States the control of the activity or agency aided.

Merely citing the doctrine of State's rights and responsibilities does not remove the economic necessity for Federal participation in the support of public education. The economic necessity for Federal aid has been so thoroughly established and should now be so well known as to require no further discussion. In a nutshell it is this: There are great inequalities in the economic ability of the States to pay for education. These inequalities have been relatively constant for many decades. Furthermore, the States with the least economic ability to raise public revenues have many more children in proportion to adult population than the richer States. A few pertinent facts will illustrate the point.

In 1943 the per capita income in California was $1,429; in Tennessee, $649; in West Virginia, $638. The number of children 5 to 17 years old per 1,000 population in 1943 in California was 172; in Tennessee, 249; in West Virginia, 291 (the highest in the Nation).

Equalizing the burden:

These facts mean that in order to raise the same amount of money per child of school age in 1943, West Virginia would have had to make about three and one-half times as much effort, and Tennessee about three times as much effort as would California. In order to raise $105 per school-age child in 1942–43 (which was the average amount actually spent per pupil in average daily attendance in the Nation as a whole that year), West Virginia and Tennessee would have had to make two and eight-tenths and two and six-tenths times the actual national effort, while California could have raised the same amount per child with only eight-tenths times the national effort.

The inequalities of educational opportunity resulting from the unequal educational burdens and the unequal ability to pay for schools have for a long time been well known. The average expenditure per pupil in average daily attendance ranges from $35 in Mississippi to $179 in New York (Tennessee, $55). The average salary of teachers (1942–43) ranges from $654 in Mississippi to $2,697 in New York (Tennessee, $963). The average salary of a rural teacher in the United States is only $959, as compared to $1,955 per urban teacher. The percent of youth of high-school age actually in school ranges from 40 percent in Mississippi to 95 percent in Washington (Tennessee, 45.6 percent). These inequalities of opportunity constitute an intolerable situation in a democratic nation.

There is now pending in Congress legislation calculated to remedy the situation, the Thomas-Hill-Ramspeck bill (S. 181 and H. R. 2849). Hearings have been held and the Senate and House committees should lose little time in reporting them to the Senate and House for a vote. Without doubt, a majority of both Houses is favorable to such legislation.

A national problem:

The bugaboo of Federal control of schools should not be permitted longer to deny adequate educational opportunity to several million of our Nation's children. We can have Federal aid without Federal control. To deny that we can is to deny the successful operation of our form of government.

I believe that if the Federal Government has the right to reach into the most remote corners of the Nation and call youth to the defense of the country that same Government has the obligation to support a program of education that will enable them to perform such a duty well.

The heaviest burden for paying for this war will be laid upon those who are now the Nation's youth. I believe it will strengthen the faith of youth in their country's future if the National Government will guarantee the financial support of a program of education which will enable them to pay this debt.

I for one believe that the school teachers of America are the first and chiefest servants of the Nation, and that the laborer is worthy of his hire. Federal aid is necessary to adequate remuneration of our teachers.

Public education is a public necessity. Federal aid for public education is essential to an equitable distribution of the blessings of education among the children and youth of America.

---

## Labor

EXTENSION OF REMARKS
OF

### HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. IZAC. Mr. Speaker, pursuant to the granting of my unanimous-consent request, I insert the following article taken from the publication American Federationist of December 1945.

The views of Archbishop McNicholas so clearly enunciated herein are, without question, shared by a large number of us here in the House of Representatives.

I direct especial attention to these words of the archbishop:

If justice prevails and labor is given its just share of profits, individuals and corporations will be limited necessarily to reasonable gains. Investors are entitled to a reasonable profit and nothing more.

If the people of the United States would simply sit down and calmly reason this out, they would find themselves in full agreement with that statement.

The conflict of views between management and labor arises over the size of the piece of pie each will get, using the dollar of profits as a nice round pie.

I recognize the church's stand is that labor's share must be sufficient to maintain the dignity of the individual and permit him to provide a decent living for his family. Anything less than that would be too small a share—too small a piece of that pie.

There is another fact Archbishop McNicholas could well have pointed out: practically all of labor's share goes right back into the financial blood stream of our country. But if too large a share is retained by the relatively few who make up management and capital, those excess gains are not turned back in anywhere near the same proportion, but are tucked away to swell the vast fortunes accumulated by the few.

This inevitably brings on the vicious cycle of lowered production and decreased consumption, which always ends in depression and economic collapse.

The article follows:

A CHURCH LEADER TALKS ABOUT LABOR—A CONDENSATION OF REMARKS ADDRESSED BY ARCHBISHOP JOHN T. MCNICHOLS TO RALLY OF THE HOLY NAME SOCIETY IN CINCINNATI

After this terrible world conflict, and after all that labor has done to win the victory, it is not surprising that workingmen should wish to take advantage of the hour to secure a justifiable share of recompense and profit for their labors in production.

The burden of taxation, which must be borne by the whole American people, will prevent in the future, let us hope, the amassing of fabulous fortunes by individuals and corporations.

If justice prevails and labor is given its just share of profits, individuals and corporations will be limited necessarily to reasonable gains. Investors are entitled to a reasonable profit and nothing more.

CORPORATIONS HAVE OBLIGATIONS

A corporation for profit is a social entity. It has social obligations. It depends on a group of the public to supply its workers. It depends on the public to use or to consume its products. The public has a right to know its transactions.

Labor, in the light of public knowledge, must not make unjust demands; capital must not selfishly take more than its share of profits.

Undoubtedly there should be a serious increase in wages for employees, unless there be a radical rearrangement of conducting business, but labor will make a mistake if in this hour it gives its whole attention to an increase of wages. Labor should examine the over-all picture; it should consider a long-time program. It is urgent that, besides the increase of wages, labor make other gains.

Labor and management should sit down regularly at the same conference table. Labor should have a voice and a vote in the meetings of the board of directors.

A certain substantial portion of the stock of a company should belong to labor—not, indeed, to individuals, but to the whole group which constitutes labor. This arrangement will allow succeeding members of labor to share in the profits of a corporation as their predecessors did.

Labor and management should be friendly colleagues, not enemies. Management should not assume the role of dictator or consider itself endowed with a human dignity which is denied labor. The dignity of labor was made sublime by the poverty and labors of Christ.

Just as there are degrees of physical perfection and intellectual keenness in human beings, so there are degrees of usefulness and capacity among men who labor. One man has one talent, another two, another five. The varied gifts of individuals and the varied quality of the work done by men make a hierarchy in the ranks of labor; which means that one man is recompensed more than another, and that one man has a greater share in profits than another.

There must, however, be a minimum standard. Every man is entitled to live ac-

cording to the dignity of a human being. He is entitled—by fulfilling his part of the contract with management—to the means to live in keeping with human dignity. He is entitled—by fulfilling his part of the contract—to security, to a family wage which will enable him to found a home and maintain a normal family.

NOTHING SACROSANCT ABOUT CAPITAL

The church must say that there is nothing sacrosanct about the present mechanics of capital, but the church will always insist on justice for capital.

Some will say that the church is radical. She must be sanely radical to expound the fundamental principles governing labor, management, and capital, and to secure justice for the man who toils.

Labor is coming into great power in our country; if not tomorrow, then the next day. It should prepare for that responsibility. Hundreds of capable young men with good judgment should be given opportunities to study profoundly the basic principles governing labor, capital, management, and economics.

## House Resolution 462, To Provide Housing for Families of Servicemen and Veterans

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. WASIELEWSKI. Mr. Speaker, the housing shortage is estimated at between 12,000,000 and 13,000,000 homes. In looking at the national situation it is necessary for us to take into account the fact that during the 10 or 12 years of depression prior to the war few homes were built. When we became involved in the war only a limited number of homes could be built because of the shortage of critical materials. During the war thousands of families moved into and congested war-production centers. Many remained since the shooting ended. The housing shortage was made more critical during the war by a great increase in the number of marriages, which means more families looking for homes. The number increased from a general average of 1,320,000 a year in the thirties to 1,758,000 a year in 1942. It is expected the total will run to 2,000,000 in 1946.

It is estimated that approximately 1,200,000 new homes will be required to take care of our returning veterans. When you stop and realize that during our largest home construction year—1925—barely 1,000,000 homes were built, the immensity of the job ahead of us can be fully appreciated.

The legislation before the House provides the funds and it is not expected there will be any dissent to this request. However, in order to make the housing for which it provides a reality, it is necessary that steps be taken to make available a greater supply of lumber and other commodities so essential to home building. Further, whole and complete cooperation between builders and their employees, as well as manufacturers of housing equipment and their employees, is vitally essential to our building program.

In my home city of Milwaukee, where there is a very serious housing shortage and with thousands of returning veterans looking for shelter, we find that the completion of more than a thousand homes has been delayed for over 3 months as a result of a strike in the 15 principal millwork plants in the metropolitan area. It is said the workers affected by the strike have, for the most part, found employment in other industries so the biggest burden of the strike is thrown upon the unfortunate people who are waiting for materials to complete their homes. Housing for at least 5,000 persons would be made immediately available if these homes were completed.

Much construction of new homes has been, of necessity, indefinitely deferred because of the strike situation. Thus it is imperative that if we are to provide the housing authorized by this legislation before the House, greater harmony and cooperation between employees and employers must be cultivated and maintained.

Our entire reconversion program stands a good chance of bogging down as a result of disputes and difficulties between labor and management. If the jobs we have promised our veterans are to be ready for them upon their return we must proceed with the business ahead. It will require more than the mere appropriation of millions of dollars by the Congress to make a reality the homes and jobs for our veterans.

## The Struggle for Power

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. ANGELL. Mr. Speaker, the power problem is of great importance to all of us in the Pacific Northwest, and I include in my remarks the following editorial on the subject which appeared in the Portland Oregonian, December 15, 1945:

THE STRUGGLE FOR POWER

Everyone in the Pacific Northwest should be informed that this region, a billion-dollar empire of dams, electricity, irrigation, and river development, is the prize in a tremendous struggle for power among Federal departments and bureaus. Private business interests, farmers, State governments, and just plain people are involved in this fight. The principal battles will be in Congress, and the skirmishes have started.

The outward manifestations of this struggle are numerous: The organized campaign to force an increase in the $17.50 per kilowatt year rate for Federal power from Bonneville and Grand Coulee; the fight over allocation of costs between irrigation and power for the Grand Coulee Basin project; the resolutions and agitation for and against a Columbia Valley authority, and the imminence of a revised bill for establishment of a CVA; the vote in the House appropriations committee which eliminated from the deficiency supply bill items for flood control by the Army engineers—because multiple-purpose dams in the Willamette Valley were involved.

Northwesterners cannot afford to stand idly by while a fight cynically abetted by the industrial East is permitted to jeopardize development of the region's resources. It is our empire that is at stake, our future that is being gambled in the game of power politics. The President of the United States should step in to control his Cabinet if the Secretary of the Interior is not disposed to keep two of his own bureaus in line.

One need not be an advocate of a CVA to recognize that hydra-headed development of the Columbia Basin has run into major difficulties. Congress is so confused by the conflicting pressures for funds and authority that it will be in the mood soon, if not already, to call a halt in Federal sponsorship of additional dams on the Columbia, Snake, and Willamette. Let's take one illustration:

The Bonneville Power Administration, an agency of the Department of the Interior, is charged by law with marketing over its own transmission lines the electricity generated at Grand Coulee, built and operated by the Bureau of Reclamation, also an agency of the Interior Department, and at Bonneville, built and operated by the War Department. BPA, which ran its revenues up to $20,000,000 a year in wartime, must pay most of the costs of Bonneville and Coulee, including the million-acre irrigation project of the Coulee Basin, yet has nothing to say about those costs.

Some months ago the Administrator of Bonneville, the Commissioner of Reclamation, and the President of the United States signed a memorandum stating what the final cost of Coulee Dam and the irrigation project would be, and pledging electricity to subsidize $270 of the $355-an-acre cost of irrigation. These figures went to Congress. Without consulting Bonneville, the Bureau of Reclamation subsequently revised its estimate of the cost of the Coulee project by adding $95,000,000. The Bureau insists that the Bonneville Power Administration now must contribute $335 an acre instead of $270, while the irrigation allocation remains at $85.

The change in estimate inevitably provided ammunition to those who seek to force an increase in Bonneville rates—and these include some private power competitors, certain reclamation groups, the customers of the Reclamation Bureau's Boulder Dam and other projects, and, it may be strongly suspected, the Bureau of Reclamation itself. It gave encouragement, further, to those few in Congress who have revived the old argument that the Government should sell its power at the bus bar and force the customer (meaning, in most instances, a private power company) to build its own lines to the dam.

Northwesterners need not be told that guaranteed low power rates are the principal attraction to new industry that this region has to offer, and that the threat of increased rates is a strong deterrent to new industry locating here.

It is no secret that the Bureau of Reclamation has never liked the idea of delivering its power at the bus bar to a separate agency for resale, and the suspicion is current in Government circles that the Bureau's goal is to absorb the Bonneville Power Administration. Friction between the agencies approaches open warfare. Why has Secretary Ickes not intervened? We think his sympathies lie strongly with the Reclamation Bureau, his first love.

The Missouri Valley Authority proposal, which became involved in a fight as bitter as that now developing over the CVA, evidently is a dead duck, so far as this Congress is concerned. If the CVA is brought to vote early next year and defeated, none of the frictions among the Federal agencies will have been

eliminated and the problem of management of a billion-dollar Federal program will be no nearer solution. It's something like the Army-Navy fight.

## Judge Moscowitz's Fine Record

EXTENSION OF REMARKS
OF
**HON. EUGENE J. KEOGH**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Brooklyn Eagle Tuesday, December 18, 1945:

JUDGE MOSCOWITZ'S FINE RECORD

The Eagle is happy to extend congratulations to Judge Grover C. Moscowitz on the completion of 20 years on the Federal Court bench in the eastern district of New York.

Appointed by President Calvin Coolidge, Judge Moscowitz has administered the important duties of his office with distinction. His native ability, his constant desire to render exact and impartial justice, and his complete fearlessness have combined to make his record of two decades one of which the people of Brooklyn may well be proud.

Above all, his fellow jurists, the members of the United States attorney's office, Federal jurors who have served in his court, and other Government officials whose duties brought them into contact with Judge Moscowitz realize fully the high caliber of his public service.

## Black Hills Campaign for UNO Capital Brought World Capital to the United States

EXTENSION OF REMARKS
OF
**HON. KARL E. MUNDT**
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks, I am including an article written by the editor of the Daily Argus Leader, of Sioux Falls, S. Dak., Mr. Fred C. Christopherson, and appearing in a recent issue of that important newspaper—the largest in five States in the South Dakota area.

The article follows:

BLACK HILLS DRIVE BROUGHT UNO SITE TO UNITED STATES

(By Fred C. Christopherson)

Whether the UNO selects the Black Hills for its capital or not, the committee out there can enjoy the rich satisfaction of knowing that its campaign was largely responsible for the decision to place the Organization's headquarters in the United States.

Those who know the story behind the story well appreciate this.

Other interested sites have put forth intensive campaigns to command attention, but it was only the Black Hills that stepped forward on the broader phase of insuring first a location in the United States.

The official steps in this respect—and I speak advisedly—were instigated and activated through the Black Hills committee.

GOVERNORS TAKE ACTION

The first was at Mackinac Island last July when Gov. M. Q. Sharpe induced the governors' conference to adopt a resolution urging the UNO to place its headquarters in the United States.

This was strictly and exclusively Sharpe's enterprise. No other governor had proposed such a resolution or, it appeared, even thought of it.

But Sharpe started to work on the matter en route with the governors by ship from Detroit to Mackinac. At first there was objection, some contending that the matter was outside of the conference's province. But with dogged persistence Sharpe kept interviewing governor after governor and soon had sold his idea. The resolution was adopted unanimously before the conference adjourned.

But there was still much question at London in November about the American location. One draw-back was the absence of an official invitation.

President Truman, in fact, had told the American delegation not to promote a site in the United States but to assume the attitude that if the UNO should want to come here, it would be welcome.

That, however, wasn't sufficiently affirmative. Paul Bellamy, of Rapid City, sensed this while he was in London and realized there was a strong likelihood that the United States would not be selected unless something in the way of an official invitation was immediately forthcoming.

INVITATION OBTAINED

So he went to work when he reached Washington last week. First Representative FRANCIS CASE, of South Dakota's Second District presented a resolution of invitation to the House where it was adopted unanimously. Then Senator CHAN GURNEY, of South Dakota, offered the resolution to the Senate Foreign Relations Committee and obtained its unanimous endorsement. A few minutes later, he presented the committee's recommendation to the Senate and it was approved without a dissenting vote.

BELLAMY CONFIDENT

So confident was Bellamy that this action would turn the tide in favor of the United States that he said so flatly in a statement he issued to The Argus-Leader for publication.

"This decides it," he said, "and I've just advised our delegation in London about the action of Congress. As soon as the delegation informs the UNO officially about it, they'll vote to place the capital in the United States."

And 2 days thereafter the UNO voted to place its headquarters in the United States.

It is quite obvious that without the persistence of the Black Hills committee, the UNO very probably would have placed its headquarters in some nation other than the United States.

Mr. Speaker, as pointed out by Mr. Christopherson's article, it was Governor Sharpe, of South Dakota, who brought the matter of locating the United Nations Capital in the United States before the governors' conference at Mackinac Island last summer, and it was South Dakota's Governor who introduced the resolution at the conference inviting the UNO to locate its capitol in this country. It was Governor Sharpe, also, who pressed successfully for favorable action on this resolution.

Following that action, my colleague from South Dakota, Mr. CASE, introduced House Concurrent Resolution 75, which sought to place the Congress of the United States behind the invitation advanced by the governors' conference. House Concurrent Resolution 75 reads as follows:

*Resolved by the House of Representatives (the Senate concurring)*, That the United Nations be, and hereby are, invited to locate the seat of the United Nations Organization within the United States of America. Both the House and the Senate approved this concurrent resolution, and last week in London the United Nations, by a vote of 30 to 14—more than the necessary two-thirds—decided definitely and finally to locate its capital in the United States.

During the fall and summer, both Congressman CASE and I extended personal invitations to the heads of over half the members of the United Nations, in their own capitals, urging the choice of the United States as the home of the UNO capital and calling attention to the special advantages and attractions offered by the proferred sites in the Black Hills mountain country of South Dakota, Wyoming, and Nebraska. It is interesting to observe that by far the greater percentage of the countries which we visited voted in favor of the United States in the decision reached in London last week.

Mr. Speaker, the supporters of the Black Hills UNO capital site are confident that upon inspection by the traveling commission of the United Nations Organization charged with responsibility of recommending specific locations within the United States, the Black Hills site will be favorably considered. The Associated Press story of last night quoting the British Government as "favoring a small town site—not too close to Washington, D. C." would seem to indicate that they would look with pleasure upon the selection of such a site as the Black Hills—midway as it is between the two coasts, free from any overshadowing influences of geographic, newspaper, or political bias, and protected by mountains and by location from atomic bomb attacks since it would thus be far from any military objective and close to convenient opportunities to establish such underground chambers as security dictated.

## Amendments Suggested to National Service Life Insurance for Lump-Sum Payments and Endowment Policies

EXTENSION OF REMARKS
OF
**HON. WRIGHT PATMAN**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. PATMAN. Mr. Speaker, Monday, December 17, 1945, I introduced H. R. 5016, a bill to amend the National Service Life Insurance Act of 1940 to provide that the proceeds of the policy may be payable to the beneficiary either in a lump sum or over a period of years.

Under the existing law, these policies are payable over a period of years and are not payable in a lump sum, although

the policies held by veterans of World War I may be payable in a lump sum.

The bill also provides that the veterans of this war may convert their national service life insurance into any policy that a veteran of World War I was permitted to convert his life insurance into. In other words, the present law permits veterans of World War II to convert their insurance only into ordinary life, 20-payment life, and 30-payment life policies. The amendment as enacted will permit them also to obtain 20-year endowments, 30-year endowments, and an endowment at 62, the same as veterans of World War I were privileged to obtain.

One of the greatest benefits the veteran of World War II will receive out of his service will be his converted life-insurance policy. Some veterans are declining the policies because the proceeds are not payable in a lump sum, and some are declining because they cannot obtain endowment policies. The enactment of this amendment will correct both of these objections.

I am also inserting herewith the text of the bill:

H. R. 5016

A bill to extend the types of insurance into which national service life insurance may be converted, and to provide for payment, at the option of the insured, of the insurance in one lump sum

*Be it enacted, etc.*, That section 602 (f) of the National Service Life Insurance Act of 1940, as amended (U. S. C., 1940 ed. title 38, sec. 802 (f)) (relating to conversion and exchange privileges), is amended by inserting after "Ordinary life, 20 payment life, 30 payment life" the following: "20-year endownment, 30-year endownment, endownment at age of 62, 5-year level premium term."

SEC. 2. Section 602 (h) of such act, as amended (U. S. C., 1940 edition, title 38, sec. 802 (h); Supp. IV, title 38, sec. 802 (h)) (relating to manner of payment of benefits), is amended by inserting at the end thereof a new paragraph reading as follows:

"(4) At the option of the insured, the insurance shall, in lieu of being paid in installments as provided in paragraphs (1), (2), and (3), be paid in one lump sum."

## McLean Gardens for Veterans

EXTENSION OF REMARKS
OF
**HON. JOHN W. FLANNAGAN, JR.**
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news articles:

[From the Washington Daily News of December 7, 1945]

HOMELESS VETS FAVOR BUYING M'LEAN GARDENS

Fed up with the lack of planning of public and private housing interests, 50 homeless veterans have already jumped at the plan of the local American Veterans of World War II to purchase the Government's McLean Gardens as a cooperative veterans corporation.

"This looks like the answer to our prayers," D. C. Dassford, Army officer on terminal leave and one of the 50, told the News. "My wife and I are so sick of being told we can't have an apartment because we have a 5-year-old child we're practically ready to decapitate all real-estate agents." Mr. Dassford, his wife, and baby have been living with his family since his return to Washington. "We'd like a place of our own for a change."

The plan to purchase McLean Gardens is one of desperation hatched last Saturday by Amvets' local post commander, Ray Sawyer, and their national legislative representative, Joe Leib.

TIRED OF RESOLUTIONS

"We just were tired of passing resolutions on the matter," Mr. Sawyer commented. "What good is a resolution that the Government should build 500 houses this year when 3,000 veterans applied to the war housing center and other public housing developments in the last month? They need houses immediately. Now that all the rosy promises of private enterprise and the Government have come to nothing, it's time for the veteran to get out and help himself—no one else is going to help him."

Mr. Sawyer, a lawyer with the Federal Communications Commission, has been back long enough to have purchased his own home, but he's willing to sell that and move into McLean Gardens to help the project get a start.

WAC BACKS PLAN

The 50 other veterans feel the same way. According to one ex-Wac who has been figurately slapped in the face with her own GI loan by almost every real-estate dealer in the city: "I can't see why a group of veterans couldn't work out a very good system of living together. We've been forced to cooperate with each other in many worse places under conditions that tried everyone's tempers. We certainly can get along well in a place like McLean Gardens."

NAVY MAN'S STAND

An ex-naval officer who is interested in the project has a family living in Chicago. "I spent a week with my wife and two kids when I returned from overseas, and 2 weeks when I was discharged. If I can't find a place here for my family, I might just as well be back on Guam." He particularly wants to see the project get under way within a month.

Although the plan has not yet crystallized, Mr. Sawyer hopes that all interested veterans will call the local Amvets' office, regardless of their affiliation with other veterans' organizations. "This isn't just an Amvet affair. It's something we think all of the homeless veterans around here would be interested in. Everyone who can obtain his Veterans' Administration guaranty of a $2,000 loan will have an equal say in the corporation and in electing the directors or appointing a manager for the project But that must come later."

As it now stands, the counsel for the group, Col. William A. Roberts, formerly people's counsel of the District, will meet with the Veterans' Administration to discuss the plan, see if it is feasible, and iron out problems that may stand in the way of the veterans.

McLean Gardens cost the Government $11,000,000 to build. Private real-estate interests told the News it "is highly unlikely" the Government would "realize its investment upon sale." There is no official policy yet about whether a veterans' group such as this would have priority on the purchase.

Again, there is the problem of the current tenants, whether the corporation would include them, whether they could be evicted, or whether the turn-over is heavy enough to insure apartments for a large membersip in the corporation. Mr. Sawyer hopes to be able to put the plan in operation with at least 350 veterans. There are 723 apartments in the development, which also includes 9 residence halls.

[From the Army Times of December 8, 1945]

AMVETS SEEK MASS GI LOAN TO BUY HUGE GOVERNMENT PROJECT

WASHINGTON.—The most ambitious GI loan project yet to originate with veterans or a veterans' organization was proposed this week by the District of Columbia chapter of the American Veterans of World War II and contemplates the mass purchase of the multimillion-dollar McLean Gardens housing project in Washington and cooperative operation of the 723-family, 1,347-dormitory project.

Raymond Sawyer, post commander of the Amvets District chapter, said this week that 723 veterans each with a GI loan of $2,000 could make the required down payment of $1,446.00.

Under the preliminary plans under consideration by a committee of the Amvets, veterans of World War II would be eligible to participate without reference to membership in any veterans' organization.

Col. William A. Roberts, former People's Counsel of the District and a veteran of this war, said that he had agreed to represent the Amvets' group in untangling the many legal questions and problems which are bound to arise.

Colonel Roberts said that the veterans' group was very serious and that a committee has been appointed to work out the details of the general outline.

The first hurdle, of course, will be the Veterans' Administration certificate of eligibility under which GI loans are approved. In the event the VA could hurdle the legal questions raised and approved such a mass loan, the veterans then would face the problem of obtaining the actual money in the private lending market and arranging a low enough rate of interest to meet the requirements of the GI bill.

If these two major obstacles could be hurdled, the problems of management and operation then would be raised.

Off-hand opinion in Washington predicted this week, also, that the veterans will face tough competition from Washington realty operators in their attempts to buy McLean Gardens if the project actually progresses to that stage. Unless the Veterans' Administration should intervene to delay the sale of the huge project, it is more than likely that it will be snapped up by private capital at the earliest opportunity.

The Government announced during the week that it plans intensification of an effort to sell six war housing properties in the District of Columbia area which cost $56,000,000. The Defense Homes Corporation said newspaper advertising this week would offer the properties. They include 4,907 apartments and 2,302 furnished rooms.

## Hon. Harry W. Bashore

EXTENSION OF REMARKS
OF
**HON. A. L. MILLER**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a radio address made by Lloyd C. Thomas over Station KGFW, Kearney, Nebr., December 16, 1945.

My remarks concern Harry W. Bashore, who is retiring as Commissioner, United States Bureau of Reclamation. Harry Bashore believes in irrigation. He

started the Scottsbluff irrigation district in western Nebraska in the early 1900's. He started as a chain boy and now, after many years of service, he is retiring as head of the Bureau of Reclamation. He is going back to Mitchell, Nebr., where he first planted some seeds of irrigation. From his efforts, we now have, in western Nebraska, one of the finest and largest irrigation areas in the country. Harry Bashore will be missed as the Commissioner of Reclamation, but he will be most welcome back at Mitchell, Nebr., where he expects to retire and make his home.

EXCERPT FROM A RADIO TALK BY LLOYD C. THOMAS OVER STATION KGFW, KEARNEY, NEBR., ON DECEMBER 16, 1945

Another old friend is retiring from his important Government office at Washington and returning to his home in Nebraska to retire. Harry W. Bashore, Director of the United States Bureau of Reclamation, with headquarters at Washington, has announced his retirement from Government service, effective January 1, and is returning to his home at Mitchell, in the North Platte, to live. He will be succeeded by Michael W. Straus, President Truman announced on Wednesday. Mr. Straus, First Assistant Secretary of the Interior and a right-hand man for Interior Secretary Harold Ickes for the past 13 years, said the change will have no effect on the multi-million-dollar development program in the Missouri Valley, which includes this area.

Harry Bashore said he was satisfied that the integrated program of the Reclamation Bureau with the Army Corps of Engineers for development of the Missouri Basin will proceed smoothly under Mr. Straus' leadership. Many of you listeners and hundreds of irrigation boosters in central and western Nebraska met Harry Bashore when he, in company with E. B. Debler, of Denver, in charge of district 7 of the Bureau of Reclamation, visited this area on an inspection trip last June, and when they were heard over KGFW while at Kearney.

The World-Herald of last Thursday published an editorial on Harry Bashore that is so good that I read it to you today. It was headed "Harry Bashore comes home," and reads as follows, I quote: "For almost 40 years Harry W. Bashore has been a part of the Bureau of Reclamation. That is close to the life span of the Bureau itself. He has grown up with it, starting as an engineer and ending as Commissioner.

"Now Harry Bashore has reached the retirement age and is coming back to the house at Mitchell, Nebr., which he has for many years regarded as home. He will be welcomed as a friend, neighbor, and valuable citizen of Nebraska. Few men know more about irrigation, its problems, and its potentialities than does Harry Bashore. He is an engineer and an expert, a career man in his field, and never a politician. He got to the top the hard way, probably because he knew more about irrigation than anyone in the Government. Without fireworks before congressional committees, he has managed to get his job done. He has seen the doctrines and the works of reclamation spread throughout the West." That closes the quotation from the editorial.

But just because my old friend Harry Bashore has resigned from the top post in the Bureau of Reclamation and returned to Nebraska to live, it is no sign that his work is done. He may have the privilege of taking life out here in his home State a little easier, for he deserves that, but there is a big job to be done here in Nebraska, with water available for an additional million acres of thirsty farm lands which are seriously in need of it. There is a wonderful opportunity for Harry Bashore here in Nebraska to give us the advice, aid, and assistance that we need in putting this water to work, and quickly.

Nebraska's average combined October-November rainfall was thirty-eight hundredths of an inch. It was the second driest period on record, according to a report last Monday by R. A. Dyke, State weather bureau chief. The dryness was exceeded only in 1933. That condition, my friends, ought to awaken us to the imperative need for the development of irrigation in Nebraska to the extreme limit. With millions of gallons of water rushing down the stream channels of our State every week on their way to the Missouri River and on to the Gulf of Mexico, it behooves us to get busy and spread them over our thirsty farm lands and to store them in our reservoirs, and to provide additional reservoirs for their storage and for the development of electric power before they are used for irrigation.

We need a man of the ability, caliber, and experience of Harry Bashore to lead us in our efforts for more irrigation in Nebraska. We need a man who talks common sense, as does Harry Bashore, to help bring together the warring factions who for years have watched each other with wary eyes, ready to dash at the throat of the opposing faction when a move is made for development, while the waters in our rivers continue to flow eastward and southward on their way to the Gulf. Harry Bashore can lead us out of the morass of controversy and conflict and onto the broad plains of development and use of our waters.

I haven't much to offer Harry Bashore to induce him to step in and help us out—to do the job that is waiting to be done here in Nebraska. But I can make my contribution, and here it is: I hereby tender my resignation as first vice president of the Nebraska Irrigation Association, the office to which I was elected at the annual meeting at North Platte on December 7; I tender it to the board of directors, the executive committee, on the condition that it be tendered to Harry Bashore and that he will accept it, for it will give him an official status. It isn't much to offer, Harry, for a man like you; but it is made in good faith and I hope you accept.

---

## Billions for Britain

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

**Mr. REED of New York. Mr. Speaker, the American taxpayer spent a billion dollars to build airports on British soil. Under the terms imposed by the British, our commercial planes will not be allowed to use these airfields after the war. Now, it is proposed to lend billions of our taxpayers' money to Britain—to do what? What use will Britain make of the proposed money if and when loaned? Why give the businessman of Great Britain better terms on a loan than our RFC would grant to a businessman in this country seeking a loan? When I say "loan," so far as money or credit to Great Britain is concerned, I mean an advance of money that will never be repaid. How many times must our people have their fingers burned by Great Britain and other foreign nations before deciding to resist these appeals for more and more of our taxpayers' money?**

Under leave to extend, I am inserting an article which appeared in the Journal of Commerce, December 19, 1945:

UNITED STATES AIR LINES FACE BARRIERS TO EXPANDING ROUTES ABROAD—STATE DEPARTMENT CONCERNED BY TENDENCY OF FOREIGN COUNTRIES TO FORCE BILATERAL AGREEMENTS ON RATES AND TRIP FREQUENCIES

(By Marshall W. Berger)

WASHINGTON, December 18.—A number of barriers to the expansion of world air commerce are now developing and are directly traceable, in the opinion of State Department experts, to the failure of last year's Chicago Conference to set up a multilateral agreement for international air transportation.

Among these obstacles are a marked tendency toward bilateral agreements and disagreement between nations as to rates and frequency of trips.

Although a general commercial agreement is now being negotiated between this Nation and France, and while Great Britain and the United States are committed by terms of the proposed loan to seek an early understanding of their aviation problems, it is in this very scramble for bilateral agreements that Government officials foresee restrictive effects on overseas air commerce.

UNITED STATES DOMINATION FEARED

Basically, the obstacles to expansion are developing from Europe's seeming fear that America will dominate the skyways, with the result that the former is determined to protect her economies and markets from penetration by the United States, it was said.

At Chicago, in the words of one State Department source, "No agreement on rates or traffic was possible because American representatives reached too far and British representatives refused to acquiesce."

The effect was to place these matters into a bilateral agreement category, with the result that some areas of the world will suffer tight restrictions on air commerce, others will have partial expansion, and still others will have complete freedom of the air, the source disclosed.

At Montreal machinery was established last October under which private carriers agreed to negotiate on rates to eliminate a rate war. Pan American Airways afterward dropped its rate to London to $275, and thereby necessitated further Anglo-American talks covering various phases of air transportation.

The United States proposed a permanent agreement to embrace all aspects of international air commerce, and Great Britain countered with a suggestion for working out a temporary arrangement exclusively for rates and frequency of trips.

VOLUME LIMIT SET

When PAA, under the $275 rate, was reduced to two flights weekly, it raised its fare to $375 and is now permitted along with American Overseas Airlines, 250 passengers per week.

Although both AOA and PAA representatives are of the opinion that the maximum of 500 passengers is ample at present, they both object to the principle of limitation and stress the point that it may retard manufacturing development.

In all of these unsettled matters, Senator PAT MCCARRAN (Democrat, Nevada) has found more and more ammunition for his All American Flag Line proposal, which would set up a community company of all United States overseas carriers. Strongest evidence of this lay in a report made public by a majority of the Senate Commerce Committee, emphatically urging adoption of the chosen instrument principle. Hearings on the bill are due early next year.

Pan American is believed to have made two significant points, meanwhile, in the setting of its original $275 fare to London. It charged that:

1. Rate setting by the International Air Transportation Association "is illusory" because a unanimous vote must determine the organization's action and "either American Airlines or British Overseas Airways could block the fare reduction proposed by Pan American."

CITE LOWER RATE

2. PAA stated that the proposed fare was an 8-cents-per-mile rate, which is higher than the rate "which American Airlines quoted to the Civil Aeronautics Board a year ago," when seeking a certificate to operate to Great Britain.

Still undecided, the rate matter is not expected to meet with a solution until IATA convenes in January on the North Atlantic traffic conference.

The only potentially bright factor in prospect is that the House Postwar Planning Committee saw fit to observe, after a visit to Europe, that United Kingdom's opposition to freedom of the air handicapped the expansion of American civil aviation. The United States, it was said, should "insist upon civil aviation rights for American air lines in return for the concessions which we are affording other nations."

As a result of the committee's findings, Capitol Hill sources predict that further discussions of air commerce problems will be raised in the House when the British loan proposal is sent there for ratification.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS

OF

### HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. HAND. Mr. Speaker, I respectfully suggest to the leadership of the House that the first order of business, when we reconvene, will be to deal with two further questions of vital interest to our fighting men. The first is demobilization of troops, and the second deals with the question of terminal leave.

With respect to the first question there are a large number of bills now pending in committee. I introduced a bill on October 4, 1945, which I think is a good bill, but I have no special pride of authorship, and the problem is for the committee to take all of these bills, give them attention, and, if necessary, write a new bill combining the best features of them. Notwithstanding the reduction in points announced by the service this morning, a serious injustice is being done to a large number of men, whose service has been long, but who still are not eligible for discharge under the point system. Those of us who are interested in this legislation—and I think that includes a majority of the membership—should demand action on this subject.

On the question of terminal leave, the same situation prevails. There are a number of bills pending, none of which have been reported. It is so clearly un-American to discriminate between officers and the enlisted men, so obviously an unfair discrimination, that we have a right to expect action on this in January.

Mr. Speaker, some newspapers have seen fit to say that their Congress has been on a sit-down strike because all the legislation suggested by the President has not been immediately approved. Congress is not sitting down; Congress is being held down by our procedure, and particularly by the committee system. The events of the last 2 weeks, and particularly the last 2 days, very clearly shows that Congress can and will dispose promptly of legislation, no matter how controversial, if the leaders who control the calendar will bring the legislation before us. Members of this House are perfectly willing to stand up and be counted. You will find, sir, that if the committees report the legislation which the country needs, and the leaders put it on the legislative program, you will have no trouble getting action from the House as promptly as we have given it to you during the last few days.

Give us the chance to act on these two bills in January, and you will see how quickly the House passes them.

## Silver Money—Eternal Misrepresentation

EXTENSION OF REMARKS

OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. WHITE. Mr. Speaker, why cannot the publications of the country tell the truth about silver and its use as money? Surely our leading newspapers and periodicals have a responsibility to their readers and the people of this country to tell the truth and give the facts in printing articles on this subject. The facts concerning money and the use of the precious metals, gold and silver, in the Nation's monetary system are available to anyone in the daily and monthly publications of the United States Treasury. The stability of the purchasing power of our money and the security of our national economy should transcend any financial advantage to be gained by any organized group, be it bankers, jewelers, or manufacturing jewelers. It is time that the patriotism of our publishers should bring them to the assistance of the Government and the Congress in working out and giving our country a sound, workable, and adequate monetary system. In this connection there is submitted herewith a letter from a former New Yorker, now of the West:

SPOKANE, WASH., *December 14, 1945.*

FORTUNE MAGAZINE,

*New York City, N. Y.*

To the EDITORS: Shame on you for using in your December 1945 issue that puerile and corny Hi-Yo Silver title, which was already worn out when Time magazine used it over 5 years ago in March 1940!

I realize the utter uselessness of trying to get your magazine or any other eastern publication to give the facts about silver. I also realize, of course, that many of your leading advertisers are primarily interested in a lower price for silver, which would give them a larger profit for their products. (I am well aware that the advertisers' willingness to take big ads is not supposed to influence the editorial and news columns, but human nature being what it is I know that it does so either directly or indirectly.)

Your Hi-Yo Silver article is full of inaccuracies, with at best a few half-truths. For example, your statement "It (the silver Senator's bill) would only swell the already mountainous stock of sterilized silver in the United States Treasury." What do you mean by the word "mountainous" as applied to the silver stock?

If it is now mountainous with only about 450,000,000 ounces (silver bullion), what was it when it amounted to nearly a billion and a half ounces? Incidentally, it is extremely fortunate that we had accumulated this silver to draw upon, otherwise the atomic bomb could not have been produced. Did you know that over 450,000,000 ounces of silver were utilized in the development of the atomic bomb?

You say "silver (is) a commodity that would not be genuinely short in a free market." Well, the answer to that is it was short toward the end and following the First World War when there was a free market in silver; and silver advanced to a high of $1.37½ an ounce and averaged around $1 an ounce for a period of about 4 years without any legislative help. This, also, occurred at a time when the United States, Mexico, Canada, and other countries were producing large amounts of silver. Morover, the industrial demand for silver at that time was very small compared with present industrial consumption and indicated future consumption.

You are also wrong in your assumption that present silver production is primarily due to a shortage of labor. Would you be interested in knowing what the real facts are? Mr. Ickes' Bureau of Mines could give you part of the answer, and I can give you the complete answer if you really want it. Fortune, why not set an example for other magazines and for one time at least give your readers a fair, unprejudiced article on silver? Even the devil is entitled to his due.

Very truly yours,

FRANK LILLY.

## Address Delivered by Hon. Albert Rains, Member of Congress, Fifth Alabama Congressional District, to the Alabama Baptist State Convention

EXTENSION OF REMARKS

OF

### HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. HAYS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by Hon. ALBERT RAINS, of Alabama:

I am happy for this cherished privilege to address this great convention on the timely and paramount subject Factors That Will Make for Peace in the New World Era.

Victory over our enemies has come to us at the end of a bloody and horrible nightmare in our history. Our enemies in the holocaust just ended have found that the way of the transgressor is hard; that the wages of sin is death; and that he who lives by the sword perishes by the sword. To us, out of the tears and suffering of armed conflict, comes now the great opportunity for peace. Also appears the perplexing problems and complex situations which must be met and solved if we are to attain the goal for which we sacrificed so much in blood and treasure, an enduring peace. Out of the smoke and carnage of battles fought and

won by the might of American arms, comes also the unsought, but ordained role of world leadership for our country. But let us have a brief but true appraisal of the world situation—we have won the war, but do we have peace?

Nearly 6 months have gone by since the full and unconditional surrender of Hitler's evil and arrogant Germany, in a red brick schoolhouse in Rheims, France. Nearly 3 months have passed since the historic occasion on the battleship *Missouri* in Tokyo Bay, marked the unconditional surrender of the once proud, empire-stealing, imperialistic Japan. Yes, our enemies have been ground to dust, and yet the sword has not been sheathed. All over the world today may be heard the sound of clanging armor, the roar of military might. The dove of peace has settled in no land, and the olive branch is not accepted. We fought for a world in which justice, right, and reason would prevail; a world in which aggression and oppression would be no more.

Our hopes were high and our hearts were happy when the delegates of the nations of the world to the San Francisco Conference adopted the United Nations Charter, whereby the world was to be committed to peaceful methods of resolving disputes between nations and the rule of force and might was to be outlawed. But nearly 6 months have gone by since that momentous occasion, and only the United States and a few other liberty-loving nations have formally adopted the United Nations Charter. It leads all of us to anxiously contemplate the query I so often hear, Is this but an armed truce, or is it finally the beginning of the long-awaited era of peaceful relationship between nations? Surely a world torn to shambles by war should now know that an enduring peace can be built only on trust, confidence, liberty, and justice.

I hasten to say, then, what all straight-thinking men know, the one factor which will contribute more to the building of a peace in this troubled new-world era is trust and confidence, not oppression and overpowering military might.

Enshrined in the heart of every American soldier as he fought in battles all over the world was the firm belief that he was fighting for the "four freedoms" which were enunciated by the late President Roosevelt in his address to Congress on January 6, 1941, as the goal for which we fought—"Freedom of speech and expression; freedom of every person to worship God in his own way; freedom from want, which translated into world terms, means economic understandings which will secure to every nation a healthy, peaceful life for its inhabitants; freedom from fear, which, translated into world terms, means a world-wide reduction of armaments to such a point and in such a thorough fashion that no nation will be in position to commit an act of aggression against any neighbor."

It was the impetus of an unwavering belief in the justness of our cause which brought us victory. If then, my friends, our belief in and our love for the ideals of right and freedom and justice brought us to victory in armed conflict, it certainly follows as a logical conclusion that the operation of the same great principles will bring a solution now to the problems which beset the world.

David Lawrence, well-known journalist, recently said, "When a nation as a whole turns toward the spiritual, something of transcendent significance has occurred. We saw it happen on D-day. There was a distinct difference in the mood of the American people as between Monday and Tuesday, June 5 and 6," he said. "On Monday the Nation went about its affairs as usual. On Tuesday there was tension, anxiety, worry; and at night an extraordinary thing happened—the President of the United States led the people in prayer, communicating it to tens of millions by means of the radio networks. Back of that signal change of mood within 24 hours is the key to the future behavior of nations, the future steps that must be taken if the next war is to be prevented. For in that single day the Nation recognized the importance of spiritual help."

So must we, in this uncertain hour, rely on spiritual help.

The peoples of the world must come to know that to live in peace is to live in mutual respect, that peace comes from a fundamental regard for human rights, and a full appreciation of the dignity of the individual. To my mind, no greater or more essential basis for human cooperation and understanding was ever written or spoken by man than the statement from the preamble of the Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

In the bomb-wrecked, smoking, burning cities of Hitler's Germany, in the closing days of the war, I saw the complete wreckage not only of the material things of a nation, but of a people who had lost their faith in God. I saw them in their utter helplessness, in orderless thousands tramping the roads and highways of Germany, hunting in vain for a place of refuge from the evil god of war which they had erected and which they worshiped. I saw the awful suffering and the inhumanity which they wreaked on the helpless people in the horror holes, and rot-dens called concentration camps. I saw the degradation and destruction which follows in the wake of the disaster which always befalls a nation which forgets that righteousness exalteth a nation, but sin is a reproach to any nation. I saw the starving, dying, and dead victims of intolerance—I saw Buchenwald. It is near Weimar, the home of Goethe, Schiller, and the birthplace of the first German Republic. My mind revolts now in the memory of the spectacle of literally hundreds of human beings in the last stage of dysentery and tuberculosis, and of starving people, raving with typhus fever. This particular death camp had a death quota a day of 80, and unless this number died of starvation, disease, the death rate was supplemented by hanging, crucifixions, beatings, and stabbings.

To recount as an eyewitness the unspeakable horror and cruelty of a German concentration camp could be of no benefit now except to emphasize the fruits of intolerance—the product of godless, cankered souls. Tolerance, a fundamental factor in achieving a lasting peace, cannot be attained at the peace tables of nations alone—but in the classrooms of the schools, the pulpits of all the nations, and in the secret places of the hearts of the peoples of the world.

Last week in company with a congressional committee, I visited Oakridge, Tenn., a place much in the news in recent weeks, for it was there that American scientists perfected the atomic bomb. Our scientists and technicians now tell us that the atomic bomb which completely obliterated Hiroshima and Nagasaki is but a firecracker compared to the ones now being developed.

Recently, in the House of Representatives, a Member of the Military Affairs Committee, in discussing the terrible and destructive possibilities of the atomic bomb, said: "It is impossible yet to estimate even on the basis of conjecture the ultimate effects of the gigantic blasting force and flaming destruction yet to emerge from the minds and laboratories of science and the mills and machines of manufacture. At this very moment, however, it is now possible to drop or to propel atomic charges into our large cities so as conveniently to kill millions of unsuspecting inhabitants in one operation."

"We have seen reports and photographs from both Hiroshima and Nagaski. We have seen reports from New Mexico. No further evidence should be necessary to shock the minds of men into realization that the diabolical inventions of war, once confined to Sunday newspaper supplements and comic strip cartoons, are now the grim realities of present day existence. For the first time in the history of this once isolated Nation we now live in the shadow of the fear of attack. Other peoples in other lands have tasted this deadly fear in their daily bread—those living on the borders of the turbulent nations of Europe or in the vast areas of the world where civil war and the ways of marauding and aggression had become the pattern of life. To us who have walked upright without fear the realization that our traditional ocean barriers of defense no longer separate us from potential enemies embodies a profound change in the deep rooted habits and convictions which have motivated our individual and national actions.

"In the event of another war, it is now probable that warfare will be waged by a mere handful of men on each side. Atomic bombs, radar, rockets, and robot airships would be directed against the urban centers, the industries, the communication and transportation facilities of a nation. The object will be to paralyze and to obliterate. Gone will be the maneuvering of troops, of gallant last stands of armies. There will be no skirmishing, no attacks and no counterattacks. There will be no diplomatic formalities, no declarations of war, no negotiations. There will be only sudden, unannounced, and devastating, death-dealing attacks—huge rocket-propelled bombs hurtling through the upper regions of the strathosphere at the push of a button."

I saw the devastation wreaked on London with the rocket and robot bombs. We have seen in this war the development of electronics, of which radar is one outstanding accomplishment. We know now the destructive power of atomic energy. It takes no prophet to imagine how easy it is now, and yet these terrible weapons are still in the pioneer stage, to send these explosives over oceans and continents and explode them with devastating accuracy on the other side of the world.

The consequences are appalling. What will be the result? The development of the atomic bomb means only one thing—civilization cannot survive another war. Fearful and horrible and terrible as it is, the atomic bomb is a compelling factor for peace in this new world era. This is the hour on the clock of time when the men and women of the world should know that wars are needless, and must now know that another war is unthinkable.

Because of our position of leadership the economy of the world is the concern of this Nation. Wars are born out of depressions. Except for panic, frustration, and uncertainty, an Austrian sign painter would never have become such a terror to the world. Hungry people are dangerous people. Cognizant of that fact, we cannot lightly consider, for that matter, we cannot fail, to share with the suffering, hungering, war-weary peoples of the world the products of this bountiful land of plenty. I do not mean to say we should recklessly and hastily extend loans to the nations of the earth who today are clamoring at the door of the United States Treasury. If we are to hold this world together, we must maintain not only our position of influence as a moral force but we must retain our position of affluence as a financial force. Once the United Nations Organization is a living, moving, working force for peace in the world, then we should consider long-term loans to the other nations. I recognize fully our duty and responsibility to assist wherever possible in the rehabilitation of the countries. I think it an important factor in the establishment of world peace for us to have the assurance of good faith on the part of the other nations by the full and complete acceptance

of the San Francisco Charter as a condition precedent to the extension of long-term loans.

I have been greatly disturbed by the refusal of the other United Nations to follow the lead of the United States in the adoption of the Bretton Woods proposals for the stabilization of currency and for a world bank whereby aid and financial assistance will be provided on an orderly basis to all. One noteworthy factor which will contribute to a sound economic condition in the world is provided in these agreements. I, therefore, point to the need and necessity for the full cooperation of all nations in the Bretton Woods Agreements.

As I stand here contemplating all the myriad elements which can contribute to the peace we so fervently want, my mind and heart keeps hearing the plaintive, moving plea of our honored dead. Surely the people in their quest for peace must feel and be motivated by the power and force of supreme sacrifice marked by the endless rows of white crosses.

There is an apt and significant story in II Kings, "Elisha died, and they buried him. And the bands of the Moabites invaded the land at the coming in of the year. And it came to pass, as they were burying a man, that, behold they spied a band of men; and they cast the man into the sepulchre of Elisha; and when the man was let down, and touched the bones of Elisha, he revived, and stood up on his feet." This story likely belonged to the folklore of many generations and was recited by the firesides of homes and in the market places of villages and towns.

Elisha was one of the truly great men of all time. He was a leader at the court of six succeeding kings. The enemies of his country feared him. When they were tempted to invade the land, they thought of Elisha and changed their plans. It was said that he was worth more than a thousand generals. The people felt secure as long as Elisha was near. Then, the day came when the great patriot of indomitable spirit died.

But enemy armies were still fearful of the land in which his body was buried, and his countrymen still believed that his spirit protected them. So, the story was told to friend and stranger of how a man was dead, touched the bones of Elisha, was revived, arose, and walked again. It was their expression of a great truth which the centuries have affirmed—the power and force of the noble dead.

Russell Davenport in his great book, My Country, writes of the immortality that belongs to those who die that wars might cease.

"On the shore where the stiff white crosses
work a design for eternity,
And the infantry of sleep is forever enrolled
in silence,
And the lives of men are but numbers, and
alien wind
Comes up to the beaches, caressing
The fallen sons of a distant country:
Here, at last the meaning of truth and freedom
Opens, unsealed, before the eyes of the
nations:
Where death has merged the memories of
Maine and Nebraska,
Of Indian fires in the desert, of bearded
live oaks,
The motion of Texas grass when the wind
is moving,
The dusty roads that lead to schools and
churches.
Here they merge like a stream—ranches and
orchards,
Court houses, banks, shops, railroads, and
factories,
Memories of faces, of lips parted with passion,
Of hands like sunlight on the nerves, of hair
fallen
Over the shoulders of someone beyond the
ocean.
Here in the name of freedom all have been
gathered
Into the perfect union of purposes united—
A brotherhood of men in the arms of death.
Let us live therefore, in the name of those
who have fallen,
That in our lives they may be resurrected:
Let us search for the light by which to find
them
Within ourselves and in our another."

Unmistakably the sacrifice of all the gallant men and women who died in battle is one of the great contributing factors to world peace.

Recorded in the musty annals of the Constitutional Convention, which met in Inpendence Hall in Philadelphia in 1798, is an incident which the statesmen of the world should ponder today.

The Constitutional Convention was deadlocked. Strong-willed and stubborn men were in constant disagreement. The Convention called for the purpose of writing a constitution for the young Republic, was about to break up in failure. The cause of a Union of free and independent States seemed doomed. When further progress appeared hopeless, wise old Ben Franklin arose. He concluded an eloquent plea for the resolvement of differences with these memorable words: "I have lived, sir, a long time, and the longer I live the more convincing proofs I see of this truth—that God governs the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it probable that an empire can arise without His aid?"

The delegates listened in bowed silence, then broke into applause. Franklin's speech and Washington's timely support, brought almost unanimous action for the pending motion and it was carried. After that God's assistance was invoked every day. Gradually doubts vanished, the light of understanding broke on the convention and a constitutional form of government never before equaled on earth came into being. From that day on down to the present it has been the same. No real American has thought himself too great to seek the aid and assistance of the Father of all men. And the world never needed to go to her knees more than now.

Finally the world must come back in repentant humility to God. There is no other way to an enduring peace. Out of the Book of Psalms comes the blessed assurance "He maketh wars to cease unto the end of the earth; he breaketh the bow, and cutteth the spear in sunder; he burneth the chariot in the fire. Be still and know that I am God: I will be exalted among the heathen, I will be exalted in the earth."

So true and in point are these lines by Esther Baldwin York:

"There is a Stranger in the council hall
Where nations meet to plan the peace
again.
He sits unnoticed by the farther wall,
His eyes upon the leaders among men.
His ears attend their clearly laid designs
For living in tomorrow's homes and marts,
As though beneath their spoken words and
lines
He hears the inner voices of their hearts.

"But when the delegates of all the world
Have cried their million wants, and lists
are long,
And after blueprints, charts, and plans are
hurled in varied protest at the core of
wrong,
He is our hope; He is the peace we seek.
O listen, world, and let the Stranger speak!"

My friends, I can close with no better words than the high hope expressed by Gen. Douglas MacArthur on the occasion of the Japanese surrender, "It is my earnest hope, and indeed the hope of all mankind, that a better world shall emerge out of the blood and carnage of the past—a world founded upon faith and understanding—a world dedicated to the dignity of man and the fulfillment of his most cherished wish—for freedom, tolerance, and justice."

## Homeless Jews Need Assistance—Passage of H. R. 466 Will Be Helpful

EXTENSION OF REMARKS
OF
### HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. KEFAUVER. Mr. Speaker, I wish to congratulate the Committee on Foreign Affairs for reporting this resolution. I feel certain that it will pass the House by almost a unanimous vote. I appeal to the membership to pass this resolution, as it is high time that we gave notice of the attitude of the American Congress in this matter.

No nation can escape its share of the dreadful responsibility for what has happened in Europe. Millions upon millions of Jews were killed, many after horrible tortures, for no reason whatsoever except their religious belief. It was impossible for us even to believe or imagine that such dreadful acts could be perpetrated on such a large scale by maniacs led by a diseased mind. Today, we plead for the lives of a hundred thousand Jews who are no more than living skeletons, whom we have liberated in Europe. They can find no peace in the places they once called home. Germany, the Balkan countries, central Europe are not places of refuge for them.

Surely the British Government, in the face of a necessity of the settlement of this problem and in the face of an expression of the Congress of this country, will grant the request of our President for increased immigration to Palestine.

## Unification Neurosis

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. ANDERSON of California. Mr. Speaker, with all due deference to the President's recommendations for the unification of our armed forces I wish to express the hope that on this highly controversial and extremely complex subject the Congress will make haste slowly. This is no time to go off the deep end only to emerge with an unwieldy and perhaps entirely unworkable millstone around our collective necks.

For most of us the primary objectives would undoubtedly be the elimination of costly duplication and waste, better coordination of command from top to bottom, and vastly improved efficiency. In seeking these highly desirable results, however, let's not take any action that

would break up the highly developed combat teams that were perfected while the last war was being fought. The spirit of competition that led to our superiority on land, sea, and in the air must not be dulled.

In this connection, Mr. Speaker, I wish to commend to my colleagues the following well-written and thought-provoking editorial from the San Francisco Chronicle of December 1, 1945. While I do not entirely agree with all the observations contained therein, I am profoundly impressed with the general tenor of the article:

UNIFICATION NEUROSIS

The pell-mell, hell-for-leather campaign the War Department has been waging to convince the Congress of the urgency of merging the Army, Navy, and Air Force under one command appears somewhat too purposeful. The Army's thesis—the dire need for enforced cooperation in planning, thinking, and execution in future wars—is too glib, too pat. The time for slam-bang action is behind us for the moment. While we're still in the planning stage, let's deal ourselves into the discussion. For it isn't the fate of the Army or the Navy that's being decided. It's the fate of the American people at stake in the upshot of this and a few other vital issues of the day, and it's up to the American people to view them squarely and make their own decisions.

So let's take a little time out and study this proposal. The Navy, opposing the merger and thereby acquiring the label of "obstructionist," has a good deal on its side of the dispute, and there are a few arguments strictly on behalf of the public which the distinguished witnesses of neither side have touched. No uniformed witness has yet said: "Let's put our own houses in order and see what happens." Probably none will. No housewife is going on the witness stand and admit she's a sloppy housekeeper. Nevertheless, it needs to be said, for there has been some sloppy housekeeping by the same people who are doing the loudest yelling about the other fellow.

ARMY PROPOSAL

The Army proposes, briefly, that a single Secretary of National Defense be created to supplant the present twin Secretaries of War and the Navy. This Secretary would have as his military chieftain a Chief of Staff of the Armed Forces, who would control the three principal sections: the Army, the Navy, and the Air Force.

The advantages from such a reshuffle, the Army holds, would be threefold: National security would be implemented by the streamlining of the command situation; money would be saved the American people by elimination of duplication of effort; and, finally, the Air Force would be given prestige and opportunity to develop, commensurate with the stature it achieved during World War II.

Counterwise, the Navy contends that we won the toughest war in our history with the present set-up; that in any unification, the Army, numerically superior, would emerge with a controlling interest, and that the Army, in its haste to push through a merger, has advanced a skeleton plan without thinking it through into the detail stage.

Around these basic arguments, each side has scraped together a mass of testimony aimed at bolstering its own cause. The Army has pointed the finger of horror at Pearl Harbor and said: "With unified command it couldn't have happened." It has paraded ex-Chief of Staff Gen. George Marshall to relate that under the present Joint Chiefs of Staff system, valuable time was wasted through bickering, even in wartime. It has pointed to great monetary waste—unquestionably the greatest peacetime consideration of a vote-wise Congressman.

Frankly, these arguments can be knocked down like tenpins.

FAULT LIES DEEPER

The Pearl Harbor inquiry has proved, to any unbiased observer, that the fault for the disaster lay far deeper than the military commanders. The inquiry has already traced the fault to the White House and the State Department, but it goes even deeper than that. The fault lay with the American people themselves. We sat by, almost every man jack of us, like a row of fat sparrows on a limb, twittering: "They'll never do it—they haven't got the guts." Then they did it—and we were dumbfounded. No; the fault does not lie primarily with Short and Kimmel. Practically all America had its head in the sand.

As for the present system, there seems little doubt that a lot of time was wasted in bickering and pettyfogging in high quarters while the war hung in the balance. But the bickering was by no means limited to interservice disputes. There were plenty of minor beefs between colonel and colonel, admiral and admiral, arising from heaven knows what trivial source, while the major war issues waited to be settled.

PRESIDENT'S STATUS

Would the superimposition of a single Secretary of the Armed Forces and a single Chief of Staff automatically correct the situation? It hardly seems likely. Consider, first the proposed Secretary. Who would he be? Well, he would be a political appointee of the President—whoever the President might be at the moment. The Navy has argued that the Secretaryship would be too big a job for one man—to which General Eisenhower, following the best Army thinking, replied, sarcastically: "Then it follows that no man has the capacity to assume the Presidency of the United States."

Such an assumption does not follow for one moment. The President is elected. The Secretary is appointed. When a man steps into the White House, whatever his antecedents or background, he steps into a position unique in all the world—a position which carries its own great heritage of tradition and obligation. These cannot but make themselves felt to the newcomer to the job—they are potent enough to pull him up by his bootstraps and impel him to submerge his own petty leanings out of sheer awe for the position he occupies and the job that confronts him. That is the Presidency of the United States. A Cabinet member, answerable to just one man, has no such ready-made heritage. There is a world of difference.

No; we can hardly assume that the Secretary of the Armed Forces is going to be in all cases a great statesman. It even seems possible that under some circumstances he might be simply a plodding politician who made good. Such men are seldom fitted to fill the shoes of a Solomon. The same possibilities exist, of course, in the selection of War and Navy Secretaries under the present system. But under the present system they balance each other, and there is the assurance that both viewpoints will be heard by the man elected to balance the viewpoints—the President.

ECONOMY DELUSION

Similarly, there is no assurance, under the Army plan, that the single Chief of Staff would be a totally unbiased individual. He might be an Army man or a Navy man or an aviator; assuredly, he would not be all three. The opportunities for prejudice are patent. Indeed, it is doubtful if the Army would be bringing anything like its present fervor to the dispute if it thought there was any chance of the Chief of Staff turning out to be a Navy man. And the Navy's bleak view of the proposal is admittedly flavored by its knowledge that the top dog will assuredly be a West Pointer.

As for the money-saving phases of the Army's proposal, we have seen no detailed break-down; nothing, indeed, beyond General Eisenhower's bland suggestion that under the proposed merger the defense of the Nation could be carried out with 25 percent less men. This is a rather picayunish item. The great money waste in the past war was not in the number of men employed in the services—it was in the material purchased and thrown away. The simple expedient of the installation of a trained civilian fiscal officer in each of the bureaus of each of the armed services could save more money than the dismissal of half of our fighting men from the Army and Navy.

Establishment of a separate Air Force has been urged since long before the war, on the ground that such a move would unfetter the airmen from the grasp of their more stodgy sister services.

It is not as simple as that.

Army Air Force operations consist of two functions—tactical and strategic. The strategic air force, with its more or less independent mission of softening up objectives and crippling production, could probably thrive as a separate unit without any great difficulty. In fact, it does right now. The tactical elements, charged with close support of ground forces, can never be separated from its earth-bound brothers, except in name only. The student can find this lesson in the war history of Britain's RAF.

The naval air arm, to an even greater degree, is inextricably entangled with the operations of its sister units on the surface. To wrench the two apart would be a step in precisely the opposite direction from that in which the unification forces claim they are moving.

Anyone who has watched at first-hand the wartime operations of carrier air groups in the Pacific knows the synchronization is such that ships and planes perform like appendages of the same well-trained body. The communications, the parlance, the systems of navigation, indeed, a great part of the training are common to airman and sailor alike. The naval aviator, flying hundreds of miles from his carrier, needs more than his briefing instructions to insure his safe landing. He has to know the skipper of his ship like a brother.

Maybe the Navy at large has been blatantly guilty of too much battleship thinking, but with it all the Navy has perfected in its air arm one of the most efficient weapons the world has ever seen. Let's give them the credit they've earned, and let them carry on their good work their own way.

MARINE ESPRIT

Given its head in the latter part of the war, the naval air arm performed wonders; so did that other semi-independent branch of the naval service, the Marine Corps. This highly specialized, hard-hitting, fiercely proud little band of fighting men has earned with its blood the right to special consideration in the high thinking going on over the future of the armed forces. The Army has kissed off the matter with an off-hand aside: The Marine Corps will go on functioning as it always has. But this could hardly be true in a situation which found the corps the underling of both the Army and the Navy. We hold the Marine esprit de corps a vital element in the corps' efficiency, because we have seen it at work. There was the company of marines on the Tarawa sands, fingers slipping from the ten-

uous hold on the precarious beachhead they had gained, brought abruptly back into the fight by the barked words of the commander: "Damn it, you're marines." They took that beach and held it, in the same spirit and with the same dash by which they accomplished every really tough amphibious mission in the entire Pacific war. We cannot well afford to throw away this spirit, forged through a century and a half of training and tradition.

NAVAL TECHNOLOGY

There are other more obvious factors which tend to bolster the Navy's insistence upon maintaining its own identity—differences in function, in ordnance, in transport. The Navy wants to answer to no Army man in its determination of how best to fight a sea battle or install a turret or run a ship, and it fears—with good reason—that it might run precisely into that situation. But deeper still is the fear that an Army-minded Chief of Staff and Secretary would not put forward the most convincing arguments, at some future date in a more complacent era, as to why the *Essex*, the *Bennington*, the *Yorktown*, the *Iowa*, the *Missouri*, and the *New Jersey* should not be scrapped in another wistfully hopeful cheek-turning gesture.

No one can quarrel with the basic aims set forth by both the Army and Navy in advancing their arguments. In this age of split-second warfare the best defense is none too good, and in this age of cosmic taxation any legitimate economy is not to be kicked around.

But somehow the whole argument about the means of effecting these aims has gone wide of the point. The expert witnesses being paraded before the congressional committee are necessarily biased, and unconsciously tend to argue for the best interests of their individual services rather than for the best interests of the Nation as a whole.

The real troubles are not going to be solved by a shotgun wedding of the armed services at the top. The wedding, like most such, would be a far from happy one.

For harmony, like genius, is born, not made. Liberalize the curricula of the service schools, bringing a little of the Navy viewpoint into the Army classrooms and the Army viewpoint to the Naval Academy—and the aviation viewpoint to both—and you'll have gone a long way toward promoting that harmony.

Next throw out the military promotion systems. No man can do his best work knowing that his wife's unthinking slight to his C. O.'s girl friend may curtail his career 10 years hence. The selection systems are as vicious as they are outmoded. Devise a system whereby merit is the sole basis for promotion—a system under which a military man can with impunity "take his finger off his number," and you'll step up the efficiency of the whole military organization.

And finally, in our liberalization policy, let's inject more international and scientific thinking into the services. At present there's no place for a physicist or a political scientist in the armed forces, and it looks as though these rather abstruse sciences are going to be suspect of the military for some time to come. In view of the fact that such men of science are going to determine in large part not only whether we get into a future war, but whether we win it, it would seem that a few of the stars should be reserved for their shoulders.

If the armed forces bethink themselves as earnestly about setting their own houses in order as they now appear to be thinking about the dwellings of their neighbors in service, unification will cease to be a label and become a fact—whether there is one top secretary or a dozen.

## Palestine—Jewish Homeland

EXTENSION OF REMARKS
OF
### HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. HOLIFIELD. Mr. Speaker, I rise in support of House Concurrent Resolution 113 which indicates to the whole world where the American Congress stands on the Palestine question.

In supporting this resolution I am not unaware of the complicated aspects of the Arab-Jewish problem in Palestine. I am convinced, however, that such differences as exist have been magnified by special groups and can be settled by compromise and cooperation if the big nations so will.

The commitments of the Balfour Declaration of 1925 should be carried out by the British Government.

But in our evaluation of the British attitude, let us not forget that we are asking the British to open the doors of a mandated territory while we citizens of the United States have consistently refused to open our doors to the persecuted minorities (particularly the Jewish refugees) and let us not in our smugness and self-righteousness cast the first stone. We are in no position to condemn England unless we play the hyprocrite with our tongue in our cheek.

## Surplus Property for Veterans

EXTENSION OF REMARKS
OF
### HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include therein resolutions adopted by Hollywood Post, No. 92, Hollywood, Fla., and by the D. N. McQueen Post, No. 103, of the State of Florida, American Legion, Punta Gorda, Fla. Similar information has come to me by letters, telephone, telegram, and resolutions and it is my desire that the Members of Congress know the situation as it exists in my State with regard to veterans being unable to purchase surplus property. I appeal to the Members of this Congress for their cooperation in bringing about a program to assure the servicemen of a priority and first opportunity to purchase surplus property.

The resolutions follow:

Whereas Congress has promised veterans of World War II a priority in purchasing surplus war property; and

Whereas millions of dollars worth of surplus war property has been sold in Florida to wholesale dealers; and

Whereas not one veteran of World War II in Charlotte County has been able to buy a single dime's worth of surplus war property, although many have tried for weeks to do so; and

Whereas the agencies charged with the responsibility of disposing of surplus war property in Florida have regularly given wholesalers lists of available property but have refused to permit veterans to see a list of vailable surplus property; and

Whereas wholesalers are permitted to inspect all war property offered for sale, and after inspection to purchase the better quality articles and the only property shown to veterans as salable property is property that has been rejected as undesirable by wholesalers: Therefore be it

*Resolved by D. N. McQueen Legion Post, No. 103, the American Legion, of the State of Florida*, That the commander of this post be instructed to call to the attention of each Member of the Florida congressional delegation the run-around being given Florida veterans in the disposition of war property in Florida, and that the Florida congressional delegation be requested to introduce such legislation and conduct such investigations as are required to remedy this situation; and be it further

*Resolved*, That the commander report to this post any response observed on the part of Florida's congressional delegation.

CLARENCE COLEMAN,
*Commander.*

---

Whereas Congress has promised, and thereby obligated itself to give to veterans of World War II, priority in purchasing surplus war property; and

Whereas surplus war property to the value of many millions of dollars has been sold and disposed of in Florida, to wholesale dealers without affording veterans a fair and reasonable opportunity to purchase such property; and

Whereas the agencies charged with the responsibility of disposing of surplus war property in Florida have regularly made available to wholesalers, lists of property to be sold and have by subterfuge or otherwise refused such lists of available surplus war property to veterans; and

Wholesalers are permitted to inspect any and all war property offered for sale, and after such inspection, are allowed to purchase the better quality articles before the veterans are afforded an opportunity to purchase, and thereafter, veterans are magnanimously offered the rejected and undesirable articles which the wholesalers have deemed undesirable and unfit for them to profitably purchase and have refused to buy; and

Whereas the methods of procedure and tactics of the agencies, charged with the responsibility of disposing of surplus war property, are patently and on their face contrary to the wishes and desires of Congress, as promised to veterans, and are seemingly to the interest only of those favored sons, whom such agencies desire to have the goods: Now, therefore, be it

*Resolved by Hollywood Post, No. 92, American Legion, of Department of Florida*, That the commander of this post be instructed to call to the attention of each Member of the Florida congressional delegation, in such manner as he sees fit, the existing condition of affairs and the ignoring of Florida veterans in the disposition of war property in Florida; further, that the Florida congressional delegation be requested to take such immediate steps as may be necessary and to introduce such legislation and to conduct investigations as may be required to remedy and to right this iniquitous and deplorable situation and wanton abuse of the privileges and rights given by Congress to veterans; be it further

*Resolved*, That the Florida congressional delegation be requested to introduce a measure, or measures, imposing a penalty upon those agencies and persons connected therewith who, after investigation, are found guilty of wrongdoing, discrimination, and abuse of their offices in the matter by not permitting inspection and purchase of goods by veterans, either single articles or in lots, and that they be indicted by our Government, and upon conviction be fined and imprisoned and branded as avaricious, greedy ingrates; be it further

*Resolved*, That legislation be enacted empowering and authorizing the punishment and imprisonment of purchasers of surplus war property where it has been established that such purchasers have knowingly bought property prior to said property first having been submitted for inspection and offered for sale to all veterans requesting the privilege and right to purchase, either single articles or in lots; be it further

*Resolved*, That copies of this resolution be forwarded to each member of Florida congressional delegation and that the commander report to this post any response observed on the part of Florida congressional delegation.

FRED S. FENN,
*Commander.*

## Trade Relations Between the United States and Russia

EXTENSION OF REMARKS
OF
### HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject of trade relations between our country and Russia by the Senator from West Virginia [Mr. KILGORE], delivered recently at a dinner of the American Biro-Bidjan Committee, at the Hotel Roosevelt, New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, honored guest, ladies and gentlemen, I welcome the opportunity to be with you at this gathering of the Industrial and Professional Divisions of the American Biro-Bidjan Committee in honor of Mr. M. M. Gousev, chairman of the Amtorg Trading Corp. It has always been my conviction that the development of close trade relations between our country and the country of our great ally, the Soviet Union, will contribute to the welfare and prosperity of both countries. At the same time they will support our joint efforts for consolidating the common victory over the Axis aggressors and establishing the United Nations Organization on a firm basis as the guardian of the peace and security of the world. For this reason I am happy indeed to extend to you, Mr. Gousev, as chairman of the major business organizations of Soviet Russia in this country, my best greetings and congratulations.

I know the American Biro-Bidjan Committee greatly appreciates your valuable assistance to their efforts in behalf of the Jewish refugee war orphans who have suffered so much from the bestiality of the Nazi enemy, and I join with the committee in expressing to you this appreciation.

I would like at this time to pay my compliments to the American Biro-Bidjan Committee for its splendid work in behalf of the orphans of Stalingrad and the Jewish refugee war orphans. This is a great humanitarian task which deserves the support of every man of good will of every faith and creed. I am glad to know that this work is being carried out under the inspiration and sponsorship of the great humanitarian and scientist who has recently become a citizen of this country, Professor Albert Einstein.

We are meeting here tonight at one of the most important periods in the history of mankind. The peace-loving nations of the world have just won a glorious victory over the power-hungry aggressors of the Berlin-Tokyo Axis. Through the unity we have maintained among the powers of the great United Nations coalition, we were able to triumph over one of the most dangerous aggregates of ruthless military might known to man. This victory was not easily won. We paid a staggering price in World War II—a toll in physical, moral, and human terms. We in the United States gave many of the best young lives of our Nation. We suffered the greatest casualties of any war in our history. Fortunately our land itself escaped the immediate ravages of war. Our soil remained inviolate, and our facilities for production remained intact. More than that, the genius of our Nation enabled us greatly to extend these facilities so that we did become the arsenal of all peace-loving peoples of the United Nations.

On this occasion, I think, it behooves us to remember that no nation has sacrificed so much in order to achieve the common victory as did our ally the Soviet Union. Recent press reports tell that more than 6,000,000 buildings were destroyed in the Soviet Union during this war, and 25,000,000 persons were made homeless. The total number of war casualties, soldiers and civilians, reached a total of 40,000,000. Let me note that the number of orphans in the Soviet Union greatly exceeds 1,000,000 and probably reaches 2,000,000. That is why it is really our obligation here to take care of those Jewish refugees and evacuee war orphans who escaped into Soviet Russia during the period of German invasion and occupation from neighboring countries of Hungary, Rumania, Poland, and others.

But to come back to the scorched earth of the Union of Soviet Socialist Republics let me mention that according to an estimate of the Department of Commerce (as given in a recent address of Ernest C. Ropes, chief of the Russian Unit), "It will take 5 years to bring the Soviet Union back to where it was in 1940. After 4 years of almost continuous fighting, there are no stocks of anything left in the country." It is important to remember these grave facts when we consider our business and trade relations. There is little doubt in my mind that the efforts being made by the Soviet Union to rehabilitate and rebuild their homeland which was so ruthlessly destroyed by the Nazis and very frequently by the Russians themselves in their scorched earth sacrifice in order to stop the Nazi onslaught—that these efforts must find sympathetic understanding and support from this country. The sacrifices made by the Soviet Union were made on the altar of our common victory. Therefore, we must lend them every possible financial assistance to accelerate their reconstruction not only as a matter of justice and sympathy, but also in order to help develop our commercial relations for the benefit of both our peoples.

Let us remember that while the German-Japanese aggressors lie crushed and beaten to the earth, morally and in their own minds they are not yet completely beaten. We have been dealing with a cunning and relentless foe. We had to marshal all our human and material forces to crush the enemy on the fields of battle. We have an equal obligation to unite all the moral and material resources of the United Nations and especially of the great powers in order to safeguard our victory. Here let me utter a word of warning. In the course of my investigation as the head of a Senate subcommittee, I saw the vast range of Nazi penetration and infiltration in Europe. The Nazi conspiracy extended far beyond the confines of Germany—into puppet countries and neutral nations, even into obscure and distant corners of the earth. Nazi infiltration was so deep and clever that it requires unflinching will and effective organization to destroy their potential for aggression, both within Germany and throughout the world.

At Potsdam the three great Allies—Russia, Great Britain, and the United States—agreed upon a policy of military and economic disarmament which would destroy the Nazi network. But, I regret to state, some of our key representatives on the Allied Control Council have been very reluctant to carry out this policy. They appear to be unduly concerned about the German standard of living—incidentally the highest on the continent—and not at all concerned about the living standards and the economic development of Germany's victims, which can never go forward as long as they remain dependent on German industry. At Potsdam the Allies set the maximum beyond which the German standard used as a basis for industrial disarmament was not to rise. Some of our officials in Berlin, however, have preverted this to mean the guaranty of a minimum standard for Germany. They set this minimum at a high level, then use it to justify the revival of Germany's nazified heavy industry and foreign trade. These United States officials—and I may say parenthetically that their attitude is reported to parallel that of British representatives on the Allied Council—are in many cases connected with industrial and financial concerns who had close prewar ties with the Nazis. These men would doubtless like to resume commercial relationships with Germany, to rebuild a strong Germany as a counterbalance to Soviet Russia, to risk American lives for their own short-term profits.

I want to repeat that war-minded elements in Germany have not been liquidated by defeat. The Nazis and the groups they indoctrinated are planning and plotting for another attempt against the peace. They are still doing their utmost to sow mistrust and dissension among the victorious powers and especially between the Soviet Union and the United States. They are biding their time waiting and working for a rift among the Allies into which they can drive the wedge of aggression. Long before their final military collapse they planned this vicious strategy. A great soldier of our Ally, Marshal Rokossovsky, warned us that the Fascists are preparing for a third world war, and he appealed to the decent peoples of all countries to be on their guard. To ignore this warning would be suicidal.

Of course, the next attempt may not be called nazism, or the group who spearhead it Nazis. There may be variations in technique, in slogans, in the trapping and the symbols. But the basic philosophy, the basic objective—the exploitation of great masses of humans to appease the greed and power lust of the few, will remain the same. That is why we cannot merely remove a few top Nazis and outstanding war criminals and rest secure in the conviction that fascism has been banished from the world. No; the evil has roots which are deep and widespread. The seeds have been sown even in our own country. And what would it profit us to cut the words "fascism" or "nazism" from the human vocabulary if tyranny by some other name remains? If we are really to destroy this blight throughout the world and prevent its rebirth 10, 20, or 50 years hence, we must look to the soil which nourishes it.

For fascism, my friends, is not the exclusive creation of a Mussolini or a Hitler or

a Tojo. It is but the twentieth century adaptation of a primitive idea which goes back to the dawn of history. It is modern mass production techniques put in the service of ancient avarice, prejudice, and lust for world domination. Fascism—or its forerunners called by any other name—flourishes in scarcity, when the predatory few try to secure an abundance for themselves by despoiling the many. And they employ prejudice to divide and weaken those who would oppose them; they find allies in hate.

This was the mold in which early tribal society was cast. This was the way of the medieval robber baron who lived by plundering his neighbors. This, I may say, is the method of imperialism, which unfortunately has its noisy advocates right here in the United States today. The imperialists are trying to arouse mistrust, suspicion, hatred of other nations, in order to build support for a policy of encroachment upon those other nations. Though it might plunge a world in war, this is the method they choose for quick riches—robbing what is not theirs, keeping other peoples in subjection, keeping their own countrymen at a low level of culture and comfort. Call it imperialism, fascism, neo-fascism, or whatever—it appeals to the lowest of man's instincts. It is the antithesis of civilization. And ultimately it is self-defeating.

How can we combat this courage, this terrible block to human progress? By punishing the guilty? Yes; certainly. But more than that, by discouraging this irresponsible talk against other peace- and freedom-loving nations, by turning thoughts and energies away from aggression against others and directing them freely into productive enterprises unimpeded by the artificial restraints of cartels and monopolies. That is the answer; full development of resources spreading the benefits of industrialization to all people, expanded trade and commerce and free interchange of information among nations advancing in mutual prosperity and peace.

We must not permit the difficult problems of postwar rehabilitation and reconstruction to be used for dividing us from our great ally, the Soviet Union. There is no doubt that during the transition period, when numerous and troubled problems of the world will have to be settled and adjusted there will inevitably arise many serious differences between us and our allies. But we must not allow these differences to place in jeopardy that unity of the Anglo-American-Soviet coalition without which victory would have been impossible. That wartime unity among the Big Three—the United States, the Soviet Union, and Great Britain—can and must be preserved.

We have entered a new age—the age of atomic energy. Limitless prospects have opened up to the peoples of the world. By seizing these opportunities and placing atomic energy in the service of mankind for peace, not war, for reconstruction, not destruction, the leaders of the great nations will bar the way to a race of armaments, a race which will end in a terrible human holocaust and perhaps in the destruction of our entire civilization.

Fortunately for the world as a whole all the great powers are ardently devoted to safeguarding the peace. Certainly our Government and people wish nothing more than security and peace for ourselves and the world as a whole. Nor can any reasonable man doubt that the deepest aspiration of the Soviet Union is lasting peace. For only peace can allow them to devote the necessary energies and resources to the unprecedented task of reconstruction which confronts them. Only security and peace will make it possible for the Soviet people to heal the deep wounds they suffered in this war and to assure them a higher standard of living. We in the United States can aid them greatly in the fulfillment of these purposes. It is in our national interest, in the interest of a durable peace, that we extend to them such aid. It is my conviction that the people of the United States are determined to face the complex problems of reconstruction and rehabilitation, of safeguarding world peace not negatively, but in a positive atmosphere of mutual trust, confidence, and helpfulness. We are not unmindful of the danger signals ahead. But as General Eisenhower so aptly stated there is nothing that divides us basically from our ally, Soviet Union. There is no place where our national interests are really in conflict. These are sound and positive grounds for optimism, unity, and cooperation.

May I revert, at this point, to the laudable efforts of the American Biro-Bidjan Committee in behalf of the orphaned children of the heroes of Stalingrad and the 30,00 Jewish refugee war orphans whom you are arranging to settle in Biro-Bidjan, the Jewish autonomous region of the Union of Soviet Socialist Republics. This is a truly noble achievement. I congratulate you on what you have already accomplished and I wish you well in your future efforts.

As one who has unreservedly fought anti-Semitism and condemned all concepts of racism and racial superiority in the United States and throughout the world, I applaud the help you are giving the Jewish refugee children to start life anew in the Jewish autonomous region. The achievements of Biro-Bidjan is self-government in the development of Jewish cultural life, of the Jewish language, schools, theaters, of Jewish agricultural communities and industries are a credit to the Jewish people. They will help these children grow up as self-sustaining productive citizens in a community where they enjoy full equality with all the other nationalities of the Soviet Union. Here certainly is one answer to some of the immediate and great problems of postwar reconstruction and rehabilitation of the European Jews, problems which are so agonizingly acute today. It seems to me that the efforts in Biro-Bidjan are complementary to those made by the Jews in Palestine. And both of these efforts equally deserve the help of all decent men and women of all faiths.

There is another far-reaching implication in the work you are doing in behalf of the Jewish autonomous region of Biro-Bidjan. The Japanese war lords have at last been forced to yield up their swollen ill-gotten empire. The role of Asia, where fully one-half of humanity lives, now appears in a new light. I am thinking at this moment specifically of Soviet Siberia. How many of us realize that our two countries, the United States of America and the Union of Soviet Socialist Republics are near neighbors, that up where the narrow Bering Straits separate North America from the Siberian land-mass, our two nations are only a few miles apart. Let us resolve to be good neighbors. Distinguished Americans have commented eloquently on the pioneering civilization they found in Soviet Siberia. They have compared it favorably to our own Far West in the stirring period of the nineteenth century expansion, the period of the winning of the West.

They have observed its rich natural resources, the vigor and pioneering energy of its inhabitants, its infinite possibilities for industrial and agricultural expansion, for heightened commerce and trade, for improved communications, and for multiplying contacts with our own country by sea, by land, and in the air. The late Wendell L. Willkie was enthusiastic about the boundless prospects he envisaged there. After visiting the Siberian town of Yakutsk, he wrote: "The town itself seemed, in many ways, like a western town in this country a generation ago. In fact, much of this life reminded me of our own early and expanding days—especially the hearty, simple tastes, the not too subtle attitudes of mind and the tremendous vitality." More recently, Secretary of Commerce Wallace struck the same note after his visit to the Far East. What has this to do with Biro-Bidjan? And with the work of the American Biro-Bidjan Committee? Simply this: That Jewish autonomous region is only 18 hours from Vladivostok, the leading Soviet port on the Pacific. It abounds in rich agricultural, mineral, forest, and soil resources. And it is right in the heart of a vast region that stands on the threshold of a brilliant future.

I ask you, therefore, to think for a moment of the glowing possibilities of Soviet-American business, trade, cultural, and human contrasts in that far eastern region. The Pacific Ocean can become a busy highway, a gigantic bridge of understanding, friendship, and mutual prosperity for our two countries. The potentialities are vast.

Let us do our utmost to strengthen the bonds of friendship between the U. S. A. and the U. S. S. R. I believe that the peace and future security of the world hinge on that relationship. Let us go forward resolutely and unafraid, undaunted by present obstacles or difficulties and tackle this problem in the spirit of American democracy as willed to us by our immortal leader, Franklin Delano Roosevelt. Let us go forward to make one world the keystone of the future for all of us.

## Homes for Veterans

EXTENSION OF REMARKS

OF

### HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. MITCHELL. Mr. President, in view of the effort to reach an early conclusion of this session, I request permission to have printed in the Appendix of the RECORD a statement in connection with a bill to expedite making homes available for veterans at lower costs and in greater volume and speed by facilitating private industrial production of homes through the use of surplus plants and facilities and new types of materials.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Recently the Congress adopted Senate Joint Resolution 122 amending title V of the Lanham Act and authorizing an additional appropriation of $160,000,000 to facilitate the conversion of existing structures for an estimated 100,000 temporary dwelling units for veterans.

The Congress is to be commended for the promptness of its action in this emergency. Let no one suppose, however, that the creation of 100,000 temporary dwelling units will do more than scratch the surface of present housing needs, which, as the days go by, take on the proportions of a national catastrophe.

Senator MEAD, who sponsored this emergency appropriation, after taking into account the doubling up of veterans' families and projected construction of new units for 1946, stated:

"That still leaves 1,100,000 veterans' families to find accommodations in the presently occupied housing supply.

"Not a very encouraging outlook but a challenge which we can't ignore."

Today I am introducing jointly with Senator KILGORE a bill which proposes to meet this challenge by mobilizing the tremendous productive capacity, ingenuity, and resourcefulness of American industry and labor to achieve further increases in house production without interrupting, or interfering with plans now being established for emergency housing. This bill, in other words, is not intended as a substitute for other plans or pending legislation. It will not divert or absorb materials, labor, or facilities required by these plans. Instead, it places primary emphasis on the utilization of surplus plants and facilities and on the use or adaptation of materials not customarily employed to any marked extent in house construction, such as aluminum, magnesium, alloys, plastics, wood products, and the like. It proposes to apply to these resources the mass production techniques and skills acquired in wartime industrial output.

Veterans who have good reason to know by actual use the amazing contributions of American industry and labor to the arsenals of war are asking why the same capacities and resources are not being turned to meet present housing needs. An excellent feature article, The Great Housing Shortage, appearing in the December 17 issue of Life magazine, sums up the attitude expressed by veterans in this manner:

"If this country can build an $80,000,000,000 war industry, make the atom bomb, and win the war, why can't it build enough houses?"

The same article goes on to say that enough houses can be built—but only by revolutionizing the archaic housing industry. If we had fought this war on the same level of efficiency which characterizes the building industry today, we would have used blunderbusses instead of atomic bombs.

The bill proposes four main ways in which the National Housing Agency can promote or stimulate an additional volume of privately produced housing for veterans at a cost within their reach:

1. By undertaking research in new housing techniques and extending technical assistance to manufacturers.

2. By acting as a centralized purchasing agent for local organizations which in turn will sell or rent this new housing to veterans. This service will enable large orders to be placed at one time, so that manufacturers can proceed with a production schedule.

3. By making loans to local organizations to assist them in financing purchases of houses for resale or rent to veterans.

4. By establishing a procedure whereby the Surplus Property Administration will give preference in disposal of plants and facilities to manufacturers who will produce housing for veterans or materials for such housing.

It should be clearly understood that the loan provisions of this bill do not require any ultimate costs to the Government for other than administrative and servicing expenses.

In stimulating new production methods, the Government will be creating new opportunities for business, including the many small enterprises that will spring up to take part in the production of the numerous components and materials going into the finished product. The Government will also be creating new opportunities for labor to secure steady year-round jobs instead of the seasonal and haphazard employment which has always been the curse of the building industry.

The housing crisis is so acute as to call for the same imagination and boldness of action that was shown by the Government and American industry and labor during the war. This bill strives to provide the means whereby such action can be taken. In my opinion the objectives which it proposes can no longer be deferred.

## Why We Should Have a Department of Peace

EXTENSION OF REMARKS

OF

## HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I submit for printing in the CONGRESSIONAL RECORD an address I delivered today over the National Broadcasting Co.'s national network as follows:

I am much obliged to the National Broadcasting Co. for this opportunity to present to its vast radio audience a bill I have introduced in the Congress to create a Department of Peace and Good Will, to state the reasons that prompted its introduction, and the arguments in support of it. I will read the text of the bill, as follows:

*"Be it enacted, etc.,* That there is hereby established a new department of the Government of the United States to be known as the Department of Peace and Good Will, which shall have for its purpose the activating of the forces of good will and mutual understanding throughout the world and the fostering of amity among nations.

"SEC. 2. The head of the new department shall be Secretary of Peace and Good Will and he shall have the same salary and official status as other members of the President's Cabinet."

I have introduced this bill as a means of implementing the challenging speech of Gen. Douglas MacArthur when, on accepting the surrender of Japan, he spoke of the futility of war and said:

"We have had our last chance. It we do not now devise some greater and more equitable system, Armageddon will be at our door. The problem basically is theological and involves a spiritual recrudescence and improvement of human character that will synchronize with our almost matchless advance in science, art, literature, and all material and cultural developments of the last 2,000 years. It must be of the spirit if we are to save the flesh."

### A CAMEO OF LITERATURE

In my opinion the speech of General MacArthur was one of the very highest of the high lights of literature. I place it longside Lincoln's Gettysburg address. When we consider its profound meaning and far-reaching implications in charting the course to permanent peace and mutual understanding among nations its meaning grows until it seems to me to be divinely inspired. I have introduced this bill in the hope of assisting the people of America to become oriented in thought and action to the sound thinking of the great commander, which in my humble judgment points the way to the salvation of the world.

We led the forces that won the victory in the recent cosmic conflict and in doing so we gave our solemn pledge that when the terrible travail of war was over we would lead in laying the foundation of everlasting peace. We performed our military obligations nobly but we are falling down lamentably in the performance of our peace obligations. Our great military and naval leaders and our great scientific inventors, in their appearances before the Appropriations Committee of which I am a member, have not even given a passing reference to peace. Their insistent plea is for more and more funds to perfect the instruments that kill and destroy. We seem unable to make the shift from war to peace. We have done nothing to encourage a great moral and spiritual resurgence which alone can bring about the salvation of the human race.

### PICTURE IS SHOCKING

More than 4 months have elapsed since VJ-day and the world picture is shocking. We have our fighting men participating in the civil war in China, and for all I know they may be killing Chinese Communists at this moment. What business have we interfering in the internal affairs of another country? Is it our duty to police the world and to render armed assistance to internal factions? If so, we have cut out a big job for ourselves. Our men ought to be brought back to their homes and families. Our foreign policy is terrifically weak and impotent. We are exerting no resolute leadership for peace and order. Our two principal allies, Britain and Russia, are carrying on unilateral activities that grate on our sense of justice and conflict with the spirit and purpose of the San Francisco Charter. The world is fast sinking into the groove of power politics where wars are spawned, and I very much fear that by our inaction and fumbling we may be contributing to the making of another war. We hear it said that the race for armaments is on and that another world war is looming on the horizon. There are indications that every nation on earth that has any means of doing so is feverishly attempting to develop its own atomic bomb, so that it may get the drop on all other nations and wipe them out of existence. The world appears to be moving toward another atomic war and the atomic fever has risen several degrees since November 20 when the announcement was made that the United States is still manufacturing atom bombs. If the United States, the leader among nations, sees fit to continue the manufacture of atom bombs it gives an extra excuse to all nations to manufacture them and stack them up pending developments. And what kind of a "one world" will we be living in if every nation has its stack of atom bombs ready to use on other nations whenever a hair-trigger situation develops? The first thing to be done with the atomic bomb is not to manufacture more of them but to outlaw the use of the bomb in war by as tight an international agreement as can be made.

### LIGHTS ARE FADING

The prospect for world peace is growing dimmer as the world loses sight of the lights on the highlands and slips back into the welter of militarism. My plea, and it is a very earnest plea, is simply this: Before we permit the psychology of the world to become hopelessly fixed as a war psychology, let us try General MacArthur's plan. That is the reason why I have introduced this bill for the creation of a Department of Peace and Good Will. I believe that such a department, staffed by the right sort of personnel, can be of incalculable service in carrying out General MacArthur's grand idea. The most confirmed skeptic must admit that we will be no worse off if we try MacArthur's plan, and conceivably it may open the way to the world's salvation.

### MALFORMATION OF GOVERNMENT

With the war over and with a world of peace the central theme and hope of all mortals, and with the United States irrevocably committed to give its aid in the establishment of a peaceful world, it is evident on the very face of things that the maintenance of a full-blown Department of War and no Department of Peace is a malformation of government. We need to correct that malformation to keep peace with modern conditions.

Having led in the military leadership that brought about a successful conclusion of the war, we cannot now, if we are true to our faith and loyal to our promises, refuse to accept the moral leadership of the world

that must be relied on to convert the fruits of military victory into permanent and lasting peace. The world is looking to us for such leadership. We cannot escape our responsibility.

WAY TO DRAMATIZE PEACE

One way to help in winning the peace is to dramatize our purpose by the establishment of a department of peace and good will. Why not? With our Nation professedly committed to the creation by earnest efforts of a new world of peaceful relations between man and man all around the earth, we have no governmental agency to implement that endeavor—not one. Let us examine the scroll of governmental establishments and see what we have:

First. A War Department—function to destroy and kill.

Second. A Navy Department—function to destroy and kill.

Third. An Office of Scientific Research and Development—function to invent the instrument that destroy and kill.

And so on.

I would not eliminate or depreciate any one of these. In the present posture of world affairs we must have, and must continue to have until peace is secure, an adequate Army and Navy. But after we have committed our leadership, as we have in a thousand solemn ways toward bringing about a new and better world, patterned even though imperfectly on the plan of the fatherhood of God and the brotherhood of man, is it unreasonable to expect that we shall inaugurate this new era of peaceful endeavors and make our Government responsive to our professions by adding to the roster of our governmental activities a new department of peace and good will to protect and conserve the great human values?

WE NEED A FIGHTING DEPARTMENT

Some may ask, "What about the State Department? Why cannot it act as a department of peace and good will?" The answer is that the State Department will never serve the purpose. It operates along the lines of laissez faire, and no laissez-faire attitude is ever going to win the fight for world peace. If we want world peace, as I am sure all Americans do, we must be willing to fight for it. We need a fighting department that can bring more activity to the solution of the problem than the State Department can under its traditions and authority. We need a department that can and will reach out around the earth and propagandize for peace; a department with expert personnel and facilities to conduct research along all lines that will promote peace; a department that can and will get in touch with the moral and spiritual forces of the world; a department that can and will contact and activate and unify the forces in all lands, which alone by common purpose and united action can make the permanent peace of the world a blessed reality. It is a tremendous fight we are up against, but we must win it—or else Armageddon.

AT THE CROSS ROADS

We have reached the cross roads. The road to the right leads to peace; the road to the left leads to war. We face the tremendous responsibility of deciding which road we shall take.

What we need now is not military leaders but peace leaders. Building a vast peacetime Military Establishment is not in keeping with our motives for world cooperation. The military leaders have done their part magnificently. History will sing their praises until the last book is written, but it is now time for peace leaders to take over and carry on.

Let us call peace leaders into action under the aegis of the new department and then let us see whether these peace leaders can do their part as well as our military leaders have done theirs. If they can, the future of the world will be assured.

The problems of the future can best be solved by persons of a peace psychology instead of by persons of a war psychology. We need to cease talking in terms of implements of war that will most effectively kill and maim the most people and to begin talking in terms of hospitals and schools and churches, the things that elevate the spirit and lift humanity to a higher plane.

Those things and not wars will make for a better world.

THE GOOD NEIGHBOR

The passage of this bill by the United States Congress would be notice to the world that when we said we wanted to be a good neighbor in the family of nations we meant it. Other nations are reported to be much confused by our militaristic preparations and are finding it difficult to reconcile our plans for forced military training and regimentation with our protestations for peace. To those doubting Thomases in the family of nations the passage of this bill and the creation of this department of peace and good will would mean that we are going all out for peace and that we are not for peace with our tongues in our cheeks. I say again that in the recent war we voluntarily assumed leadership among nations in emancipating enslaved people from tyranny and oppression. Are we now going to fail humanity by refusing to accept the moral leadership that is necessary to translate the fruits of victory into a peaceful world of the future?

I hope that every person in America who wishes to do his part in ushering in a peaceful world will write to the Foreign Affairs Committee, House of Representatives, Washington, D. C., and request a favorable report on this bill, H. R. 4648, and at the same time send letters expressing interest in the bill to the Representative in Congress from his district and the United States Senators from his State.

SADDEST OF ALL SPECTACLES

Before long the hearts of our people will be wrung by the saddest of all spectacles in the aftermath of war—the mournful procession that will bring our beloved dead from their temporary graves in foreign countries to their final resting places in American soil. More than 274,000 of the finest in our land gave the last full measure of devotion fighting for our flag in foreign theaters of war, and the bodies of these men will be brought back and committed to the home soil of the communities from which they sprang—earth to earth, ashes to ashes, dust to dust. Funeral corteges will soon wend their sorrowing way to almost every locality in the United States, and all of the pent-up grief of fathers, mothers, wives, and sweethearts will break forth in a new deluge. The millions of our people who will be touched by the poignant grief of this panorama are going to say to the statesmen of our time, "We serve notice on you now that this must not happen again. We expect you to build firm foundations of enduring world peace and we will hold you responsible if you do not."

When we give our consideration to this bill to create a department of peace and good will let us not forget our obligation to keep faith with the heroic dead.

## Disposal of Government Aluminum Plants

EXTENSION OF REMARKS

OF

### HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. MITCHELL. Mr. President, I request permission to have printed in the viewing the situation surrounding the disposal of the Government aluminum plants.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In view of the fact that the Senate has approved the very important stock-piling of metals which may be of great strategic need to our future economy, I want to call attention to the speed with which we are demobilizing the facilities for the production of that most important metal of this war and of the future—aluminum.

I want to call attention once again to the facts that men and women in the aluminum industry are out of jobs when they could have been working; that plants are lying idle when they could have been running; that public power is going to waste when it could have been harnessed to these plants.

This unfortunate state of affairs is traceable in large part to the plant-disposal activity or inactivity of the Reconstruction Finance Corporation.

By law and court decision and policy directives of the Surplus Property Administrator, the RFC is obligated to dispose of its aluminum plants to private producers other than the Aluminum Co. of America. Potential operators have made bids for lease of these plants contingent upon Government purchases of excess aluminum for a national security stock pile, in order to get a foothold in an industry dominated for half a century by the Alcoa monopoly and its high price, low production policy. But the RFC, by its narrow insistence upon terms that would absolve the Government from all responsibility for helping competitive enterprise get a start, has limited these offers to a point where the efficient, low-cost plants of the Northwest are thrown out into the cold.

The Reynolds Metals Co., negotiating with the RFC, was asked to present offers which precluded stock-pile purchases by the Government. Reynolds thereupon revised its original offer, and cut the Northwest plants out of its plan of operation. To prevent the RFC from closing the door on future operation of these Northwest plants, Reynolds was able to get a proviso into a lease contract for the Arkansas plants, reserving the right to make offers for additional plants when the Government would determine its stock-piling policy.

It is clear that the only hope of getting these idle aluminum plants into private operation depends upon a Government stock-pile program for aluminum. I have introduced a bill, S. 1612, specifically authorizing aluminum purchases for stock pile. This program would not conflict with any overall stock-pile plan that may be subsequently established.

ALCOA: WHIPPING BOY WITH ALLEGEDLY FALSE WHISKERS

In this connection I wish to enlarge upon previous remarks concerning the problems of aluminum plant disposal.

It is high time that a fantastic myth be destroyed. This is the myth, created and carefully nurtured by the Aluminum Co. of America, that it is independent of the Aluminum Co. of Canada. Alcoa has friends inside and outside the Government, who try to peddle the same nonsense. The facts should be publicized because of the influence that Alcoa wields, particularly in the press, with respect to aluminum plant disposal policies.

It is not news to the Members of Congress that the majority stockholders are identical in both the American and Canadian companies, and that the Davis brothers are executive heads of there companies. Nor is it news that war agencies in the United States contracted with the Canadian firm for purchase of large amounts of aluminum, making an advance payment of almost $70,000,000 on Appendix of the RECORD a statement re-

this purchase which permitted the construction of the so-called Shipshaw power project. This arrangement was made at a time when responsible officials in our Government were unwilling to effect the necessary expansion of available Federal power facilities in the Northwest and other parts of the country. Accordingly, today we are faced with a giant competitor in a neighboring country, beyond the reach of our antitrust laws, serving the interests of Alcoa, and able to produce at a low cost made possible by the generosity of some American officials in financing its power development. The effect of this producer upon the development of a competitive and independent aluminum industry in this country needs no elaboration. The details have been set forth many times on the floor of both Houses, and before a number of congressional committees.

When Secretary of the Interior Ickes explained at great length to the Senate Small Business Committee how the Shipshaw development, promoted by Alcoa, jeopardized the postwar economy of the Pacific Northwest, I. W. Wilson, vice president of Alcoa, countered with an indignant denial. In a statement reported in the Portland Oregonian of May 29, 1945, Mr. Wilson charged Mr. Ickes with "glaring misstatements" and "unfair criticism." He claimed that no member of the Alcoa firm knew of the contract until several months after its execution, and that these transactions were in fact detrimental to Alcoa's interest.

It is a great strain on the credulity of the average citizen to suppose that the powerful Alcoa monopoly, the only aluminum producer before the war, had no knowledge of, or played no part in, the Shipshaw deal. But that is their story, and they stick to it. Mr. Wilson, and other Alcoa representatives, have paraded their air of injured innocence before congressional committees and in a variety of bronchures circulated throughout the land.

Thus, when a subcommittee of the Senate Committee Investigating the Defense Program held hearings at Spokane, I, as chairman of the subcommittee, received the following reply by Mr. Leon Hickman of Alcoa to a question concerning Shipshaw: "Sir, we don't know as much about the Shipshaw matter as you do." At another point in the hearings Mr. Arthur P. Hall of Alcoa said: "We had no knowledge until after it was published in the paper by Jesse Jones."

In contrast with this claim, insistently repeated on every possible occasion, I would like to quote two paragraphs from the Attorney General's report on the aluminum industry, submitted to Congress September 14, 1945, pursuant to section 205 of the War Mobilization and Reconversion Act of 1944. It states (S. Doc. No. 94, 79th Cong., 1st sess., p. 38):

"The most recent indication of the continued friendship between Alcoa and the Canadian company is revealed in Alcoa's attitude toward wartime expansion in Canada, especially the Shipshaw power project. If there were any likelihood that the Canadian company would be a bona fide competitor after the war, Alcoa would have feared the Shipshaw development, since it enables the Canadian company to produce aluminum very cheaply. Actually, Alcoa seems to have been favorably disposed toward it and to have aided in consummating the arrangements between this country and the Canadian company.

"During the spring of 1941 the Office of Production Management was exploring with the Canadian company the possibilities of getting a large supply of its aluminum. Arthur V. Davis, Alcoa's chief executive, undertook to negotiate with the Canadian company a metal-purchase agreement on behalf of OPM. If the relation between Alcoa and the Canadian company had been a competitive one, Mr. Davis could hardly have been of service in this negotiation. The role of Alcoa officials is further indicated by an OPM analysis of available power supply which listed I. W. Wilson as the source of information as to how much more Shipshaw power could be obtained for aluminum."

As further evidence that Alcoa knew about, or participated in, the Shipshaw arrangements, I want to read an excerpt from a memorandum in the OPM files, dated April 15, 1941. So far as I know, this memorandum has not been made public. On the subject of additional aluminum supply, Mr. C. W. Kellogg wrote to Mr. G. M. Moffett in part as follows:

"The purpose of this memorandum is to record results of conference yesterday on the above subject.

"Mr. Knudsen decided in conference with him that the additional annual supply during the maximum year now to be arranged for is 200,000,000 pounds of aluminum per annum.

"The sources from which this aluminum is expected to be obtained are as follows:

"1. From the Canadian Aluminum Co., 44,000,000 pounds between now and next April and 110,000,000 pounds annually thereafter. This is subject to two contingencies; first, the construction of the Shipshaw development on the Saguenay River whereby 375,000 kilowatts can be developed in about 18 months, and, second, upon the negotiation of a more satisfactory contract for the aluminum metal. The best offer so far has been a 3-year firm contract. The negotiation of this item is to be undertaken by Mr. A. V. Davis."

Copies of this memorandum, from which I have quoted, are listed as being sent to Mr. Knudsen, Mr. Batt, Mr. Fuller, Mr. A. I. Henderson, Mr. Holden, and Mr. I. W. Wilson, vice president, Alcoa.

Mr. Batt, who was responsible for a large part of the war-aluminum program, seemed to have shared the professed ignorance of Mr. I. W. Wilson, notwithstanding the fact that both of them received copies of the April 15, 1941, memorandum mentioning the Shipshaw development. Mr. Batt testified before Senate Small Business Committee in the spring of 1945: "I was never conscious that I had ever heard about Shipshaw until some time in '43." His answer to another query was partly as follows: "You indicated yesterday that you know more of the details of Shipshaw than I do." These two comments are curiously similar to the ones I quoted as coming from Mr. Hall, of Alcoa, in the later Spokane hearings.

Alcoa keeps pointing to the court decision in the antitrust case that the stockholding relationship between the American and Canadian companies was not a violation of the antitrust laws. But, as the Attorney General's report says (p. 38): "The prospective independent is interested in a much narrower fact: Are these two companies going to operate independent of each other, or as friends of each other, in competing against him?" To suppose that the same group of majority stockholders in both companies will arrange matters to secure a lesser rather than a greater net return to themselves is again a strain on the credulity of the average citizen. The Surplus Property Board in its report to Congress on aluminum plant disposal described a plan acceptable to Alcoa whereby it was assumed, among other things, "that imports from Canada and elsewhere would take place in volume that would bring Alcoa's domestic production below the percentage fixed by the court as constituting monopoly" (p. 48). In other words, Alcoa would use the Canadian company as a faucet, turning on some imports when it produced more than 75 percent of the domestic aluminum supply, shutting off such imports when its production was below this percentage. In rejecting the plan acceptable to Alcoa, the Surplus Property Board stated (p. 49):

"This plan assumes that most of the competition with Alcoa in this country would be furnished by Canadian imports. The Surplus Property Board cannot regard this assumption as a satisfactory solution of the competitive situation for two reasons: (1) Canadian aluminum and Alcoa aluminum are subject to the same stockholder control; and (2) this arrangement would deprive American workers of opportunities for employment in the aluminum industry."

In a letter of protest to the Surplus Property Administrator, dated October 15, 1945, Alcoa labeled the proposed program for disposal as "a cradle-to-the-grave program which, once started, can never be terminated." With the customary air of injured innocence, Alcoa shed great, big crocodile tears over the stated preference of the Surplus Property Board for competing independent producers in the acquisition of Government plants. Alcoa wrote at one point:

"We asked no subsidies as a purchaser. We were willing to pay cash for any of these plants that would be sold to us. We expected that the output of any plants so purchased would have to compete for markets in competition with the purchasers or lessees of the remaining plants, with Reynolds Metals Co. and Olin Corp., with Aluminum, Ltd., and other foreign producers, and with the output of our existing facilities."

Note that Alcoa defines competition upon acquisition of Government plants as including the Canadian company, in which the majority stockholders are identical, and as including even its own facilities in this country. Alcoa does not say, of course, that once it got the Government plants it wanted, the chances of getting new producers for the remaining plants are practically nil.

In connection with previous remarks which I made on the floor of the Senate about the aluminum plant disposal program, an editorial in the Portland Oregonian of November 26, 1945, accuses me of using Alcoa as a "whipping boy" to make political capital. The editorial states in part: "Now that the false whiskers have been removed there seems to be nothing but votes to be gained by continued belaboring of Alcoa." I think the reading public should be informed that this editorial appraisal of the proposed disposal program is lifted, without identification and hardly with any change of words, from Alcoa's letter to the Surplus Property Administrator. The whiskers sprouted by this precocious "whipping boy" are not false whiskers; they are very genuine.

To implement the aluminum disposal program of the Surplus Property Board and provide a practical means of getting governmental plants into the hands of private competitive producers, S. 1612 would authorize the RFC to purchase aluminum for stock pile from Government-constructed plants. The Senator from Arkansas [Mr. FULBRIGHT] and the two Senators from Oregon [Mr. MORSE and Mr. CORDON] have joined with me in sponsoring this bill. It is to be expected that Alcoa will strenuously oppose a stockpiling program of this nature. It has outlined its position to the Surplus Property Administrator as follows:

"It is proposed to create an artificial market for the operators of Government-owned smelting plants by stock piling aluminum ingot ostensibly for purposes of national defense.

"We do not criticize the stock piling of aluminum for national defense. But if this were the purpose of the proposal, it would be purchased on the open market at a competitive price and stock piled only in the amounts deemed desirable for defense. Such a program would be the function of the military authorities and would have no place in the surplus-property-disposal program.

"The proposal to stock pile surplus aluminum as a means of making operation of the Governments plants attractive is unnecessary and defeats its own ends."

Alcoa means, of course, that the stock pile proposal is unnecessary to Alcoa, and would defeat Alcoa's ends. That Alcoa's needs and ends are not necessarily those toward which the whole country is striving is evidenced in the Surplus Property Act and the court decision, both of which carry a mandate to break the monopoly grip on the aluminum industry.

If an aluminum stock pile is essential to national security, and the Army-Navy has so declared, good sense dictates that the stock-pile program be tied in with the aluminum plant disposal program, to accomplish two mutually desirable objectives of the Government. That is what the stock-pile bill proposes to do. Alcoa would have us believe that the virtue consists in keeping these program apart, so that one of those objectives, written into the law of the land by the Surplus Property Act, should be defeated.

The copious crocodile tears that Alcoa is shedding over Government subsidies must not be permitted to wash out the Surplus Property Act and to confuse the issues that present themselves. If a stock-pile program along the lines suggested by my bill had already been in effect, it is likely that the aluminum plants would now be in private operation instead of lying idle with attendant costs in maintenance, unemployment, and public power waste. The offers to lease made by independent producers, as I have said, were contingent upon such a Government purchase program. For that very reason the Reynolds Metals Co. excluded the northwest plants in its recent agreement with the RFC to take over the Arkansas plants. Unless the stock-pile bill is passed, continued idleness and unemployment are the prospects that lie ahead for the remaining Government-owned aluminum plants.

## A Continuing Scandal

EXTENSION OF REMARKS

OF

### HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. CHAVEZ. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "A Continuing Scandal," from the Commonweal, the issue of December 21, 1945. It deals with the subject matter which the Senator from Minnesota [Mr. BALL] discussed in the Senate today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CONTINUING SCANDAL

In the Commonweal for November 2, 1945, we published an article by Elizabeth Ann Cooper on the subject of the Mexican workers brought to this country as maintenance-of-way employees on the railroads. The conditions reported in this article are at the present moment generally worsening all over the country, and unless the whole program is thoroughly investigated by Congress and effective steps are taken to effect radical improvements, we shall be faced with an even worse scandal than that described by Miss Cooper. The present situation is that most of these workers' contracts expire by the middle of this month; many thousands of contracts have already expired. Under the contracts the workers' return journey to Mexico is of course guaranteed. But the workers are now discovering that for one reason or another when their contracts expire they cannot get transportation home.

The result is that some 80,000 Mexicans scattered all over the country are becoming desperate. Scores of them have quit the railroad camps and gone to Washington under their own steam in order to present their grievances to Mexican and American authorities. They arrive in the Nation's capital with substantially no resources beside their ancient and battered suitcases and the clothes on their backs. Since the railway companies are not certain exactly how long the present situation will last, they are making no great effort to improve conditions in the work camps, or even to put in adequate supplies of fuel or food. One cannot help suspecting, moreover, that our railroads are perfectly willing to take advantage of the situation in view of the continuing scarcity of common labor all over the country.

It is difficult to assess the blame for this scandalous state of affairs. We are told that the Mexican railroads have not adequate facilities to handle any large number of returning workers on the other side of the border; we are also told that our own railroads are equally incapable of carrying the men to the border, the allegations coming from north and south of the border, respectively. Of course, we all realize from daily experience that the American railways continue greatly overtaxed, and reports from Mexico indicate that the Mexican lines are in shockingly bad condition, yet the fact remains that solemn contractual obligations toward the citizens of a friendly neighbor are being largely neglected, and that at the present rate of return it will be a year at least before all these unfortunate men can rejoin their families. In the meantime, since their contracts have expired and cannot legally be renewed, they can only continue to work for the railroads without any contractual protection or else risk everything by quitting camp and seeking redress from the authorities—a desperately difficult task in view of linguistic barriers and the meagerness of their resources. Prompt action in Washington is the only thing which can save us from national disgrace.

## Our Foreign Service

REMARKS

OF

### HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am asking unanimous consent that I may insert as part of my remarks a Christmas and New Year's message that the President of the United States and the Secretary of State are sending all over the world to our foreign service officers. I believe, Mr. Speaker, that the House of Representatives would like to join with me in sending our good wishes and our thanks to the personnel of the foreign service who have carried on during the very difficult war days under tremendous handicaps and often without instruction from those in authority in the United States. They have done a magnificent piece of work by and large.

The messages from the President and the Secretary of State to the foreign service follow:

High tribute to the members of the American foreign service has been paid by President Truman and Secretary Byrnes in Christmas messages made public in the December issue of the American Foreign Service Journal just issued.

President Truman in his message stresses the contributions made by the American foreign service in the winning of the war and expresses himself as fortunate in having the support and counsel of all members of the service—the first line representatives of the American people at outposts throughout the world—in making secure the peace.

Secretary Byrnes lauds the foreign service for its significant contribution to the common victory and expresses appreciation for its generous cooperation and assistance. He voices his every confidence that the foreign service will meet its increased responsibilities and cope with the difficult and complex international problems arising everywhere in the future, as it has in the past, with loyalty, integrity, and singleness of purpose.

The text of the President's message follows:

"*To All Members of the American Foreign Service:*

"I am delighted to express to you my sincere best wishes for the Christmas season and to congratulate you upon your achievements in the year which is drawing to a close. At this Christmas, the first since victory, you may well feel proud of the contributions you have made to the winning of the war against the forces of evil.

"As emissaries of good will, and first line representatives of the American people at your outposts throughout the world, none knows better than you that victory is not enough. The despair which the liberation lifted from so many hearts will return unless we can help men to find food, clothing, and shelter, help them to trust and understand one another, and, through wise policy, create the conditions in which we may exchange our goods for the benefit of all. Thus can the peace be made secure.

"This is a task to which I pledge myself, and I know that I am fortunate in having the support and counsel of all of you in the foreign service of the United States.

"HARRY S. TRUMAN."

The text of the Secretary's message follows:

"*To the American Foreign Service:*

"Christmas this year is one of particular satisfaction and joy for all of us. We may rightfully take pride in a job well done, a victory well won. The foreign service made a significant contribution to the common victory and you may be sure that it has been realized and appreciated.

"We, in the Department, are well aware of the sacrifices made and the hardships endured by the foreign service during the war—without complaint and in good spirit. All of you have worked hard in the most trying circumstances, many of you have had prolonged assignments abroad without relief, some of you have been separated from your families for long periods. We hope that it will be possible very soon to remedy all that and we shall make every effort to do so.

"I should like to be able to say to you that, now that the war is over, the foreign service can relax its efforts and rest awhile on well-earned laurels, but I think that you realize, perhaps better than anyone, the enormity of the task before us. If anything, the foreign service will have to redouble its efforts in the forthcoming year to meet its increased responsibilities and to cope with the difficult and complex international problems arising everywhere. Let us make no mistake about it, the period before us will be arduous and demanding. It will test our judgment, try our patience, and challenge our perseverance. But I have every confidence that the foreign service will rise to the occasion in the future, as it has in the past, with loyalty, integrity, and singleness of purpose.

"In the year to come there will be changes in the foreign service, some of which may be far reaching in consequence. These are necessary if the service is to function as it should. The constructive and helpful attitude of the members of the foreign service toward the reorganization of the Department and the foreign service has been most gratifying because it demonstrates a clear recognition of the need of strengthening and improving our machinery, and a keen interest in seeing it done.

"I extend to each of you my sincerest wishes for a happy and successful new year, and I want to take this opportunity to thank you all for the generous cooperation and assistance you have already shown.

"JAMES F. BYRNES."

## UNRRA Is Desperately Necessary

EXTENSION OF REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mrs. LUCE. Mr. Speaker, in connection with the appropriation for UNRRA which was passed yesterday by this House, I ask consent to insert in the RECORD the following letter written by me to the editor of the Greenwich (Conn.) Review, concerning the reasons for the increased need abroad over and above the deficiencies created by wartime destruction and loss of manpower.

Also, I want to call particular attention to the relief situation in Italy and Poland as shown by included dispatches from C. L. Sulzberger, Milton Bracker, and Michael L. Hoffman. Together they show beyond contradiction that even what we have agreed to do will at best be palliative, and that we must continue such relief measures throughout the year of 1946 unless we desire to see epidemic disease and starvation sweep across all Eurasia on a scale never approached before, not even in the time of the Black Death which destroyed over one-third of the then existing human population.

The letter follows:

DECEMBER 20, 1945.

Mr. DONALD CHAPMAN SPAULDING,
*Editor, the Greenwich Review,*
*Greenwich, Conn.*

DEAR MR. SPAULDING: Mr. Sheldon Abbott's letter in your issue of November 23 brings up several questions which have been asked by other corerspondents, and which should be answered.

It is often overlooked, or forgotten, that UNRRA is not an exclusively American organization but is subject to control by all the United Nations, with quotas fixed by international agreement at 1 percent of the annual national income.

The Senate and House have just appropriated the final installment of our contribution for 1945, and have authorized a further contribution of $1,350,000,000 for 1946. No actual appropriation has been made for this second contribution, and new legislation will be required before the fund can be made available for purchase of medicines, food, clothing, and other supplies needed to prevent epidemics and wholesale starvation in so many devastated areas.

Mr. Abbott is, in my opinion, entirely justified in urging that we take stock of what we have to give before obeying our national instinct for generous giving to the suffering peoples of other lands.

Today we have no longer the unlimited resources to play the lavish spendthrift among nations. The need abroad is urgent beyond any verbal description. It has to be met in a thoroughly responsible manner. No other nation has the supplies and the transportation facilities with which to meet it but ourselves.

Several weeks before Mr. Baruch demanded that a national inventory be taken, I asked for the same thing. It was last May, on my return from the still smoking ruins of France, Italy, and Germany, that I told Members of the Congress and of the press that our first step should be the appointment of a world rehabilitation administrator to find out and inform Congress and the public of the exact state of world deficiencies, what the United States would be expected to make good, and what we could afford.

No such comprehensive survey was ever authorized. Now it is too late to collect statistics when the winter's need is at its bitterest for hundreds of millions of hungry, shivering humans in Europe and Asia.

The present appropriation by Congress fulfills the American quota until February 1946, by which time a further appropriation, as part of the already authorized $1,350,000,000 quota for 1946, can be expected.

In administering these funds there is no doubt that there have been great abuses, and that in some quarters these faults still exist. Partly these have been caused by appeasement of other nations in order to feed and clothe populations in some areas. There is overwhelming evidence to prove that in Poland, Hungary, Austria, Yugoslavia, and some parts of Czechoslovakia and the Ukraine, livestock left by the Nazis has been taken from the inhabitants and herded eastward. Most Soviet Army units now occupying various areas of eastern and southern Europe are living off the land by organized forage, as that is the only source available in the chaotic condition of transportation there.

The amount of food and other supplies taken from an already impoverished population can be judged by looking at the present number of Soviet Army personnel reported to be garrisoning these areas at the end of November 1945:

| | *Soviet Army* |
|---|---|
| Austria | 700,000 |
| Hungary | 1,250,000 |
| Czechoslovakia | 900,000 |
| Yugoslavia | 450,000 |
| Germany | 2,000,000 |
| Poland | 1,500,000 |
| Balkans (chiefly Bulgaria along the Turkish frontier) | 1,550,000 |

The exact extent to which the Soviet Union has met its quota from UNRRA has not been officially announced. To date, practically the whole real contribution has come from the United States and the British Commonwealth.

However, the need is so desperate, that regardless of the abuses of UNRRA, or the inefficiency within the organization itself, which are being corrected, I feel all Americans must support UNRRA and I have always done so. Indeed, the following (enclosed) letter from the Director General of UNRRA shows how wholeheartedly I have done just that.

Sincerely,

CLARE BOOTHE LUCE.

UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION,
*Washington, D. C., December 13, 1945.*

Mrs. CLARE BOOTH LUCE,
*House Office Building, Washington, D. C.*

DEAR MRS. LUCE: I want to thank you for your splendid statement endorsing the new UNRRA appropriations now before Congress.

Mrs. Jacob has undoubtedly informed you that 850 women commentators will carry your statement on their broadcasts today along with a statement from Mrs. Lafell Dickinson, National president of General Federation of Women's Clubs.

I am sure that your support both in Congress and on the air has directly contributed to the needs of suffering people in Europe and Asia.

Sincerely yours,

HERBERT H. LEHMAN,
*Director General.*

SURVEY SHOWS UNRRA VITAL TO EUROPE'S FEEBLE MILLIONS

(By C. L. Sulzberger)

LONDON, December 15.—Despite the agency's admitted ineptitude in some phases of its inaugural work, the continuation of the United Nations Relief and Rehabilitation Administration is regarded as indispensable in large sections of suffering Europe, which face disease and starvation if Allied assistance is withdrawn.

On the basis of reports from correspondents of the New York Times in various countries receiving UNRRA aid, the following salient facts can be established:

In ill-fed, ill-clothed, and ill-housed Greece, UNRRA's contribution is believed to be imperative to recovery.

In Yugoslavia, whose entire economy was ravaged by the crisscross marching and countermarching of regular and irregular armies, 3,000,000 persons face starvation if UNRRA food shipments are not continued, and even then the food problem will be far from solved.

In Italy, which is slated to receive $450,000,000 in assistance next year if scheduled appropriations are implemented, UNRRA is considered the key factor in the national economy for the coming year.

In miserable Poland, still festering with disease, chaos, and the fevered meanderings of a bewildered population, the agency is virtually the only source of outside aid.

In Germany UNRRA is caring for almost all the 850,000 displaced persons still swarming in camps and depots, and has been largely responsible for the repatriation of more than 4,000,000 unfortunates.

It is obvious that UNRRA is fully aware of the torrent of criticism directed against it during the last few months. Efforts have been and are being made to rectify some of the causes of this.

There is little doubt that the world's greatest charitable enterprise suffered from two basic difficulties at its inception.

First, its initial operations were hampered by lack of a clean-cut character and directive and by the agency's dependence on the military in various theaters. It could not obtain its own ships or land transport and was forced to allot space to Army officers, as in Yugoslavia.

Secondly, UNRRA was a late-comer in its search for competent manpower and its drastic need for personnel, after millions of men and women had been drafted into military and semimilitary jobs, forced it to dip lower into the barrel of human reserves than it would perhaps have wished.

There has been incompetence and political and personal jealousy and bickering; some unrealistic and impracticable dreaming by insufficiently experienced welfare workers; some interference in local politics, and perhaps more than a modicum of black marketing and slipshod administration.

UNRRA has been aware of these faults. As Lt. Gen. Sir Frederick E. Morgan, who heads the administration's German operations, confined to the care of displaced persons, has observed, these personnel problems are being dealt with.

Similarly, liaison between the military command and UNRRA officials is being improved. In areas such as the Middle East, where the agency is drastically reducing its work with a view to complete termination, local inflation and shipping scarcity have added to such troubles as efforts of rival beneficiary nations to dip into the grab bag.

RECORD IN GREECE CALLED TYPICAL

In Greece the record of UNRRA appears typical: at its worst in the beginning and at

its most successful later. Initially there were reports that considerable UNRRA supplies were appearing in the black markets, and intramural bickerings and back-biting were at a peak soon after the Greek liberation.

After this period of growing pains, however, the agency has done so tremendous a job that it is regarded as indispensable. Its food, clothing, cotton goods, and building materials have helped a stricken country climb to its feet and its medical aid prevented widespread disease.

In Yugoslavia, although the critical food problem is far from solved, UNRRA complains this is the fault of the Allied allotment program. Nevertheless, the Organization is trying to save 3,000,000 in the western part of the country from starvation and to help supplement the diet of 4,000,000 others as well as providing special food for 1,000,000 undernourished children.

The paramount charge against the UNRRA administration in Yugoslavia is that Marshal Tito's huge army is entirely supplied through that agency and that only government supporters receive rations. The initial mistakes of UNRRA and the shortage of current supplies, however, probably are the basis of exaggerated attacks by the large opposition in that violently political country.

In Italy, despite intermittent government crises, the $50,000,000 spent by UNRRA since last March had undoubtedly helped enormously to avoid a truly critical state.

In Poland, full-scale UNRRA operations are just getting under way and substantial supplies have recently begun to circulate through the country: Food, medicine, clothing, and agricultural implements. The appalling shortage is slowly being relieved.

HOUSES FOR CZECHOSLOVAKIA

In Czechoslovakia, especially in the eastern part, UNRRA shipments of food and clothes and the construction of prefabricated shelters have speeded recovery.

UNRRA, being a joint Allied enterprise, naturally mirrors intra-Allied disputes. Thus, for example, the Russians openly frown on its displaced persons activities in Germany and Austria because of their contention that a DP is someone who is either too lazy or too disloyal to go home.

Almost all those DP's are citizens of areas claimed as Soviet or with pro-Soviet governments.

Regardless of such disputes and UNRRA's own difficulties, millions of Europeans are looking pathetically to it for help during the ensuing months.

---

POLAND HOPES TO SPEED RECOVERY WITH STIMULANT OF OUTSIDE HELP

(By Michael L. Hoffman)

LONDON, December 15.—Although the full scale of UNRRA operations in Poland are just getting under way, supplies are already reaching that stricken land in substantial quantities and UNRRA has become almost the only source of outside aid for Poland, according to officers of the organization's European headquarters in London.

Stressing the excellent cooperation received from the Polish Government and the enthusiastic reception their representatives are getting from the Polish people, UNRRA spokesmen are hopeful that Poland's shattered economy will react quickly to the stimulant provided by food, medical supplies, and agricultural and industrial equipment.

In discussing UNRRA operations in his country, Henryk Strasburger, Polish Ambassador in London, and Polish officials just back from Warsaw said that acute shortages of food, clothing, and medical supplies were being greatly relieved by UNRRA. Mr. Strasburger expressed the deep gratitude of the Polish people for this help and said that his Government was highly pleased with the manner in which the international organization carried out its mission to date.

POLES GRATEFUL FOR ANYTHING

"Our people are so poor that they are grateful for anything," said Mr. Strasburger, who described how he had recently found members of his own family, formerly wealthy Polish industrialists, without shoes for the winter.

The start of shipments to Poland was delayed by the absence of a government with which arrangements for the handling of supplies could be worked out and not until the end of July did the first UNRRA mission reach Warsaw. Shipments of supplies through the end of October totaled only 210,313 tons, compared with more than 1,000,000 tons to Greece by the same date.

October and November have seen steady progress and in December it is expected that more than 77,000 tons will be shipped to Poland by water and substantial additional tonnages in the form of trucks and locomotives by land.

More than half of the shipments to date consist of food with the rest distributed almost evenly among clothing, agricultural rehabilitation supplies, and industrial supplies. Medical supplies, though small in tonnage, are filling critical needs. Seventy entire hospitals have been shipped to areas in which almost no usable buildings are left standing.

An entire United States Army repair plant, capable of overhauling 3,000 trucks a month, has been moved from England to be reassembled in Poland and the 3,000 trucks already shipped in are being steadily augmented by convoys moving overland from American and British Army bases.

UNRRA in Poland faces to an acute degree the problems of shattered transportation systems, inadequate local facilities for distribution and shortages of trained local personnel that are common to all devastated areas of Europe. Officials just returned from a survey of the distribution of UNRRA supplies in Poland express admiration for the spirit and cooperativeness of all Poles and say that they have met none of the evasiveness, resentment at outside "interference" and stubborn insistence on following outworn administrative procedures that have been found in so many countries.

Maj. Gen. C. R. Stein, Canadian adviser on industrial rehabilitation, who traveled extensively in Poland between July and October, summed up his impressions in the statement: "One feels that these people will come back and come back quickly."

The great fear of UNRRA medical officers concerned with eastern Europe has been that typhus would ravage the land in the wake of the undernourishment and outright starvation suffered by the people during the war. Speaking with cautious optimism, Dr. M. M. Goodman, of UNRRA's health division, who recently returned from a tour of Poland, said that typhus was far less prevalent in Poland than had been feared and was much rarer than after World War I.

About 231,000 typhus cases were recorded in Poland in 1919, but only 13,800 were reported during the first 9 months of this year. Allowing for the fact that Poland has lost some eastern territory in which typhus would normally be relatively high and for the difference in the period covered, this is still, in Dr. Goodman's opinion, a much better record than had been anticipated.

LECTURES AID POLISH DOCTORS

Tuberculosis and venereal disease are the worst threats in Poland this year, he declared, but energetic measures against both are well under way. A unique feature of UNRRA's program for Poland is the organization of a series of medical and health lectures to local physicians, given by British, Canadian, and United States experts, to bring Polish doctors up to date on methods for combating disease.

Inquiries in UNRRA and Polish circles in London elicited no information or comments indicating that Soviet military authorities in Poland were interfering with UNRRA work or with Polish agencies distributing the supplies. The Russians, one UNRRA official said, are keeping hands off and frequently carry UNRRA personnel to otherwise inaccessible places in Soviet military planes.

When asked about plans for Poland, UNRRA spokesmen say that everything depended on the United States Congress. Most of what Poland needs can be obtained only in the United States.

If United States financial support is continued, UNRRA will carry on in Poland until the end of 1946. Otherwise operations will end next March.

---

NEXT YEAR'S RELIEF NEEDS IN ITALY DWARF ASSISTANCE GIVEN IN 1945

(By Milton Bracker)

ROME, November 30.—The Allied Nations Relief and Rehabilitation Administration's Italian mission has been administering since last March a $50,000,000 limited program under which specialized foods, medicines, clothing and services have been provided to needy Italians and to some non-Italian refugees.

About three-fifths of the supplies involved have already reached Italy and about one-third have already benefited the ultimate consumer. The difference is in the "pipeline"—a chain of warehouses and related installations that, according to plan, will be tapped more heavily during the winter months than heretofore.

The loss resulting from theft, spoilage, and all other causes is placed by Spurgeon M. Keeny, director of the mission, at less than 1 percent—beyond the calculated loss of all wartime cargo due to shipping conditions, etc., of up to 5 percent.

But everything that has been done so far is dwarfed by the prospects for 1946.

TENSE DAYS FOR MISSION

Italy's share in the UNRRA appropriation that has been before Congress is $450,000,000. On the prospect that the funds will be forthcoming and to assure a continuous flow of supplies, $61,500,000 has been made available in advance to bring UNRRA supplies for Italy at least to shipside in the United States.

Thus, it is obvious that these are tense days for the UNRRA mission here. They are also tense for those Italians who realize what the potential UNRRA program—or the lack of it—means to Italy.

Assuming that the Italian Government was able to effect a maximum import program for 1946—touching items such as wheat, coal, oil, medicines, and industrial equipment—the UNRRA would still be called upon with its $450,000,000 to meet 43 percent of basic requirements, including freight costs.

The point is that political and economic conditions affecting Italy are most unlikely to permit the Government to effect anything like a sound import program.

BIG FACTOR DURING 1946

The result is that the burden of the UNRRA becomes proportionately greater. It is plainly the key factor in civilian economy in the 12 months ahead.

Aware of this, the local UNRRA is doing its best to make its program so effective in 1946 that there will be no further need for the UNRRA in Italy in 1947.

There are a great many snags, and a basic one is the indeterminate international status of Italy. Without benefit of even an interim peace treaty, any Italian Government tends to be timid and unsure. Those who have a voice in negotiating with the UNRRA often do not agree on the most-needed items.

They have often failed lamentably to understand that items like seed potatoes are worthless unless on hand—and therefore ordered—in time for the planting season. They tend to think too often in terms of bulk

wheat which would guard against a politically dangerous cutting of the bread ration, and not in terms of materials that would stimulate the natural economy on which, in the long run, a nation must live.

ALLIED COMMISSION PROGRAM

One of the many key problems facing the UNRRA now is to assure a smooth "pick-up" from the Foreign Economic Administration's Allied Commission program, which will run out on December 31. This was based on $100,000,000 originally made available before UNRRA aid to Italy was first voted at the Montreal conference in September 1944.

The Allied Commission, through its economic section, has been handling all questions of supply and distribution. The economic section has now been reorganized with a view to integrating with the UNRRA as of January 1.

Harlan Cleveland, youthful head of the economic section, and two important aides will become deputy directors of the UNRRA mission under Mr. Keeny. The latter will expand his over-all personnel from about 300 to about 600, with the Italian authorities taking title to incoming supplies at dockside or at the warehouses, depending upon the nature of the shipment.

THEFT RISK SERIOUS

The risk of theft is serious all down the line. Recently "intact" crates of canned milk showed up with the cans turning out to have been slashed and filled with sand to equalize the weight.

Heretofore the UNRRA aid to Italy has been broadly restricted to child and maternal care, refugees, and public health. Thanks to the decision of the UNRRA conferees at London, it will become the sole channel for the funneling of nonprivate outside aid into this war-ruined country.

The UNRRA's record so far has been good; the Allied Commission has heard from Washington that the "Italian program is considered to be one of the bright spots in the UNRRA world picture."

But to enable it to keep pace on the basis of a full-scale program through a cruel winter—with a drought that caused a 2,000,000-ton wheat shortage darkening the outlook—two things would help greatly: First, a definition of Italy's status vis-a-vis the Allies, who, after all, are footing the bill for the UNRRA; and second, the stabilization of domestic politics under the elections of next spring.

Meanwhile the UNRRA Italian mission is hopeful.

I hope with all my heart that the women of America will back to the utmost the UNRRA program for feeding the starving in Europe.

The facts are that millions of European women and children will perish this winter unless Americans can get food, clothing, and medical supplies to them shortly.

I am, naturally as a woman, most concerned about the children and the mothers. There can be no peace where pregnant mothers and children are naked and hungry. The war is over but Europe's children will never believe you while they are dying for want of food and shelter. The whole peace of the world depends on the rapidity with which Europe and Asia now recover from the ravages of war. The recovery of human bodies comes first.

The UNRRA program will save hundreds of thousands of lives, and is the most important "peace legislation" that this Congress can pass.

Let every woman do her utmost to urge her local newspapers, radios, and Representatives in Congress to support it.

## Youth in Government

EXTENSION OF REMARKS
OF
## HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I desire to call attention to an article "Young Blood in Washington," by that distinguished writer, Mr. Jack H. Pollack, which appeared in the December issue of PIC magazine. The article calls attention to the number of young men who are now administering important posts in Washington, and I am happy to call it to the attention of the Members. It follows:

YOUNG BLOOD IN WASHINGTON—GOOD OLD UNCLE SAM IS SHEDDING HIS WHISKERS AND STUFFED SHIRTS ARE STEPPING ASIDE FOR YOUTH

(By Jack H. Pollack)

Youth is "busting out all over" on the capital carousel. Though traditionally an oldsters' town, Washington is teeming with new, eager, young faces these days. Federal officials, in the springtime of their careers, are blossoming like cherry trees along the Potomac.

Uncle Sam is shedding his whiskers. Not since the early thirties when juvenile brain trusters flocked to Washington, has there been such an influx of young blood. The Truman administration is using father time's scythe to cut down the ages of its important policy-makers throughout the Government. This trend is evident in the hoary, old-line agencies as well as in the cabinet. President Truman—youthful in spirit himself—is being advised, directly or indirectly, by some of the best young brains in the country.

The prospect for enthusiastic young men in Government service looms even brighter in the months and years ahead. The future administrators of the Nation's laws will not be superannuated Federal hacks or frock-coated, top-hatted, boiled-shirts clinging to their sinecures for dear life. Rather, they are gradually giving way to a rising generation of new-fledged workers casting off khaki for Federal swaddling clothes. During the next decade, a new generation of Government employees, mainly World War II veterans, will be in Uncle Sam's driver's seat.

More and more, the capital city shapes up as a young man's town, especially a veterans' one, judging from the new Federal policy of hiring only exservicemen. Steady, good job opportunities, await those seeking to serve their country in peace—as in war. (The Civil Service Commission can supply details.)

Typical of the upsurge of Capital youth is the recent appointment of 33-year-old Col. Frank McCarthy as Assistant Secretary of State. The youngest man to hold a top State Department post in many years, McCarthy succeeded conservative, graying Brig. Gen. Julius C. Holmes.

Hailing from Richmond, Va., this one-time teacher, police reporter, and Broadway press agent for George Abbott's Brother Rat, is now really in the big show. Commissioned a first lieutenant in July 1940, this good-looking, blue-eyed chap won rapid promotions—as well as a Distinguished Service Medal. Virginia Military Institute alumnus, he became military secretary to Chief of Staff George C. Marshall, accompanying him to all Allied conferences including Casablanca, Cairo, Tehran, Yalta, and Potsdam. It was his quiet, capable work at these international parleys that attracted the attention of President Truman and Secretary of States Byrnes.

Asked how he liked his new job, McCarthy modestly replied, "I always thought I wanted to be a newspaperman, teacher, or Army officer; I had an opportunity to try all of them and wound up in something entirely different."

Another youthful Capital luminary is 30-year-old Edward F. Pritchard, Jr. One of America's keenest legal minds, colorful, roly-poly "Pritch" once was suspended from Princeton for staging a dormitory beer party. During the past few years, in quick succession, he has been law clerk to Supreme Court Justice Frankfurter, special assistant to the Attorney General, a top policy-maker in the Office of Economic Stabilization, Federal Loan Administration, Office of War Mobilization and Reconversion, and aid to Secretary of the Treasury Vinson.

Two years ago, it looked as if his Government career would be snafued when he was drafted. A 270-pounder who formerly tipped the beam at a cool 310, Pritch was rushed into a tent-like khaki uniform. Philosophically, he shrugged, "They've scraped the bottom of the manpower barrel—now they have to take the barrel itself."

Most of his Army career was spent in the hospital. "When I saw that obstacle course with the sewer pipe I had to crawl through," he recalls, "I was pretty sure I couldn't make the grade." (Avoirdupois note: Much as he loves to eat, the Army got "Pritch" down to 225 and he vows he'll reach 195 yet.) Kentucky-born Ed Pritchard has the senatorial itch these days, with his eye on Baseball Commissioner "Happy" Chandler's Senate seat, and may resign.

Likewise in the front row of the administration's reconversion battle is burly, broad-shouldered Robert Roy Nathan. At present, Deputy Director for the Office of War Mobilization and Reconversion, Bob replaces Maj. Gen. Lucius B. Clay, at present with the occupation forces in Germany. The tough-looking, indefatigable man now in one of the Capital's top posts, was born in Dayton, Ohio, 36 years ago and came up the hard way.

Nathan worked as a salesman, tutor, and at night in a factory to earn money for his University of Pennsylvania education. Joining the Department of Commerce in 1933, he rose speedily until he was one of the chief economic planners in our swing-over from peace to war. As two-fisted WPB Planning Committee chairman, Bob was a crusading civilian foe of Army miscalculation. Washington grapevine gossip had it that the brass-hats were tickled when he was drafted. It was while in the Army that he wrote Mobilizing for Abundance, a weighty book charting the path the United States should follow in returning to a peacetime economy. Now, even as he helped mobilize the Nation for war, Nathan is helping lead the way back to peace and prosperity.

One of the least known but closest confidantes of President Truman is 37-year-old Matthew J. Connelly. This shrewd New Englander is one of the most popular and influential young men in the Truman administration.

Born in Clinton, Mass., and a Fordham graduate, Connelly is proud of the Irish way his name is spelled. He was hired by Senator Truman to be the chief investigator for the famous Truman committee when it was exposing war racketeers. And before that, he was a crackerjack investigator for other leading congressional committees. He got his start in Wall Street.

Connelly was the executive assistant to Vice President Truman and today is appointment secretary and confidential aide to the President.

Another shining light on the capital kaleidoscope is brisk, clear-thinking, 39-year-old Paul Herzog, recently appointed Chairman

of the National Labor Relations Board, which passes on union representation. An expert labor relations troubleshooter with a chain-lightning mind, slim, sandy-haired Herzog was outstandingly successful as a member of the New York State Labor Relations Board from 1937 to March 1944 when he resigned to become a Navy lieutenant.

In 1933, he journeyed to Washington seeking a job. An ex-school teacher, with modest tastes, he asked for a $2,400 position. "That won't do," snapped Senator WAGNER, who was to father the National Labor Relations Act (the Wagner Act). "I need a $3,000 man. I'll give you that and if you're not worth it, I'll fire you."

Needless to mention, the ebullient Herzog was soon worth far more, becoming highly regarded by all labor factions. A proud father of two children, he puffed on one of his favorite briars and observed, "I would be a better father to them if the A. F. of L. and CIO would get together."

Urbane, quiet, 35-year-old Abe Fortas, Under Secretary of the Interior, is still another Capital prodigy. Harold Ickes' right-hand man has been a boy wonder in government for over a decade. At 23, Tennessee-born Fortas was a leading Agriculture Department official, acting as a negotiator between feuding fruit interests. Before that he won a scholarship from the Yale Law School, where he was graduated with honors.

He was a key man in the Agriculture Adjustment Administration, Securities and Exchange Commission, and Public Works Administration before coming to the Interior Department. When discharged from the Navy last year, President Roosevelt reappointed him to his present job.

Likewise, no Capital newcomer is Henry C. Iler, 38, assistant to the Federal Security Administrator. An Owensboro, Ky., native, Iler took a $25-a-week Government job in mid-depression. With a flair for getting things done, he found his niche when he became assistant to the National Youth Administrator, specializing in labor and congressional relations. Iler is a member of the Advisory Committee in the Office of Vocational Rehabilitation—which assists in rehabilitating physically handicapped veterans. A popular member of the Blue Grass delegation in the Nation's Capital, politics may yet claim this ace trouble-shooter.

Numerous other young men are in key Government positions. Federal Communications Commission Chairman Paul Porter, present policeman of the radio industry, is 39. So is soft-voiced Donald S. Russell, ex-Army major, now a special assistant to his friend, Secretary of State Byrnes. Even the most powerful man in the Truman administration, Postmaster General Robert E. Hannegan, is only 42.

Government is no longer the exclusive domain of stuffed shirts in their fifties and sixties. Confident, competent young men who never ran for office or met a pay roll are becoming increasingly conspicuous in the National Capital. They are fast becoming the leaders of today—and undoubtedly tomorrow.

---

## Propose Department of Medicine and Surgery in the Veterans' Administration

EXTENSION OF REMARKS

OF

### HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am very glad that H. R. 4717, an act to establish a Department of Medicine and Surgery in the Veterans' Administration, was passed without amendment by the Senate on December 20, 1945, and will now be sent to the President for his consideration. While I should have liked certain amendments added, it was important to have this legislation passed. It has been my wish for years to have a Department of Medicine and Surgery.

This bill has been enacted to meet an urgent need of the Veterans' Administration for satisfactory organization of the medical activities and to attract necessary personnel, particularly doctors, dentists, nurses, and attendants. Legislation to accomplish this general purpose with the approval, in principle, of the President was recommended by both General Hines and General Bradley as being essential and vital. The act abolishes the Medical Service in the Veterans' Administration as at present constituted, and establishes in its stead a Department of Medicine and Surgery under a Chief Medical Director.

The bill incorporates broad provisions as to organization and authority. It provides specifically for certain positions with adequate salary stipulations, specified salary rates for doctors, nurses, and dentists, and a special salary range for attendants. It authorizes appointments by the Administrator of Veterans' Affairs to certain professional positions without regard to civil service. The civil-service retirement system, however, will be applicable to all positions in the Department of Medicine and Surgery. Authority is provided to discipline or discharge unsatisfactory or disqualified employees in certain categories without the restrictions of the laws and regulations pertaining to civil service.

Section 1 of the bill, in addition to abolishing the medical service in the Veterans' Administration and establishing in its stead a Department of Medicine and Surgery under a chief medical director, provides that the functions of that Department will be those necessary for a complete medical and hospital service to be prescribed by the Administrator of Veterans' Affairs.

Section 2 of the bill provides that the Department of Medicine and Surgery shall include the office of the Chief Medical Director, Medical Service, Dental Service, Nursing Service, and Auxiliary Service.

Section 3 of the bill provides that the office of the chief medical director shall consist of the chief medical director, one deputy medical director, not to exceed eight assistant medical directors and such other personnel and employees as may be authorized by the act. The chief medical director will be appointed by the Administrator at a salary of $12,000 per year; the assistant medical directors will receive a salary of $11,000 per year each, and the deputy medical director will receive a salary of $11,500 per year; the director of the nursing service will be paid a salary of $8,000 per year and the deputy director of nursing service will receive a salary of $7,000 per year. The chief pharmacist, chief dietitian, chief physical therapist, and chief occupational therapist each will receive a salary of $6,000 per year. The appointments will be for a period of 4 years, subject to removal by the Administrator for cause. Reappointments may be made for successive like periods.

Section 4 provides for appointment by the Administrator of additional personnel on two groups: (a) Doctors, dentists, and nurses; (b) managers, pharmacists, physical therapists, occupational therapists, dietitians, and scientific personnel and other medical and dental technologists.

Section 5 prescribes the conditions of eligibility for appointment to the Department of Medicine and Surgery. The first requirement is that any person so appointed must be a citizen of the United States. There are then provided the professional and other requirements for doctors, dentists, and nurses; and in the auxiliary service—managers of hospitals, homes, or centers—pharmacists, physical therapists, occupational therapists, dietitians, and other auxiliary employees. It is provided that persons may be appointed under the act while on terminal leave from the armed forces and may be paid for their services rendered under such appointment notwithstanding any law or regulation to the contrary.

Section 6 provides that the appointments of doctors, dentists, and nurses shall be made only after their qualifications have been satisfactorily established in accordance with regulations prescribed by the Administrator and without regard to civil-service requirements. There is provided a probationary period of 3 years with provision for review of the employment records and separation from the medical, dental, or nursing services if the person is found not fully qualified and satisfactory. Provision is made for promotion of doctors, dentists, and nurses on the basis of examinations, and automatic promotion may be made within grade. Doctors, dentists and nurses in the present Medical Service will be continued in their present positions until their qualifications are determined. Civil-service reinstatement rights are protected in the cases of those who at time of appointment have a civil-service status and whose employment in the Department is not continued.

Section 7 establishes the grades and per annum full-pay ranges for positions of doctors, dentists, and nurses. The Administrator is authorized to prescribe by regulation the hours and conditions of employment and leaves of absence of doctors, dentists, and nurses.

Section 8 authorizes the Chief Medical Director to rate any qualified doctor appointed under section 4, subsection (a), as a medical or surgical specialist, but no person may at any one time hold more than one such rating. It provides the conditions under which such rating shall be granted, its duration, and that the person so rated shall receive, in addition to his basic pay, an allowance equal to 25 percent of such pay, but the pay plus the allowance may not exceed $11,000 per annum.

Section 9 provides that persons appointed to the Department of Medicine and Surgery shall be subject to the provisions and entitled to benefits under the Civil Service Retirement Act, as amended.

Section 10 provides for disciplinary boards and action on their recommendations affecting doctors, dentists, and nurses under section 4, subsection (a).

Section 11 provides for appointment of additional employees, other than those specified in section 3, subsection (a) of section 4, and section 14 of the act, as may be necessary. It is provided that employees in the Medical Service, as at present constituted, other than those provided in section 3, subsection (a) of section 4, and section 14, shall receive original appointments to the Department of Medicine and Surgery in their present civil-service status, upon proper certification therein provided. This section also provides that the per annum salary range for attendants shall be $1,572 minimum to $1,902 maximum.

Section 12 provides for a special medical advisory group, its composition and functions. Provision is made for regular calendar quarterly meetings and for the number, terms of service, compensation, and allowances to members.

Section 13 provides for the detail by the Chief Medical Director of employees under section 3 and subsection (a) of section 4 to attend meetings of associations for promotion of medical and related sciences. Authority is granted to place employees coming under the foregoing sections on duty for a period not in excess of 90 days in schools of the Army, Navy, and Public Health Service, and in civil institutions with the consent of authorities concerned, for the purpose of increasing professional knowledge or technical training. Payment of necessary expenses is authorized. Any person authorized to attend such course will be required to reimburse the Veterans' Administration the expenses thereof if he voluntarily leaves the service within 2 years after the completion of such course.

Section 14 provides for employment by the Administrator, upon recommendation of the Chief Medical Director, and without regard to the Classification Act of 1923, as amended, of doctors, dentists, and nurses on a temporary full-time, part-time, or fee basis, and others on a temporary full-time or part-time basis, at such rates of pay as he may prescribe, but no temporary full-time appointment shall be made for a period of more than 90 days.

This section also authorizes the establishment of residencies and appointment to such positions without regard to civil service or classification laws, rules, or regulations; the conditions of such employment; and the customary amounts and terms of pay during the period of such training. Residency training in most specialities would embrace training outside the hospital in connection with the school, part of the time not being spent on work directly productive for the Veterans' Administration. This authority is granted in order to retain uniformity with actual practice thoughout he Unied States in connection with residency employment because the average pay scales in residency employment are less than the scale for a minimum entrance salary of positions, such as doctor, junior grade.

Section 15 provides that the Chief Medical Director, with the approval of the Administrator, unless specifically otherwise provided, shall promulgate all regulations necessary to the administration of the Department of Medicine and Surgery and consistent with existing law, including regulations relating to travel, transportation of household goods and effects and deductions from pay for quarters and subsistence; and to the custody, use, and preservation of the records, papers, and property of the Department.

## People's Champion

EXTENSION OF REMARKS
OF
### HON. GEORGE E. OUTLAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes from the Washington Daily News:

PEOPLE'S CHAMPION
(By Thomas L. Stokes)

President Truman showed rare perception when he selected Mrs. Roosevelt to be a member of the United States delegation to the United Nations Assembly which has its first meeting in London in January.

She will be more than a representative of the women of America, though she fills that role excellently.

There are other women who could have done that capably and with distinction. But Mrs. Roosevelt's designation means far more than that.

She, better than perhaps any other person, can represent the little people of this country and, indeed, of the world. She has been their champion. She has spoken for them when it took courage. Better than most, she has a feeling for them and their problems, despite the different strata from which she comes. She has their confidence.

She knows of their need and longing for peace and security in their lives and homes, and knows what happens to them in depressions and wars, which it is the purpose of UNO to eliminate. She understands the sacrifice of wars, for her four sons were in the thick of it.

Though she loved peace and was active in promoting it, she knew why it was finally necessary to fight. She knows why it is necessary to prevent another war. And her understanding of our war aims equips her to sit in the legislature of the United Nations, which must cope with the problems that stand in the way of these aims.

Mrs. Roosevelt is a controversial figure. That says something for her of itself. She has convictions, and she does not hesitate to fight for them. The New Deal era was richer for her influence in it. That influence was far greater than appeared puolicly.

She has never been content to let things rest with mere pronouncement. She has been active in organizations of people to get things done—in civic affairs, in labor, in politics. She was busily engaged in political activity the first time I had the privilege of meeting her, back in 1928, when she was working with the women's division in the 1928 Presidential campaign of Alfred E. Smith. Every day and all day she was at her desk in New York headquarters.

From an oddity in the White House, a woman who thought her own thoughts and lived her own life—and she was unique in this respect, certainly—she has won her way to a place never occupied in American life by the wife of a President, and perhaps never occupied by any other woman in our public life.

She suffered constant criticism, private and public, but it did not deter her. In this connection I can recall the criticism, particularly from men, I heard of her when I went back home to the South after the Roosevelts had been in the White House about a year.

What seemed to be troubling them was that she might be giving the women ideas. She might break down the pattern that the male liked to imagine for southern women—in the home, among the pots and pans and children, not bothering their pretty heads (properly tied up with a dust cloth) about what was going on in the world.

But the women seemed to like it, most of them. And so her influence with them grew, all through the Nation.

A scene comes back from the 1936 campaign. The Roosevelt special train was moving slowly into Columbus, Ohio, in a drizzling rain. Some of us were in the diner, looking out at the crowd massed on either side. There were many women among them. Mrs. Roosevelt sat at a table ahead of us. When the women spied her, as the train rolled slowly forward, up went their hands in an automatic salute. Their wet faces glowed. It was almost like a trained chorus, though it was a completely voluntary tribute, as the hands went up, one after another. There was the individual delight of spotting her.

That is what she takes to England with her.

## How Much in Foreign Loans? To Whom? For How Long?

EXTENSION OF REMARKS
OF
### HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. MUNDT. Mr. Speaker, in view of rumors and reports that from 10 to 15 foreign countries in Europe, Africa, and Asia have reacted to the announcement that President Truman has agreed to a $4,004,000,000 loan to Britain at lower interest rates than American must pay to borrow the money to finance the loan, by preparing justifications in their own behalf for similar loans—some larger and some smaller—it is essential that before acting on any of the proposed foreign loans, Congress be supplied with a list of all of them.

It would be a reckless gamble with both America's solvency and her reservoirs of good will abroad if we were to deal generously with the first requests and then through force of circumstance be forced to close our coffers entirely to the requests of those submitting their needs less promptly.

Better by far to delay action on these stupendous foreign loans which may very well once again eventuate as outright gifts or uncollectible bad debts as in the very similar policies following World War I, until we have an opportunity to examine the full list of loan applicants and to measure them against our domestic financial conditions and our ability to meet all the requests of foreigners.

In this connection, Mr. Speaker, I call attention to the following editorial

clipped from a recent issue of the Sioux Falls (S. D.) Daily Argus Leader:

HOW MUCH IN LOANS?

Perhaps it would be well for the United States to survey the entire picture before granting foreign loans.

We may be sure that the proposed credit to Great Britain isn't the only one that will be sought. Others will be asking for credit and their requests will be influenced to some extent at least by our general attitude.

The loan to Britain, in fact, will establish a precedent. Thus it appears that if we are to make loans we should comprehend the full prospects before embarking on the program.

From dispatches recently printed it appears that Russia expects to ask for $6,000,000,000, China $3,000,000,000, and France $1,000,000,000. This is a total of $10,000,000,000. Added to the $4,400,000,000 British proposal, we have a total of $14,400,000,000.

But, of course, that isn't the entire story. There are several lesser nations that might come to us with tin cups in their hands. These are likely to be sufficiently numerous to swell the total to $20,000,000,000.

So let's study the matter as a whole. Should we make these $20,000,000,000 in loans and, if so, where will we get the money?

## Settlement of Disputes Between Management and Labor

EXTENSION OF REMARKS
OF
### HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WASHINGTON, IOWA, *November 24, 1945.*
DEAR MR. MEMBER OF CONGRESS,
*Washington, D. C.:*

Recent industrial developments warrant, in the opinion of this writer, this reminder to you on behalf of the American public. The growing disturbances between management and labor have now reached a point that our Government, including both the executive and legislative branches, must take some definite action to bring order out of this condition, if we make any serious pretenses that our system of government, that we so universally brag about, as adequate to serve the needs of the American public, be justified.

It is high time that our elected officials recognize the fact that they are by oath obligated to function for the benefits of the general public and that they are not in office to support the whims and selfish interest of special groups, including both management and labor. The fault no doubt is not all on one side. Both management and labor share in the blame. The most blame worthy of all is the government that tolerates the present lawless methods of settling disputes between management and labor.

The American people, slaphappy with all the economic and social novelties that have been foisted on them by their Government the past few years, have now exhausted their patience and can no longer tolerate being trampled on by selfish contending groups who display absolutely no interest in the general welfare of the American public. The public has served long enough as a guinea pig for these crack-brained social and economical experimenters in government. The public you are sworn to serve have had their interest shunted aside too long while Members of Congress and high executives cater to special groups for their own personal political gain. The public should not be expected longer to be subjected to hardships and inconveniences and loss by these growing strikes that now affect, not only privately owned business and their employees, but the public services as well, such as transportation and communication.

Even some of the strictly Government services have been interrupted and hampered by these strikes. Some orderly method must be established by law to settle these controversies between management and labor the same as other disputes, if we can seriously claim our democratic system to be adequate to serve our people.

The true test of whether or not an elected official is a statesman or just a politician, can be determined by his willingness, if he be a statesman, to work for the common good of all the American people, or if he be a politician, working for his own interest politically by catering to certain groups and supporting their interest regardless of the effect on the general public. Now is the time for you to measure yourself and determine which class you are in, whether you are a statesman or a politician, you will know the answer.

You know—any half-bright person must know—that the public interest can only be served by providing some other means than strikes to settle industrial disputes. This lawless method must be stopped and an orderly tribunal set up to dispose of these controversies if we are to survive as a prosperous and happy people or continue for any important length of time as a great nation. For this reason I ask you to give serious consideration to the development of some method to establish a tribunal that can settle these troubles and these strikes.

Very truly yours,

LOUIS J. KEHOE.

## Crisis in China

EXTENSION OF REMARKS
OF
### HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from an article by Charles J. V. Murphy from Life for December 17, 1945:

CRISIS IN CHINA

(By Charles J. V. Murphy)

As General of the Army George C. Marshall made ready to leave for China to be the new Ambassador, Secretary of State Byrnes suggested smoothly that American policy would of course continue to support the established government of Generalissimo Chiang Kai-shek—"The most satisfactory base for a developing democracy."

To an American fresh from China this sounded about right, a nonweaseling statement of intent suited to the immediate emergency in Asia and American responsibility in the Pacific regions where our military power has smashed up the old balances. But it certainly was not the policy in October and November.

THE ARMY DECLARES A FURLOUGH

In October, American policy going into China met American policy going out. Thousands of soldiers, whose job (except for the small Air Force) had been to service and train the Chinese, jubilantly filled their barracks bags and crated their souvenirs. "Home by Christmas" was the password from the almost deserted flying fields of Chengtu, beyond Chungking, to the PRO offices in the Broadway Mansions on Suchow Creek in Shanghai. Except for air lifting four Chinese armies into north China, auctioning off the left-over equipment, setting up a small professional training mission and one or two other odd jobs, the Army figured its job was done. In fact its commander, Lt. Gen. Albert C. Wedemeyer, a fine officer, was not in China at all but in Washington, reportedly helping to reorganize the Army in China. Ambassador Patrick J. Hurley was there, too, debating whether to return to Chungking or resign.

* * * * *

While the Army was declaring itself a furlough, the First and Sixth Divisions of Marines, straight from the battlegrounds of the western Pacific and in full battle regalia, were moving into north China, at Tientsin, Peiping, and the port of Tsingtao in Shantung. Officially their job was to disarm the Japanese troops in north China. But in the back of their minds was the idea that they were also expected, on behalf of the Chinese Government, to maintain law and order—no fooling.

I visited the marines in Peiping, Tientsin, and Tsingtao in mid-October, and the contrast between their spit and polish and the Army was too glaring not to be noticed. Of course, they were combat troops, with a brisk businesslike air. Many of their officers had served in China before the war and remembered it with love and, arriving from an ocean region devoid of ideological politics, they had escaped the rancor and cynicism that warped the judgment of so many Army men who knew only the quarrels, failures, and meanness of Chungking. The marines understood they were in China to finish a job.

In November I saw the marines again. Their morale was shot. They were fed up with the Chinese. They were interested in only two things: "When do we go home?" and "What the hell are we doing here anyway?"

It was hard to believe that the occasional crack of ancient German mausers in the Tientsin suburbs had produced this change overnight. The marines know a dangerous war when they see one and the splutter in the Chinese countryside scarcely raised an eyebrow. What unstrung the marines was the bewildering clamor back home to get the troops out of China and the crossfire of China's civil war. Marines get homesick, too, and when the erroneous report reached Tsingtao that even the New York Times wanted them out, they can hardly be blamed for thinking Americans had no business in China.

The unhappy fact is that just about this time the American Army commanders in China, at a down-to-brass-tacks conference in Peiping, discovered they were at a precipice. Unless they stopped the withdrawal or at least slowed it down, there would really be a civil war in China.

A QUEER BUSINESS

* * * * *

So far the total American casualties directly attributable to the civil war are two Marines slightly wounded by stray bullets and one killed. One young United States Army captain was shot down on a railroad platform 2 months ago by Communist troops on no apparent provocation. The Japanese, on the other hand, in 1,000 brushes a month with Communist guerrillas since the end of the war, have had nearly 3,000 casualties.

In short, the Japanese army in China, although much reduced, is still a going concern. * * *

But the conditions that produced this queer arrangement, once understood, help to explain the riddle of China—a riddle which this brief report cannot hope to unwrap.

Last summer the Communist trouble seemed under control. Chiang Kai-shek invited the Communist leader, Mao Tze-tung,

to leave his Yenan stronghold and come down to Chungking to try to settle their differences. For a long time the Generalissimo was loath to make the gesture. "Let him come to Chungking like any other Chinese citizen," he said. "Why should I have to treat the Communists as though they were a foreign power?" In the end, however, he unbent—"May I humbly invite you. * * * This involves our national welfare. Yours most anxiously."

* * * * *

In the course of the next 6 weeks Chiang and Mao met a number of times and when they were not meeting, their representatives were. The Communist leader proclaimed, "The war is over. We have entered the period of peace." His chief aide, Chou En-lai, said, "Mr. Chiang is not only the leader of China today. It is our hope that he will be the leader of China during the period of peace and national reconstruction."

By the end of September even the cynics in the Press Hostel, who had scoffed at the idea that Mao Tze-tung would ever come to Chungking or that, if he came, he would ever make terms with his enemy, had decided prospects were bright for a settlement.

* * * * *

WHAT THE COMMUNISTS WANT

* * * * *

What went wrong? Who started the shooting?

As to the issues: The Communists made a big point about popular elections, free speech, free press, punishing of traitors, freedom of political prisoners, and so on. China could certainly stand plenty of reform. But the Communists have no monopoly on democracy. Chiang Kai-shek and the government and the Kuomintang also want these fine things. The Communists and other opposition parties were accorded legal existence. Censorship was already abolished in Free China and practically nonoperative in the hitherto occupied area. In Chungking one of Chiang Kai-shek's former political prisoners, a left-wing professor who became a minor cause célèbre, boasted of his lecture audiences and press clippings. Chiang's cabinet, however grave its faults, made up of rich and poor, socialist and conservative, was and is the most liberal and honest in recent Chinese history. And the government, if the Communists had not asked for a postponement, last month would have called the long-promised constitutional convention to end the "political tutelage" (one-party Kuomintang government) and institute representative government. "The highest ideal of the national revolution," the Generalissimo cried on VJ-day, "is the participation of all people in national politics."

The real issues had nothing to do with the abstractions of democracy. As the price of participating in the government the Communists demanded absolute political control of five provinces north of the Yellow River (Shantung, Jehol, Hopeh, Chahar, Shansi) in addition to their so-called border regions of Shensi, Kansu, and Ninghsia, and the vice chairmanship in six others (Suiyuan, Honan, Anhwei, Hopeh, Kwangsi, and Kwangtung). This added up to working control of inner Mongolia and all north China north of the Yellow River, a strong minority position in the populous provinces between the Yellow River and the Yangtze. Moreover, they would be astride all the land approaches to Manchuria, in the government of which they demanded representation. On the military side, the Communists wanted the government to recognize an army of 48 divisions—nearly half the number which the government had earlier fixed as optimum for China's postwar force.

In 6 weeks of bargaining the government negotiators succeeded in cutting down the political demands by only one provincial governorship (Shansi) and six vice chairmanships (all south of the Yellow River), and the army demands by about half. The government was prepared to yield Mao Tze-tung three or four provincial chairmanships—but not in contiguous provinces—and with the proviso that the Communist choice would be a worthy and popularly elected administrator. It was further prepared to leave him with 20 divisions, but insisted these could not remain the standing army of the Communist provinces but must eventually enter the national forces. "To have done anything else," said Governor Chiang Chun, "would have meant setting up a special region in north China. This we could never accept. It would just be another kind of warlordism."

The Communists say that for them to give up their armies in advance of constitutional reform would be to invite annihilation by Kuomintang reactionaries. Hence, their intransigence can be partly explained by fear. But a power urge—no weaker certainly than they attribute to Chiang Kai-shek—would seem to underlie their granitic insistence upon political hegemony in north China apart from an adequate popular test. Plainly the major issues raised by the Yenan Communists have little to do with communism as political theory. And if they mean what they say about unification by any standards of political reasonableness they are fundamentally wrong when they insist upon a separate army. That can only lead not to one China but two—antagonistic in philosophy.

THE RACE FOR WEAPONS

Perhaps on this account the Chungking negotiations were doomed to fail. An air of unreality pervaded them from the start. Mao Tze-tung boasted of an army of 1,200,000 men and 2,200,000 militia; by Yenan's claim, the regions which its armies had liberated contained more than half of China's 400,000,000 people. Yenan claimed all north China, and in the Yangtze Valley its new Fourth Army was supposed to have the cities of Shanghai and Nanking surrounded.

But all the while the argument went on over control of China, it was plain to everyone that neither Government nor Yenan was in physical possession of the really important parts. The war's sudden end found the Government armies chiefly crammed in the west and south, ready to spring for the south China coast. The Communists, although spread over north China from the Yellow River bend to the sea, were actually diffused over the countryside. The Japanese had all the cities, ports, and railroads (which were then running); they had the Yellow and Yangtze River Valleys. And the Russians were in Manchuria.

With the Japanese control theoretically eliminated, a race developed for physical possession of these regions in advance of the final show-down. Another prize was also at stake—the weapons of the Japanese Army. The Japanese had about 1,100,000 troops in China—many more than was realized. They had, in addition to rifles, huge stocks of heavy machine guns, fieldpieces, trucks, signal equipment. These weapons were not indispensable to the Nationalist armies, 39 of whose divisions had been equipped or were being equipped with United States arms. What the Government mortally feared was that the Communists, who immediately demanded they be allowed to disarm the Japanese in north China, would reach them first.

Two moves were made by the Chinese Government, or on its behalf, to head off the Communists. General MacArthur in Tokyo ordered the Japanese to surrender only to Chiang Kai-shek's army. Then Gen. Ho Ying-chin warned Japanese commanders they would be held responsible for law and order in the regions in which they were garrisoned and for keeping the railroads open until the Government forces arrived. In other words, the Japanese were to hold on to the title deeds of occupied China until Government troops arrived.

Naturally, this arrangement was repugnant to Chiang Kai-shek and, with the idea of ending it as soon as possible, he asked the United States to help move his armies. Sometimes the Chinese demands seem crazy but that may be because these people think nothing is impossible for Americans. Chiang Kai-shek asked Wedemeyer to move 85 armies (about 3,000,000 men) by air. The American air staff, when it recovered from the shock, pared the number to four (about 92,000 men) and promised to complete the job by November 15. And the Navy, in addition to putting down the marines in north China, agreed to pick up several armies on the south China coast and move them by sea around the Communists to Manchuria and the Shantung Peninsula.

General Ho Ying-chin used the American air lift to pass four crack American-equipped and American-trained armies over the heads of the Communists into Shanghai, Nanking, Peiping, and Tientsin. He got them into all these cities without a fight. The much-advertised battle for the Yangtze never materialized.

DEVELOPMENT IN THE NORTH

Meanwhile, without American help, General Ho has pushed other armies, by rail and on foot, into the north. Their parallel movements he likens to the teeth of a comb. Four armies under General Sun Lien Tsung, following the Pinghan Railroad (Peiping-Hankow), have crossed the Yellow River and are within 200 miles of Peiping. There, for the present, they are stalled, partly by 100,000 Communists or so barring the way, and by most of the railroad track ahead being destroyed. To the east, along the Tsingpu (Tientsin-Pukow) Railroad, two more armies have pushed into Tsinan, capital of Shantung, and a third army, still farther to the east, has reached T'eng Hsian, in the same province. Compared to the United States sponsored divisions, these are all second-rate troops, but so far, considering the state of the railroads, they have done pretty well.

* * * * *

So far, despite their head start, the Communists have not achieved any notable successes in Shantung except to occupy Chefoo after the Japanese garrison departed and to rip up the railroad tracks. But the Japanese must be given credit for saving the province for the Central Government. So long as they were along the railroads and in Tsinan and Tsingtao, the Communists kept their distance, giving the government armies time to slip in.

* * * * *

North of the Great Wall the situation developed with the alarming twists and turns of an E. Phillips Oppenheim novel, and for a few anxious weeks Ho Ying-chin was afraid of losing not only Manchuria but two armies to boot.

Originally Chiang Kai-shek expected no trouble with the Russians in Manchuria. At the signing of the Sino-Russian pact in August, Stalin agreed to evacuate his army within 3 months after the Japanese surrender. There was no question then of the Chinese Communists getting in first, for none ever managed to crack the Japanese cordon.

The first unfriendly sign was noted in October when the Russians curtly refused to let government troops land at Dairen, whence a fine railroad runs to Mukden. Chiang Kai-shek decided not to make an issue of the rejection. With the Russians offering no objection, he made arrangements to go ashore instead at the smaller ports of Yingkow and Hulutao. But on arrival at Hulutao the transports were greeted by small-arms fire. The Red army, giving no notice, had departed and Chinese Communists held the port.

* * * * *

THE RACE FOR MANCHURIA

Denied Manchurian ports, the Thirteenth and Fifty-second Chinese armies put into Chinwangtao at the end of the Great Wall, brushed aside negligible Communist resistance and started up the coastal railroad to Mukden, 250 miles away. The withdrawal plan called for the Red army to be out of all Manchuria south of Harbin by November 25 and the rest by December 1. And from the first fear that the Russians might not want to leave Manchuria, the Chinese high command became alarmed they would leave too soon, allowing the Communists to slip in behind.

"If this business is to be done properly," a Chinese general complained, "the Russians must wait for us to catch up. I cannot imagine their being oblivious to the significance of their action."

With less than 70,000 men on the Mukden Road, Chiang Kai-shek took the only steps that would give him Manchuria without battle: He appealed first to his American friends and to Russia. From Wedemeyer he asked an extra air lift for another army as far as Changchun—a request which Wedemeyer had to refuse, his authority ending at the Great Wall. The Chinese asked for lend-lease air transports with volunteer American pilots—a transport version of AVG. While Washington was mulling over this proposal, Chiang Kai-shek took the only alternative left. He asked Stalin to hold the Red army in Manchuria a little longer. Stalin obliged—at a price, judging by Chungking rumors. The new withdrawal date is January 3.

If the situation below the Great Wall is weird, how much weirder is the one above, with the Russians holding the title deeds to Manchuria against their ideological cousins.

Many strategists think that Chiang Kai-shek has bitten off more than he can chew. It is argued that instead of trying to take north China and Manchuria simultaneously he should have been content with north China, moving up along the two railroads, clearing the country as he went, fastening his grip on Peiping and Tientsin, and gradually introducing the long-promised economic and political reforms.

Wedemeyer and McClure spoke up for the conservative approach, even at the expense of the temporary loss of Manchuria. But the Generealissimo, after weighing the alternatives, decided to try for both and his reasons, as paraphrased by one of his aides, went like this: "Militarily, it is dangerous to go into Manchuria. We may lose our two armies. Politically, we have no choice. Manchuria is part of China—and the restoration of our territorial integrity is one of our fundamental war aims. Not to attempt to take it back would be an admission of incompetence."

Moreover, the Government sees a special danger in Manchuria. A General Staff officer speculated, "Today the Communists are armed chiefly with rifles. They do not have many heavy machine guns. But Manchuria contains tremendous stocks of weapons, as well as one of the world's finest arsenals. Suppose the Communists should squeeze half a million men across the Great Wall. Suppose they should recruit half a million puppets. A million armed men, a first-class arsenal—it is something to think about."

The eventual outcome of the struggle for control of China is still in the balance, but the stakes the Chinese Communists are playing for are discernible. It is to build a military base around the Japanese-created heavy industry in Manchuria; to make a thick political and economic buffer out of North China; to keep the region between the Yellow River and the Yangtze as a friction area. "It is very simple," says General Hsiao Yu-shu, General Ho's chief of staff. "A castle, a wall, and a moat."

Chinese intelligence, admittedly scanty, places the present Communist strength, counting nonideological partisans, at about 600,000 men, collected in half a dozen big pockets; between 300,000 to 400,000 are armed with rifles of one kind or another. Since the Japanese surrender they appear to have collected between 50,000 and 150,000 rifles, as well as 30 or 40 Japanese field pieces, which were first put to use, to Chiang Kai-shek's alarm, in the little battle for the Suiyuan corridors. According to marine intelligence, they have also enlisted several thousand Japanese troops.

THE COMMUNISTS AND THE FUTURE

But over the long pull and in the absence of direct help from Russia, the Communist position is hopeless. The government has the prestige; it has the more experienced commanders, the better troops; its United States equipped divisions carry much more firepower than the Communists' best, and, of course, it has plenty of bombers and strafers which, in deference to American opinion, it has not used. On the military scoreboard the Communist armies have fallen far short of their advance billing. Despite their claims of having carried 69 percent of the weight of the Japanese Army during the war, they do not appear to have been any more than a nuisance, though a constant and nagging one, especially along the north China railroads, to the Japanese. (Okamura says total Japanese casualties in 7 years' skirmishing with Communist bands were only 25,000 killed and wounded.) In the so-called "civil war" their lack of military success so far seems almost queer. It is the same on the political side. The much-publicized underground armies in the cities are as yet inert; no deep people's note of defiance has sounded from the myriad villages in the Peiping plain although there are plenty of Communist soldiers around. The fact has somehow been overlooked that north China is not natively communistic; nor are the Communists natively north Chinese. In the last decade they have wandered all around the periphery of China—first the southeast, then the southwest and northwest to Yenan. Now once again they are folding their tents and moving into Inner Mongolia, another fortress.

This much seems clear: if we stop helping the government and if the Russians cut off Yenan, the government in time will finish the Communists, although the war would be futile and desultory. If we help the government over the crest and if the Russians meanwhile can be assured we seek no special advantage inside China, then the Communists will have to be reasonable or face a quick end.

Why assume we must clash with Russia over China and/or Manchuria? In this situation the Kremlin seems ready to do business with Chiang Kai-shek. It did so last summer, when T. V. Soong went to Moscow, and again last week over Manchuria. The logic favors the assumption that Russia desires peace in Asia—a peace impossible without a unified China. And it is quite possible that the Russians all along have been expecting us to do more; that the flurry over Manchuria was a hedging operation. And if meanwhile the international left-wingers keep after Chiang Kai-shek's head, the apparent inconsistency may only be a bargaining technique. The Yenan statesmen, with their talk of a 10-year war, of not needing or ever having any outside help, would seem to be discounting that possibility.

In the end, of course, if China is ever to be a great nation in a substantive sense, the Chinese must resolve this question of national unity among themselves, preferably without further violence. There is plenty of room for self-improvement. All China pulses with a pent-up desire for reform that neither the Kuomintang nor the Communists alone can satisfy.

American apologists of the Chinese Communists have painted a picture of a prosperous, happy agrarian democracy under popular Communist auspices based on popular government spreading through the Chinese villages. It is no longer possible to accept these pictures as wholly authentic. Instead, as the Communists make ready for battle, come tales of the wholesale killing of village elders, the ruthless impressment of young men, an apparently calculated program to rend the centuries-old fabric of the Chinese social life as constructed around the village and the family. They seem to have abandoned their interim war policy of a slow, deliberate communizing village by village. In destroying and blockading the railroads they have inhibited the paths of China's reconstruction; a terrible economic problem has been made nearly insoluble. Even so sympathetic a journalist as Mr. Tillman Durdin of the New York Times left the Communist region around Kalgan with an uncomfortable memory of scared, silent people and confident commissars.

But whatever happens to the Communists—whether they eventually enter the democratic state supposedly desired by all Chinese or whether by one of those peculiar accommodations common to Chinese politics they are allowed to persist as a splinter state—their impress will remain on Chinese life. As no other party has done, not even the Kuomintang of Dr. Sun Yat-sen's great hour, they have awakened the political consciousness of the Chinese peasant; in many parts of China they have broken the crushing grip of the rapacious landlord and the tax collector. At their best, the Communists introduced a genuine democracy into the bottom of Chinese life—the bottom where the hundreds of millions are. And the very fact of their survival, beginning with their epic retreat from Kiangsi and Kwangtung to Yenan, attests the strength of their human, if not their doctrinal, roots.

But the flaw in the Yenan case as regards democracy is the flaw in the Communist case everywhere; the Chinese Communists decline to submit to the first condition of representative government: the risk of a possibly disadvantageous majority. To be sure, the same charge has and can be made against Chiang Kai-shek. He, too, has postponed many, perhaps too many, elections. He, too, is on trial, not only in China but before the world. The fact that he has started down the path of reform leaves the Communists unmoved. They say he is too late with too little; too fearful of disturbing the ancient restraints of Chinese life. A wise old revolutionary who marched under Dr. Sun Yat-sen says: "Ah, but that is not the weakness of Chiang Kai-shek alone. It is the weakness of China." The point is that Chiang Kai-shek is prepared to put his Government to the trial of popular elections. And although Chinese politics extends over extremes as wide as those found in other countries, only the Communists refuse to take him at his word.

## Statement on the General Housing Bill By Ferd Kramer

EXTENSION OF REMARKS

OF

## HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. MITCHELL. Mr. President, on behalf of the senior Senator from New

York [Mr. WAGNER], I ask unanimous consent to have printed in the Appendix of the RECORD a very informative statement on the general housing bill, S. 1592, which was presented by Mr. Ferd Kramer before the Senate Banking and Currency Committee on December 6, 1945. Mr. Kramer is president of the Metropolitan Housing Council, of Chicago, and a past president of the Chicago Mortgage Bankers Association. His views are based on many years of experience with housing problems, and I urge Senators to give his statement careful consideration and study.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is Ferd Kramer. I am in the real estate and mortgage banking business in Chicago. I am a past president of the Chicago Mortgage Bankers Association, and am now president of the Metropolitan Housing Council. The Housing Council is a citizens' group interested in all phases of housing and city planning in the Chicago area. It is a broadly representative body, including builders, labor, realtors, industrialists, mortgage bankers, sociologists, architects, and educators. I am here representing that organization.

Before discussing specific titles of the proposed General Housing Act, I would like to emphasize the extreme urgency of the early passage of a national housing bill. We are on the threshold of one of the greatest building booms in history. Without a bill like Senate bill 1592, that building will take place largely on the outskirts of our cities; the slum areas will be enlarged; and our cities, already rotten at the core, will face bankruptcy from ever increasing loss of taxpayers and tax values to the suburbs. The bill we are discussing will give cities the means to arrest that flight and plan and build stable communities.

It is true that at the present time, the shortages of labor and materials have been curtailing construction, but the great productive capacity of our country and the reservoir of manpower which the war's end is rapidly making available, will change this picture in a year's time. There is, therefore, no time to be lost in encouraging cities to acquire and clear their blighted areas to make them ready for redevelopment by private enterprise and by local housing authorities.

To take up the specific provisions of the bill, I should like to say that title I, which makes permanent the coordination of all Government housing activities is excellent as far as it goes. It would be a serious step backward to return to the time when 16 or 17 Government agencies dealt with housing without reference to each other. However, I would like to see the bill give more power to the Administrator. During the early days of war housing, when I was a part of the Division of Defense Housing Coordination, we learned that the power to coordinate was virtually no power at all. The bill charges the Administrator with the responsibility of an over-all policy. However, we have all seen that it is the action of the particular department involved that creates the policy, and that, therefore, policy control without direct administrative control may be futile. I should like to illustrate this point. The general policy of the Government is to hold the line against inflation. The Federal Housing Administration, one of the constituent agencies of the NHA, has been valiantly adhering to this policy. Their national appraisal system is doing its part in holding in check the wild inflation that is now going on in real estate. In contrast to the policy of the FHA, however, another constituent agency of the NHA, namely, the Federal home-loan bank, is following a different course. Although they insure the deposits of many savings and loan associations through the Federal Savings and Loan Insurance Corporation, they are standing by while these savings and loan associations make their loans based on appraisals which are following market prices in many cases. Thus, you have two arms of the same agency following diametrically opposed policies. In other words, although the policy is to hold the line, the action of at least one of these agencies is not in accordance with this policy. If an administrator doesn't have the right to hire and fire, as well as budgetary controls, his operation can be largely thwarted. It seems to me that governmental agencies should be run along sound administrative lines just as is an efficient private corporation. It would be unheard of in a private corporation to have heads of different departments off on their own without any control from the head of that corporation.

Housing is coming of age. It is our second largest industry. The entire economic welfare of our country hinges on its smooth operation. I would like to see the Administrator of the National Housing Agency a position of Cabinet rank as is the Secretary of Agriculture, the only industry that is larger. I, therefore, urge that in the interests of efficient governmental operation and in recognition of the importance of housing that title I be strengthened.

I am heartily in favor of the provisions in title II. Research by the Housing Administrator to reduce housing costs will be of the greatest service both to the housing industry and the people who need houses. Aid to local communities for market analyses should again help both private industry and the public. We can still remember the situation in the twenties when cities were far overbuilt with dwellings for the upper-income brackets and private investors lost millions of dollars. With an accurate knowledge of the market, the builder will know where the demand is and gage his operations accordingly. It is self-evident that this information would be of incalculable value to mortgage bankers.

It seems to me that titles VI and VII offer the greatest contributions in this bill. These are "musts." There are people who oppose this bill on the allegation that it is a public housing bill. On the contrary, title VI gives private enterprise the greatest if not the first opportunity it has ever had to rebuild our decayed communities. I know from my own experience in Chicago real estate that the minimum cost of buying and clearing slum land is $42,000 an acre. I know of one project which cost well over $100,000 an acre; and yet, most builders figure they cannot afford to pay more than $10,000 to $20,000 an acre and still rent homes even as low as $15 to $18 a room per month. I am very much in favor of the assistance provided in title VI which will put thousands of acres of favorably located land on the market to be sold or leased to private interests at prices they can afford to pay.

Even with the kind of help provided in title VI, private enterprise cannot at the present time, build for those whose incomes are under $1,800 a year. Therefore, in my opinion, title VII providing aid for low-rent public housing, is most necessary. I am convinced that public housing does not compete with private enterprise. In my business, we have financed more than a thousand war houses. None of these houses could be built for less than $6,000. I have checked the credit reports of those who rented or purchased these houses. None of them had earnings of less than $2,300 a year. Again in the rental field, private enterprise cannot touch the $6 to $7 a room per month rentals which public housing can offer. When our cities are rebuilt, some of the land must be devoted to this type of housing and I am satisfied that the returns will be well worth the public expenditure both in human and property values.

It seems to me that the authors of this bill, in their desire to avoid having the bill considered just another public-housing measure, went too far in their efforts to weight it with aids to private enterprise. In my opinion, some of these so-called aids are unsound and highly inflationary.

To be specific—title IV, which provides for 95-percent loans is unnecessary. I think it is a mistake to liberalize financing at a time when both mortgage and equity money are available in the greatest amounts ever known in our history. The problem is not one of the availability of capital or the interest rate. During the last 10 years, the cost of money has declined 40 percent. The problem is rather one of the scarcity of labor, material, and excessive and uncertain construction costs. The Housing Administrator, with additional power and the ability to carry on research provided in this bill, can do much to solve this problem.

Another attempt to conciliate private enterprise which will be highly dangerous and an inflationary measure, is paragraph IV (b) of title III. This title would permit savings and loan associations to lend up to 15 percent of their assets on mortgages, without regard to type, location, or amount. If many of the savings and loan associations took advantage of this clause, the total amount of unsound loans being made would be large enough in total volume to become extremely unhealthy, and might force other unthinking lenders to reach for these loans in order to stay in business. This, of course, would be a powerful stimulus to the inflationary spiral. It would mean unsound loans and more foreclosures. We would soon have to be bailed out by another gigantic home owners' loan operation such as we had in the thirties. I think this is a dangerous further loosening of the already too loose controls of savings and loan associations whose deposits, after all let us remember, are insured by the Government.

I have confined my comments only to those portions of the bill which lie in my special field of competence and immediate interest. But, do not think that these criticisms indicate disapproval of this bill. I think it is a great step forward for this country, and I hope it will be passed without delay. It takes a long time to condemn, clear, and prepare land for rebuilding. I believe it has been 2 or 3 years since the first redevelopment bills were presented to the Senate. We have already lost much valuable time. I urge that housing be recognized as the industry of paramount importance, that it is by strengthening title I; that the unsound parts of titles III and IV be changed, and then that the bill be passed as quickly as possible. The time for talking about slum clearance is past—for the sake of the millions of people in this country who need homes and the tens of millions who will want jobs, the time to start is now.

---

## Controlled Atoms or Controlled Lives

EXTENSION OF REMARKS

OF

### HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Controlled Atoms or Controlled Lives," by James H. McGraw, Jr., presi-

dent of the McGraw-Hill Publishing Co., of New York.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTROLLED ATOMS OR CONTROLLED LIVES

Since August 6 when the first atomic bomb was released over Hiroshima, the American people have been subjected to a continuous barrage of pronouncements on the use and control of atomic energy. Some of this comment has been strident, and much of it conflicting. A considerable portion of it has been of sincere and constructive excellence.

It has not been easy to separate the wise counsel from the merely noisy, and it is small wonder that the minds of many are troubled and confused.

However, the sheer mass of discussion poured into press and microphone has awakened us all to the gravity of the issue. In terms of any problem on which Americans ever have been called to exercise a judgment—This is it.

Even the dullest now recognizes that atomic weapons hang over modern civilization like the sword of Damocles, and understands in some measure how fragile and taut is the hair of political balance that holds it suspended.

From this point on, we need the coolest and most carefully considered judgment that can be brought to bear. Discussion highly charged with emotionalism will but increase the tensions both at home and abroad, and render wholly insoluble a delicately intricate problem.

WHAT IS THE PROBLEM?

The major outlines of that problem now are coming into focus in understandable terms:

1. The scientists have opened up a new and virtually unlimited storehouse of energy, and the engineers have discovered how to turn it into a military explosive incomparably more powerful than any we have known. We know that this energy may also be used to produce heat for useful power, and we suspect that the radio-active substances produced by the process in hitherto unimagined quantity may also have medical, industrial, and other constructive applications.

2. Terrifying as have been the demonstrations of the atomic bomb thus far, we know that they are as nothing in comparison with its potential destructiveness. The explosive force of individual bombs can be increased tremendously, and means for their effective delivery to predetermined targets in wholesale quantity already are at hand. The experts tell us that no practical means of interception can be devised, and that reprisal in kind probably will be the only answer to an enemy attack with atomic weapons.

3. So far as we can see now, even successful retaliation would be at best an answer of hollow effect. Any two nations each having wholesale stock piles of bombs could accomplish the practical destruction of each other. Since a first treacherous blow might well constitute an enormous advantage, a nation actuated by a ruthless urge to conquest or revenge might have the best chance of survival. But since the widest possible dispersal of bombs and launching units would be dictated by the strategy of atomic weapons, it is doubtful that one nation could destroy another without itself suffering destruction. On both sides the major centers of population could be wiped out, and the nation of least concentrated industrialization and commerce would suffer least. However, no one can be sure that the concentrated explosion of as many as 20,000 atomic bombs would not poison the atmosphere of the world to an extent that would be fatal to great masses of population, not only within the country bombarded, but perhaps in the country which launched them.

4. The problem is further complicated because, so far as we know now, any large-scale commercial use of atomic energy as a power source is more or less inextricably linked to a potential military use. It is true that, if atomic power becomes economically feasible (which is by no means certain for a long time to come), it would require only low-grade concentrates of fissionable material, which would need further elaborate and costly processing before reaching explosive potential. But the process of producing such low-grade concentrates constitutes perhaps two-thirds of the industrial effort required to make effective bombs. It follows, then, that if nations were to equip themselves to produce large quantities of low-grade concentrates for power generation, the effort required to develop large-scale bomb production would be materially reduced. Moreover, the maintenance of an effective inspection to police agreements not to produce bombs might be forbiddingly difficult if atomic power generation were allowed.

5. In addition to the major problem posed by the use of atomic bombs in international war, any nation which produces or possesses such bombs, or the fissionable materials with which they are loaded, faces still another in the danger of their falling under the control of paranoid elements in its own population.

WHAT ARE WE GOING TO DO ABOUT IT?

We face the hard fact that we have produced a weapon capable of destroying whole nations—perhaps even the whole world. Although we were importantly aided in its development by the nationals of other countries, we, together with Great Britain and Canada, now must take the initiative in deciding what shall be done with it. We have only two choices. We can try to keep this weapon as a monopoly of our own, or we can try to place it under broad international control.

CAN WE KEEP IT TO OURSELVES?

If we know one certain fact about the atomic bomb, it is that it cannot long be held as a monopoly of those nations which produced it.

If Nazi Germany had succeeded in developing the weapon first, it probably would have attempted to achieve world dominion, with utter destruction as an alternative. Such a course is not within our range of choice. It violates every principle for which we stand.

Much reckless nonsense has been uttered concerning the inability of other nations to master the scientific, engineering, and industrial problems involved. It is the virtually unanimous opinion of those who worked on the project that several nations today are fully equipped in science, engineering, and industrial organization to produce atomic bombs and to provide the means for launching them. At least one of these nations, Russia, has also access to an ample supply of the necessary raw materials. The only debate is over whether it would take 3 or 5 or 10 years for her to marshal her resources to produce bombs in multiple thousands. Once such an atomic race were on, we have no reason to believe that Russia might not divert more resources to the task than we ourselves should be willing to put into it.

Additional nonsense is talked as to how we might attempt to cope with the problem of living in a world in which mutually suspicious or hostile nations faced each other, with stores of atomic weapons on both sides. We hear talk of dispersing our cities and even of moving underground. No one has seriously reckoned the difficulty or the cost of following such counsel of despair Still less has anyone appraised the neurotic effect upon men's minds of living by any such preposterous formula, under continuously mounting tension day after day, and year after year.

Certainly, if we could find no way to prevent the competitive production of atomic weapons, we should be driven at least to the selective dispersion of our bomb-launching facilities, of certain key industrial establishments, and of our centers of government and governing personnel. We should be forced, also, to change our traditional requirement that only Congress can commit us to active war. We should be forced to organize ourselves as a police or military state, with our scientists regimented and muzzled, with all of us under constant surveillance against the smuggling and planting of time bombs, and constantly alerted against attack through the air.

Before we commit ourselves to any such intolerable procedure, we should be mad not to explore all possible means for making it unnecessary.

THE ONLY FEASIBLE ALTERNATIVE IS EFFECTIVE INTERNATIONAL CONTROL

This cardinal principle has been recognized in the statement of November 15, issued jointly by President Truman and Prime Ministers Attlee and King. Their statement frankly concedes that against atomic weapons there can be no adequate military defense, that no nation can command a monopoly of such weapons, that responsibility for eliminating atomic energy as an instrument of war and for devising safeguards over its use for the advancement of science and other peaceful and humanitarian ends rests upon the civilized nations of the world.

They propose that a commission be set up at once under the United Nations Organization to make recommendations: (a) for extending between all nations the exchange of basic scientific information for peaceful ends, (b) for control of atomic energy to the extent necessary to insure its use only for peaceful purposes, (c) for the elimination from national armaments of atomic weapons and of all other major weapons adaptable to mass destruction, and (d) for effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions.

Already criticism is leveled at the wording of the statement, at alleged omissions, at the wisdom of choosing the United Nations Organization as the medium through which to seek agreement in view of the weaknesses of the UNO Charter.

None of these issues should be crucially important. What matters is that an invitation has been issued in good faith for the nations of the world to meet and decide upon means for assuring the elimination of weapons, the existence of which no one can afford to tolerate.

The decision cannot be other than international; it will require the best thought of the best brains the world can muster. The smaller nations have an equal stake with the large, and from them may well come the most fruitful suggestions. But Russia now holds the key to the success or failure of our proposal. If she accepts our invitation, no other nation will refuse.

Alternatively, there will be an international armament race paced by atomic weapons. It will mean an end of free science, a severe policing and regimentation of international travel and trade, and innumerable restrictions upon those individual freedoms which we have just fought so desperately to preserve. This is the dismal prospect if we fail to arrive at a genuinely international accord on the control of atomic energy. But even this interval would promise to last only for an uneasy period, until someone started pressing the push buttons on the panelboards of extinction.

The only permanent solution lies in finding means to eliminate war itself. That we cannot hope to achieve overnight, but we can, and do hope that the nations will now agree to eliminate atomic weapons and their radio-active byproducts as instruments of war.

If they do that, we can move forward more surely to the constructive development of

the incalculably valuable resources that science has newly opened to our use. And we can hope also for a progressive improvement in international understanding.

Unless the nations can reach agreement on this paramount issue of atomic energy, it is difficult to conceive of any vital issue on which they might agree.

## Ten Million Silver Dollars

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. WHITE. Mr. Speaker, I am transmitting for the consideration of my colleagues a letter from John E. Kelly, consulting mining engineer of Pittsfield, Mass., and an article by Donovan C. Brownfield, of Rialto, Calif., which was published in the California Mining Journal of December 1945, advocating the coinage of 10,000,000 silver dollars to commemorate the victorious conclusion of World War II and 10,000,000 50-cent pieces to commemorate Pearl Harbor. This seems to me a most excellent and timely suggestion, since they will neither tarnish nor lose value with the years, and their coinage will represent an important profit to the Government.

PITTSFIELD, MASS., *December 16, 1945.*
Hon. COMPTON I. WHITE,
*Chairman, Committee on Coinage, Weights and Measures, House of Representatives, Washington, D. C.*

DEAR CONGRESSMAN WHITE: I enclose herewith a page from the December 1945 issue of the California Mining Journal, and if you have not already seen it, beg to call to your attention the suggestion of Mr. Donovan C. Brownfield that silver coins in the denominations of $1 and 50 cents, respectively, be struck to commemorate the victorious conclusion of the war.

This seems to me a most excellent and timely suggestion. It is a patriotic gesture to which there can hardly be objection, and will provide a memento that will neither tarnish nor lose value with the years. The coinage in itself will represent an important profit to the Government and a further incentive will be, as Mr. Brownfield points out, that the coins will remain in the hands of the public, yet not in circulation, so that they will not prevent the issuance and use of the ordinary dollar and fractional silver pieces.

Hardly a month passes without the issue of commemorative postage stamps, while it is several years, since Mr. SOMERS was chairman of your committee, that a commemorative coin has been struck.

Trusting that you will find the suggestion of merit, I am

Sincerely yours,

JOHN E. KELLY.

VICTORY COIN TO AID SILVER MINES

Total victory has been won. We are now entering the war against want. We are pledged to full employment and preservation of the free enterprise system. In this new war mining should play as vital a role as in the bloody struggle just concluded. Given a fair price and a large demand for metals, our mines can be operated at capacity. This will bring back the prospector, it will give employment to thousands, and will result in the development of much of the West which now is desert wasteland. This is true free enterprise. It is the type of enterprise which fires the imagination and plants the seed of determination within men. This is the spirit which has built our country and which will continue to improve it.

STABLE MARKET ESSENTIAL

For profitable operation most of our western mines depend upon silver and gold to supply an operating profit. This is not only true of our strictly gold and silver mines, it is also true of our copper, lead, zinc, and other mines as in most of these there is a by-product of gold or silver which in many cases spells the difference between loss and profit. Therefore it seems that, if the public is to have cheap base metals, that an unlimited market at a fair and stable price must be established for gold and silver.

At present most, if not all, of our marginal mines are operating solely because of the premiums which are now being paid for production of such metals by our Government. In other words, they survive only because of a Government subsidy. If this subsidy should be removed, they must shut down, and in doing so create further unemployment.

PRICE, SUPPLY, AND DEMAND

Gold is an international medium of exchange having a fixed price of approximately $35 an ounce. Silver is a commodity whose price in the world market is dependent upon the law of supply and demand. At present our Government is paying approximately 71 cents an ounce for it which is considerably above world price, but this could be changed or reduced at any time. Therefore, as silver is a commodity we must create a demand for it if we are to keep the price high enough to permit profitable operation of our western mines.

To me, it seems that anything which will increase the demand for silver should be given consideration and for that reason I am making the suggestion which seems would create a demand for millions of ounces of our silver at no cost to the taxpayer.

SURPLUS SILVER INTO COINS

In 1928 our Government coined 10,000 silver half dollars which are known as the Hawaiian Commemorative half dollar. At present these coins command a price from collectors ranging from $20 to $30 each. In 1892-93 our Government coined a total of 2,500,000 half dollars which were known as the Columbian half dollar. While these latter being issued in greater number command only a small premium the fact that one seldom, if ever finds one in circulation testifies to the fact that our people have a hobby of holding onto rare and unusual coins.

Certainly we have nothing greater which to commemorate than the conclusion of this war with total victory thereby making the four freedoms to which we are pledged, practical. Therefore, it seems that our Government should coin and issue for general circulation not less than 10,000,000 silver dollars commemorating total victory and referring to the four freedoms. In addition we should coin and circulate not less than 10,000,000 silver half dollars in commemoration of Pearl Harbor as it was this act which brought us into the war. If this should be done we would place in circulation approximately 12,000,000 ounces of silver which should go a long way towards taking up our surplus of that metal.

OTHER ISSUES LATER

If coinage of such a commemorative series of coins were limited to a definite number with the understanding that no others would be minted it seems probable that our people would take them eagerly as such a coin would be something to be prized in the future. In the past there have been many commemorative coins issued but all of these have been sold to the public at a premium and because of this, few other than coin collectors have purchased them. Should public interest and demand for such coins prove great the Government might later issue a series of four coins each commemorating one of the "four freedoms." Certainly there could be no better way of keeping these "four freedoms" in our minds than having them stamped upon the coins which are within our pockets or in our strong boxes.

In conclusion it seems to me that if we are to have a gold and silver base for our currency we must create a demand for metallic coins in our people. Commemorative coins should greatly aid in making our people money conscious and a people who are money conscious will not easily be led into debasing their money. With a public demand for hard money our mines should be able to do their part toward creating jobs and bring prosperity to the West.

## Benefits to Veterans Under the Amended Servicemen's Readjustment Act

EXTENSION OF REMARKS
OF
### HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. BENNETT of Missouri. Mr. Speaker, the World War Veterans' Legislation Committee, of which I have the honor to be a member, secured enactment of the Servicemen's Readjustment Act of 1944, sometimes referred to as the GI bill of rights. For the first time in history, while war was still in progress, our Government undertook to make plans for readjustment to civilian life of its millions of potential veterans. Obviously, its efforts and decisions had to be based on estimates. It was an experiment. Not all factors could be anticipated. We have just amended that law, liberalizing its provisions. Other amendments will doubtless have to be made from time to time to correct inequalities. But, by and large, it is a good piece of work and is so recognized by all students of the question. Endorsements I have received and which my committee has received for its work from all veterans' organizations and from individual veterans and their dependents convince me that this law is both effective and appreciated.

I take this opportunity to point out the manner in which we have attempted to eliminate the "bugs" which have shown up in administration of the law.

ELIGIBILITY

To be eligible for any or all of the benefits under the Servicemen's Readjustment Act the veteran must have been released from service under conditions other than dishonorable and must either have served not less than 90 days between September 6, 1940, and the end of the war, or have been discharged for a service-connected disability. Rank in service or age makes no difference.

EDUCATION

At any time within 4 years after discharge or termination of the war, which-

ever is later—provided that all such programs must be completed before 9 years after the end of the war—any eligible veteran may receive education for a period of 1 year plus the length of time he was in active service—between September 16, 1940, and the end of the war, with a maximum of 4 years.

To continue for the full period for which he is eligible the veteran must meet the standards established by the school or institution in which he enrolls.

The veteran may choose any approved school that will accept him, and the course he desires to study. He can go to school in any State, but the cost of transportation from his home to the school is his own expense.

The Federal Government pays for all books, supplies, and the customary tuition fees up to $500 per year. While in school he will be paid $65 per month, if single, $90 if married, or has dependents, for subsistence or living expenses. This is enough to help the veterans to help themselves and there is no law or regulation against taking outside, part-time work to supplement this assistance.

This opportunity is not confined to ordinary schools or colleges. He may take short, intensive, more expensive, specialized courses, the maximum tuition, however, being limited to $500. He may elect to take vocational or apprentice training, in which case part of his maintenance will come from the employer.

Many veterans, while in service, learned the value of correspondence courses. These courses can now be pursued after return to a civilian status, but in this case he does not receive subsistence allowances. The cost of any such course will be established by contract, with a maximum limit of $500.

Education may be commenced while on terminal leave, but no payment is allowed for living expenses until after the leave ends.

LOANS

A veteran may apply for loans from nearly every type of lending agency. His honorable discharge is his certificate of eligibility. Other discharges must be passed upon by the Veterans' Administration.

Property loans may be at the figure negotiated with the lending agency, with the limitation that they may not exceed the reasonable value of the property, or the appraisal of an experienced appraiser living in the community where the property is situated, employed by the Veterans' Administration.

Interest on loans is limited to 4 percent. Home loans may not run for more than 25 years, farm loans not over 40 years, and business loans are limited to 10 years.

There are conditions that property on which loans are to be made must be suitable for the purpose for which it is to be used—for a dwelling, for farming operations or for a business location. It must also be shown in connection with loans for farms or for business that there is a reasonable likelihood that the veteran will succeed in his undertaking as a farmer or as a businessman.

When the loan is finally completed the Government guarantees one-half—50 percent—of the amount loaned, with a maximum guaranty of $4,000 on real-estate loans and of $2,000 on nonreal-estate—chattel or personal property—loans. Thus a veteran is now eligible for an $8,000 loan on real estate or a $4,000 loan for business, with half of each guaranteed.

The veteran may obtain a loan for the purchase of property to be occupied as his home, or to make repairs, improvements, or alterations on a home he already owns.

The veteran may obtain a loan to purchase land, buildings, livestock, machinery, and supplies, if he anticipates engaging in farming.

The veteran who seeks to enter business may obtain a loan to buy land, buildings, supplies, tools, equipment, inventory, and stock in trade, or for the alteration of realty to be used in his business.

Many regulations by the Veteran's Administration must be changed, but no great delay is expected; and the new simplified procedure should speed up loans considerably and eliminate much red tape which has existed.

This does not mean that any veteran can go into any bank or to any lending agency and get a loan up to $8,000 merely for the asking. He goes in as any other person and makes his deal. Of course, the lending agency and the Government want some reasonable assurances of the soundness of the loan—of the ability to repay it and of the value of the security.

EMPLOYMENT

Assistance is provided in placing veterans on jobs, and in each State a veteran is on duty as placement officer in Employment Service offices to protect the interests of veterans.

UNEMPLOYMENT COMPENSATION

In the event a veteran, after complying with State law relating to registration for work, cannot obtain employment, he may receive $20 per week unemployment allowance—for not to exceed, however, 52 weeks. The period for receipt of this benefit is fixed by length of service—24 weeks for the first 90 days in service, and 4 weeks for each month of service beyond 90 days. In other words, 10 months or more of service entitles a veteran to the maximum.

Restrictions are rigid enough to discourage "gold-bricking" and prevent duplication.

If a veteran goes out as his own boss in business, a profession, or on a farm, an allowance is provided to bring his net income up to $100 per month, with a limit of 12 monthly payments. Application for this benefit must be made within 2 years after discharge or the end of the war, whichever is the later date.

GENERAL PROVISIONS

Under this act, as amended, Americans who served with our allies may receive benefits hereunder if they now live in the United States and have not applied for or received similar benefits from the Nation with whose Army service was rendered.

The Veterans' Administration is given full power to obtain space by building, purchase, or lease.

Veterans needing artificial appliances can obtain them, with training in their use, and the payment of necessary travel in connection therewith.

Section 1505 of the original act provided that in the event any payment in the nature of adjusted compensation is later authorized, benefits and payments received, including payments made by the Government on defaulted loans, under the act were to be deducted from such compensation. This section has now been repealed. However, this repeal is not to be construed as a promise or assurance that, in order to avoid inequalities, such action may not be taken by a future Congress. It probably will be. The present Congress cannot bind a future Congress.

MISCELLANEOUS

At the time the Servicemen's Readjustment Act was amended, Public Law 16, Seventy-eighth Congress, which relates solely to veterans with service-connected disabilities, was liberalized. Veterans with service-connected disabilities, to whom we owe our greatest obligation, are given training and education to help them overcome physical handicaps and enable them to become self-supporting.

Payments for these men and women while in training have been too low. These disabled veterans will now receive, in addition to all training expenses, $105 if single; $115 with a dependent—wife, child, or parent. Ten dollars per month is allowed for one child, $7 for each additional child, and an allowance of $15 for a dependent parent.

CONCLUSION

This presentation must necessarily just hit the high spots of the amended law. It does not take into consideration the vast detail relating to other veterans' legislation for which my committee has been responsible. It does not enter into any discussion of veterans priorities for housing, surplus property, and so forth, which is not under the jurisdiction of my committee. For detailed information on veterans' problems the veteran should make inquiry of one of the numerous sources available to him. He can contact his local post of the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the Regular Veterans Association, the Military Order of the Purple Heart, or some other recognized veterans' organization. He can take his problem up with the State service officer or his representatives in the various counties. Also, I have secured contact offices of the United States Veterans' Administration for the Sixth Congressional District. One of these is in the north end of the district at 521 Ohio Street, Sedalia, Mo. Another is in the south end of the district at Springfield. A third will serve the center of the district and will soon be established at Nevada. These offices are prepared to advise veterans on their numerous rights under the law. Within the next few months a subregional office of the Veterans' Administration will be established at Springfield to give even more elaborate service. The regional office of the Veterans' Administration for western Missouri is at Kansas City.

Many veterans of our various wars, and their dependents, prefer to write

their Congressman who is in Washington to serve them. These letters should be addressed to Congressman MARION T. BENNETT, 1037 House Office Building, Washington, D. C. The inquiry should contain the full name of the serviceman and his serial number. If he is discharged and now has a veteran status and a claim number established with the Veterans' Administration, the letter should contain that number so the file can be found and examined. It is not necessary to send a copy of a discharge unless requested. The wise veteran, incidentally, will have his discharge recorded and photostated. It is his passport to benefits from the Federal Treasury greater than those afforded the veterans of any other country in the history of the world. Veterans' benefits will be the largest fixed item of cost in Government for the next 50 years, exclusive of military preparations and service of the national debt. This is tough on the taxpayers, but it is part of the cost of war. America is grateful to her sons who have borne the brunt of battle and must not undertake to escape responsibility for their needs occasioned by such sacrifice.

## Swayed by Propaganda

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. HOFFMAN. Mr. Speaker, during the past few years I have been characterized as a labor baiter, cussed uphill and down by some labor leaders, labor politicians, labor racketeers, labor organizers, radio commentators, columnists, and editors, because of my advocacy of certain amendments to the National Labor Relations Act, the introduction of bills which would have protected employees not only against employers but against coercion, intimidation, and violence from professional labor organizers.

The Detroit Free Press has on occasion handed me not a little criticism, because I insisted that so-called labor legislation should be so framed as to insure employees and employers "equal justice under law." At last, at long last, the Free Press, having under its nose the latest example of the destructive effects of labor leadership, begins to see the light. When, from the floor of the House, I condemned the lawlessness and the violence practiced in the sit-down strikes, some of the Detroit papers were critical of my criticism of Gov. Frank Murphy, of the union's technique. They evidently thought the union could do no wrong.

Apparently, public sentiment has changed somewhat, for in the Detroit Free Press of December 13 there appears a cartoon showing Uncle Sam going after union leadership—irresponsible union elements with a razor strop. Uncle Sam shows on the back of his head a sizable bump and on his cheek a first-aid patch; his injuries evidently administered by union leadership.

When the Supreme Court, on the 2d day of March 1942 decided that the Federal antiracketeering law did not prevent members of the AFL Teamsters' Union stopping trucks, inquiring the drivers to pay either $8.41 or $9.42—depending upon the size of the truck—for the privilege of driving the truck over a public highway, or, if their demands were refused, administering a beating, because the law contained a proviso exempting from its provisions usual and customary union practices, 2 days later, on March 4, 1942, I offered an amendment making the members of unions subject to the provisions of the antiracketeering act in the same manner as other citizens are subject to its provisions.

Neither the Detroit Free Press nor, so far as I know, any other daily paper advocated the passage of that bill. It is gratifying, extremely gratifying, to have the Detroit Free Press now, after the House has for the third time passed the Hobbs bill, which takes many words to accomplish the same purpose as the amendment introduced by me, call attention to the unjustifiable criticism of the Hobbs bill by union leadership.

The editorial, which was printed on the same day as was the cartoon to which reference was made, reads as follows:

CONTROL

Congress showed an inclination to proceed slowly and not imperil President Truman's labor-legislation program when the House "sidetracked" a measure to fix penalties against unions which violate "no strike" contract provisions.

Even the proponents of such a measure voted against bringing it up for action at this time, in order to provide more opportunity for study of the President's proposals.

But, at the same time, the House agreed to consider the Hobbs bill which has long laid dormant in committee. This bill would subject unions to severe punishment for interfering with interstate commerce through "robbery or extortion."

The Hobbs bill has no immediate application to the current labor situation.

Its only purpose is to make more effective the present Federal antiracketeering laws, and to plug the loophole which a 1942 Supreme Court decision left open for strong-arm tactics on the part of AFL teamsters.

Yet this proposed legislation is greeted by the AFL with loud wails of anguish and a promise to do everything within its power to defeat it.

"The Hobbs bill," the AFL declared, "would prevent unions from establishing union conditions with employers in the truck-transportation industry in cities throughout the country."

All of which is obvious hogwash, and offers only another example of how labor's irresponsible attitude is hurting its own cause.

In 1942 the Supreme Court upheld a New York court's acquittal of AFL teamsters who were halting produce trucks entering New York City.

Farmers, driving their own vehicles, and carrying their own produce, were stopped outside of the city by union representatives. They were offered the choice of joining the union by paying an exorbitant initiation fee, or of paying the union for permission to take their trucks into the New York market.

Those who objected were badly beaten.

Supreme Court Justice James F. Byrnes, who wrote the majority opinion, held that this practice did not come under the antiracketeering law, and therefore the union extortioners could not be prosecuted.

But, he stated, such activities "are not beyond the reach of Federal legislative control."

In other words, he ruled that the existing law did not cover the situation, but that new legislation could do so.

That is the only purpose of the Hobbs bill.

With the American people in the mood for regulatory labor laws, William Green and his AFL cohorts would be in a better position to fight unjust legislation if they would do something about the obvious flaws in their own set-up.

It is again the old story that if those who have messes in their own yards do not clean them up, the politicians will do it for them.

And in doing so the legislative process may go far beyond simple measures which the unions, or other groups, might themselves take.

The unions make a serious mistake in their blanket opposition to all regulatory legislation.

They are going to get laws, and they may even get something similar to the no-strike penalty bill which Congress did not kill but only postponed.

How much wiser it would be for labor to get together with the reasonable elements in Congress and themselves promote just laws which would protect themselves and head off punitive legislation.

William Green, Philip Murray, and John L. Lewis blast with blind rage against any criticism of labor. They turn their guns, for example, on the Ball-Burton-Hatch bill, but offer nothing as an alternative.

Circumstances force them to do this, for no moderate man who admitted a weakness within the union ranks could long hold his job. The wild-eyed, screwball elements, which bring most of labor's grief upon its own head, would see that such men were liquidated.

It is this selfish reason alone, even if the welfare of the public counts for nothing, which should impel labor leaders to suggest something constructive under which labor can flourish and still live with legal security and public respect.

Mr. Speaker, yes, as one or two Detroit publications have sneeringly written, I come from the sticks, the southwest corner of Michigan, one of the world's garden spots, where the people own their own homes, cultivate their own land, operate their own industrial plants and businesses, and—may I add—with apologies to the Detroit Free Press—think soundly, use common sense and good judgment.

## The Republican Party and the Pearl Harbor Investigation

EXTENSION OF REMARKS
OF
### HON. WILLIAM R. THOM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. THOM. Mr. Speaker, under leave to extend my remarks, I include a review of the Pearl Harbor investigation by the well known political writer, John W. Owens, appearing in the Baltimore Sun:

CONFUSION AGAIN RULES THE GOP

(By John W. Owens)

The mystery is still a mystery. Why does the Republican Party, which long included in its ranks the larger part of the people of better education and certainly includes a very large part even today, tolerate leaders

and spokesmen who again and again muddle its affairs? The Pearl Harbor investigation is the latest example. Here was a military disaster of gravest magnitude. It occurred in Mr. Roosevelt's administration. For 4 years his opponents asked searching investigation, as they were entitled to do. After the end of the war they were accommodated. And what up to this time is the result? One can hear men who have been vehement to the point of violence, in condemnation of Mr. Roosevelt's prewar domestic policies, take the side of the Roosevelt administration as against the Republican inquisitors.

The inquiry has gone far beyond study of the causes of the fatal serenity about Pearl Harbor of our military and naval men. Apparently some of the Republicans have in their heads a belief that Mr. Roosevelt manipulated this country into the war with Japan as the consequence of secret commitments to Britain. Apparently some of them also have in their heads a belief that Mr. Roosevelt was responsible for some act which tipped the scales in Japan toward war. Probably such ideas derive by subconscious processes from the isolationism which afflicted large numbers of Republican leaders and spokesmen. They had long argued that the United States could be safe and secure if only it stayed within its own borders and "minded its own business." They had seen the United States drawn into a war costly and bloody beyond calculation. In such circumstances there is a natural human tendency to seek somebody on whom can be put blame for the failure of a dogma. In the collapse of isolationism the natural tendency of many isolationists was to seek an explanation, not in the facts of the world about them, but in the acts of Mr. Roosevelt and his diplomatic and military associates.

Now, the Republican inquisitors in this investigation have been unable, thus far, to prove that Mr. Roosevelt had secret commitment with Britain that led us into the war with Japan. They have been unable to prove that Mr. Roosevelt was responsible for an act which tipped the scales in Japan. Yet they have not known how to disentangle themselves from the beliefs that possessed them. Over and over and over, they thresh the same straw, until the universally respected counsel to the committee and his staff announce their resignations for lack of time to continue at the present pace. Indeed, the whole business threatens to become a bore.

To make the thing worse, the contrast between the Republican inquisitors and the witnesses heard up to the present can only be described as extraordinary.

Admiral Richardson hewed to the line. He stated in plain terms the causes of his disagreement with Mr. Roosevelt over prewar policy, respecting Pearl Harbor, but in equally plain terms he refused to tell the committee that Mr. Roosevelt had done wrong in relieving him. Quite the contrary. He said that, had he been in Mr. Roosevelt's place, he would have acted as did Mr. Roosevelt. Mr. Hull and Mr. Welles appeared. They had acute personal differences in the State Department. But there were no acute differences in their testimony. Both were clear and precise in testimony on the diplomacy that the administration developed before Pearl Harbor and they left with the committee the same evaluation of that policy. They gave no comfort to those who theorized on secret commitments or an overt act. Incidentally, they set forth the opposite argument to Admiral Richardson's contention to Mr. Roosevelt that the fleet should have been moved from Pearl Harbor. Taking together the testimony of Admiral Richardson and of Mr. Hull and Mr. Welles, the question as to whether the fleet should have been moved from Pearl Harbor emerged as one on which able, honest, and patriotic men could differ diametrically.

The military men appeared. Contrast with some of their inquisitors became more pronounced. General Marshall was, in his testimony, the man that this country has known well in the five dreadful years since the fall of France awakened Americans to their peril. He was the incarnation of moral integrity and moral dignity. He behaved exactly as men of unsnarled minds expected him to behave. He accepted his share of the responsibility for the disaster at Pearl Harbor. He answered questions on all points as clearly as any man could be expected to do. Yet for practically one week he was kept on the stand and, from time to time, badgered with repetitious questions, as though he were a reluctant witness in a bitter proceeding to construe a will. General Gerow, who also accepted his share of responsibility for Pearl Harbor, had an experience similar to General Marshall's though on a smaller scale.

Why cannot the Republican Party get on its feet and move in a straight course? Why cannot the intelligence that is in the rank and file of the Republican Party develop leaders and spokesmen who will know how to get on their feet and move in a straight course?

For years the leaders and spokesmen made an obsession of Mr. Roosevelt. Sometimes they surrendered to him and sometimes they stood out against him, but always he was an obsession. Long after Mr. Roosevelt had been analyzed until nothing was left to analyze, long after everybody in the country who could think at all had made his own judgment on the good and the bad in Mr. Roosevelt—long after analysis was complete, Republican leaders and spokesmen were still confining argument to Mr. Roosevelt and forgetting their duty to present the people an intellectually coherent alternative.

In the Pearl Harbor investigation, thus far, the obsession persists. And, as has happened before, old critics of the Roosevelt administration are now found among its defenders. The rank and file ought to take notice.

---

## Letter From Members of the Sixth Marine Division

EXTENSION OF REMARKS
OF
## HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. PATTERSON. Let us bring our marines home from China to prevent civil war and United States involvement in internal disputes. A group of United States marines, stationed in China, state why the United States Government should withdraw our soldiers from China:

WEAPONS COMPANY,
TWENTY-NINTH MARINES,
SIXTH MARINE DIVISION,
*Tsingtao, China, November 29, 1945.*

Honorable Mr. PATTERSON: We are members of the Sixth Marine Division and in drafting this letter we believe that we convey the feelings of a great many members of our division.

For the first time since our arrival in China we have finally read a news item which contained one ounce of truth. Up until now nothing but conflicting and apparently uninformed reports have been released. I am speaking of the resolution made by Representative HUGH DE LACY and yourself. It was met with spontaneous approval by the men who are here in China. I will now try to relate to you the facts of the run around we have been receiving since our arrival here.

We arrived here in Tsingtao, China, about October 15 under the pretense of accepting the surrender of the Japanese troops in the Shantung area. The extent of this was our attendance at the formal surrender ceremony. Not but a few days later we began to hear news reports on our radio to the effect that the marines would leave North China and that they would all be gone by December 5. Within a week we were showered with letters from our wives and families in America containing newspaper clippings which verified these reports. However, we, the marines of the Sixth Division, were in a quandary. The date was now about November 10 and here in China there was no visual indication that we were going anywhere, as a matter of fact all indications were quite contradictory. Instead of being engaged in the normal activities which would indicate an early departure we were doing just the opposite—cleaning up billets, building sheds in which to house our vehicles and guns, drawing clothing from the quartermaster, and above all starting on a new training schedule which was mainly dominated by such heretofore subjects as street fighting, riot control, and other associated subjects. Oh, yes; all this had us in quite a quandary.

On October 6 the Marine Corps headquarters issued an order which dropped our point score to 60 and then again later in October it went down to 50 points. However, the men who have the necessary points for discharge are still in China. Maybe transportation is the problem. But we do not think that that is the case. In this regard we can only offer heresay information.

The Tsingtao Harbor is crowded with ships of all kinds. Rumors galore. The commanding officer of the U. S. S. *Alaska* had offered to return to the States all high-point men but the division is said to have turned down their release. Believe me, all this had us quite perturbed.

With all this another story raised its head. The American equipped and trained Chinese Eighth Army was soon to arrive and take over the area. Sure enough they came in; disembarked from American troop ships, drive American equipment through town for 2 days and we have not seen any of them since. This took place about November 10.

But now the story has changed, both the radio and our own division newspaper, report announcements made by Under Secretary of the Navy Gates and the Secretary of State, to the effect that the marines would remain in China for some time to come, but only to repatriate the Japanese civilians and military personnel to their homeland. Up until now we have not seen any of these people or done any such duty. We have come to the conclusion that like our "December 5 departure" story, this is also something devised to pull the wool over the eyes of the American people at home.

We wholeheartedly agree with your resolution and believe we know what is actually taking place. Before long, total civil war should be raging in all of China. So far it is only our presence that has kept it away from Tsingtao. But how long will simply our presence be such a threat to the communist forces? Of course, if and when we are implicated in the actual figthing the excuse that we are only "protecting American lives and property" will be given. However, the Communist Government has repeatedly given us ample warning to leave. When the lid finally blows off our involvement will be the fault of the people in Washington who should know better.

Taking all this into consideration it is our firm belief that we should be withdrawn from China and returned home. This division has distinguished itself in battle. It deserves something more than exploitation now.

It is not only our desire to return home that actuates our feelings. We feel that it is an injustice to be drawn into the armed intervention of the affair of China. Only a portion of the people of China appreciate it

and we are quite sure that the average American is against any further hostilities which will involve American forces.

We wish you a great success with your resolution to Mr. Truman. Continuance of such appeals may cause our removal and forestall any further bloodshed of American lives.

## Underestimating Hawaii

EXTENSION OF REMARKS
OF
**HON. ROBERT HALE**
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Star-Bulletin of December 12, 1945:

UNDERESTIMATING HAWAII

In the Pearl Harbor hearings at Washington, there has repeatedly come up a reference to the desire of General Marshall in 1941 not to alarm the civilian population of the islands.

This reference pertains to his instructions to the then commanding general of the Hawaiian garrison, Lt. Gen. Walter C. Short, to take such preparations for alerting the garrison as would not unduly disturb the people of the territory.

As is now well known, the type of alert that General Short set up was an alert against sabotage—precautions against attack from within. This is in distinction to an alert against attack from without—an assault by enemy force from sea or air.

If it was assumed in the fall of 1941, that the civilians of these islands would be unduly disturbed by precautions against external attack, somebody in Washington or Hawaii sadly misread the minds and hearts and make-up of the people of Hawaii.

We of Hawaii in fact were then preparing against possible external attack. The Red Cross had set up its motor corps and established its first-aid stations. The police department had enrolled its volunteer corps of husky young men to augment its own inadequate force. The medical and nursing organizations were enlisted and training for emergency. Other civil organizations and agencies were likewise preparing.

This community, while not precisely anticipating a Japanese attack, knew that it was definitely possible.

We read the papers, listened to the radio, knew that peace negotiations in Washington were not going well, knew that Japan was on the march in Asia, and heard that Japanese warships were moving out in Asian waters.

The people were not unduly disturbed by this. They were not unduly disturbed because they were relying on the military and naval commands to take the necessary precautions and believed those precautions were being taken.

The civilians expected, and were ready, to do whatever jobs the military and naval commands called on them to do as a matter of patriotic emergency.

There was no sound reason, so far as we know, for any belief here or in Washington that alerting the Hawaiian garrison and the Pacific Fleet against possible imminent attack would have unduly disturbed the people here.

We of Hawaii are not stampeded on the nearness of danger. By 1941 we had lived with World War II long enough to be able to face serious facts soberly and calmly, even though this war, principally in Europe, seemed far distant.

When the Japanese aircraft suddenly appeared over Oahu and rained a hell of bombs and torpedoes on military and naval installations, hangars and ships and Pearl Harbor, the civil population, though shocked with horror and indignation, was neither broken nor buffaloed.

The men and women and children of Hawaii, with few exceptions, took that day of infamy with admirable courage, and turned to their emergency tasks with speed and intelligence.

We do not know on what information it was concluded here or at Washington that a full alert would have unduly disturbed the civil population of Hawaii.

We are sure that had such an alert been ordered, the civilians of Hawaii would have responded, and responded well, to whatever duties and responsibilities the orders would have laid upon them.

It appears that the people of Hawaii were strangely underestimated by someone in 1941. Even though late, the error should be corrected now.

## Legislative Program of Federated Women's Clubs

EXTENSION OF REMARKS
OF
**HON. EMILY TAFT DOUGLAS**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, the women of America are fortunate in the leadership of their largest civic organization. The resolutions adopted by the board of directors of the General Federation of Women's Clubs create an enlightened program of legislative goals. Under permission granted me to extend my remarks, I am inserting three sections of this program:

UNITED NATIONS ORGANIZATION

*Resolved*, That the board of directors of the General Federation of Women's Clubs in meeting assembled December 1, 1945, reaffirms its endorsement of full participation by the United States in the United Nations Organization and in special agencies for international cooperation in fields, including education, health, relief, and trade; and be it further

*Resolved*, That the board of directors urges prompt ratification by the United States of—

1. Constitutions of such international organizations as may be established by the United Nations.

2. Adequate financial support for all such agencies.

3. Active participation in their work.

Presented by:

MRS. LAFELL DICKINSON,
*President, General Federation of Women's Clubs.*
MRS. WILLIAM DICK SPORBORG,
*Chairman, International Relations Department.*
MRS. STEWART SCRIMSHAW,
*Chairman, Education Department.*

LIVING MEMORIALS

Whereas it is the custom of the American people to develop and provide memorials to their war veterans, living and dead; and

Whereas living memorials, such as parks, playgrounds, pools, forests, outdoor areas, recreational grounds, and community centers are all of a character to serve both the present and future generations in building character and physical fitness, so essential for the preservation of the American way of life for which our servicemen fought; and

Whereas such living memorials will serve youth, returning veterans, and others of the community, day after day and throughout the years, thus keeping alive the memory and traditions of those who served in the defense of our country: Therefore be it

*Resolved*, That the board of directors of the General Federation of Women's Clubs urges all member clubs to lend full cooperation in planning such living memorials to those who served in the present war, and that the local clubs and districts be designated to institute action in furthering the planning and developing of these living memorials; and be it further

*Resolved*, That the General Federation of Women's Clubs be empowered to take appropriate action in securing the cooperation of national, State, and local officials and groups in carrying out the intent of this resolution.

Presented by:

MRS. THURSTON ROBERTS,
*Chairman, Post-War Planning Department.*
MRS. BERTRAM P. THOMAS,
*Cochairman, Conservation of Natural Resources Committee.*
MRS. OSCAR PALMOUR,
*Cochairman, Conservation of Natural Resources Committee.*

DECEMBER 1, 1945.

PRICE CONTROL

Whereas in no war in the history of the United States has the general public been protected so successfully from runaway prices and general and serious inflation as has been the case during the war just ended; and

Whereas the United States now faces graver dangers of uncontrolled inflation than during the war or at any time in its history: Therefore

*Resolved*, That the board of directors of the General Federation of Women's Clubs supports continued Federal legislation for equitable wage ceilings and price control on basic commodities such as food, shelter, and clothing as being essential to the common good and to sustained prosperity during the period of readjustment.

Presented by:

RESOLUTIONS COMMITTEE.

DECEMBER 1, 1945.

## Effects of Prejudice

EXTENSION OF REMARKS
OF
**HON. JOSEPH R. FARRINGTON**
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by Hon. Abe Fortas, Under Secretary of the Interior, and published in the Washington Post of December 9, 1945:

EFFECTS OF PREJUDICE
A COMMUNICATION

The War Relocation Authority has announced that on November 30 the last relocation center for Japanese-Americans closed its doors. Most of the unfortunate people who were removed from the west coast

in the spring of 1942 have been relocated throughout the country. The Tule Lake Center, occupied principally by persons of Japanese ancestry who have been detained for security reasons, is still operating.

With the final liquidation of the activities of the War Relocation Authority now clearly in view, I take this occasion to express my personal thanks to the Washington Post for the leadership which it has provided in its editorial columns in the fight for decent, democratic treatment to Americans of Japanese ancestry. The Post has recognized the vital importance of this issue to the maintenance of American democracy. It is a dramatic part of the struggle for decency and individual freedom which cannot survive in a society which tolerates racial prejudice.

The consequences of racial prejudice are, of course, much greater than individual instances of gross injustice. Thoughtful people now generally recognize the debasement of character and the degeneration of civilized values which afflict a community in which racial persecution and discrimination are rampant. It is equally notable that racial fear and suspicion are apt to becloud the vision and distort the judgment.

I cannot escape the belief that one of the factors which contributed to the Pearl Harbor disaser was the groundless fear and uneasy distrust of the Japanese-Americans resident in Hawaii. You will recall that in December 1941 about 37 percent of the people of Hawaii were of Japanese ancestry. Of the Territory's total population of 423,330, about 157,905 were in this category.

The Japanese-Americans had for many years lived harmoniously with Hawaii's other Americans of many racial strains. In an imperfect world, indeed, Hawaii was about as good a model of racial living-together as one could find. Nevertheless, as tension between the United States and Japan mounted, uneasiness about the Japanese-Americans began to be felt even by people who had lived in Hawaii all of their years. And, of course, many of the continentals who were in Hawaii in those crucial days—both civilian and military—did not have to acquire suspicion and hostility toward the Japanese-Amercans. They had it when they left our west coast, and they were not examined for it as they were for other contagious diseases.

The testimony before the Boards of inquiry into the Pearl Harbor disaster indicates that this community malaise had its effect upon our responsible military officials in Hawaii. There can be no doubt that they were bothered by the presence in Hawaii of so many Americans of Japanese ancestry. I would not contest the reasonableness, in the circumstances, of additional precautions against sabotage and espionage. But the evidence indicates that the suspicion of the loyalty of the Japanese-Americans was so great as to affect profoundly the judgment of some of the influential members of the Hawaiian community and even some of our own officials.

This was an important part of the reason, I believe, why the response of the Hawaiian command to an urgent warning of danger of attack was to order not a general alert, but merely an alert against sabotage. In our moment of peril, we mobilized our available man power and concentrated our attention upon a nonexistent menace to the neglect of the terrifyingly real menace that eventually dealt our naval power in the Pacific a crippling blow. We were mobilized in an alert that faced in the wrong direction.

The irony of this is that not a single instance of actual or attempted sabotage occurred at Pearl Harbor or anywhere in Hawaii. We have no evidence whatever that it was even planned or intended. Far from constituting a menace to us in the prosecution of the war, Hawaii's Japanese-Americans were responsible for some of the most glorious chapters of our war record: for example, the heroic exploits of the famed One Hundredth Battalion.

This is not the only time that racial prejudice—the fear and distrust of a group of people because their ancestry, the color of their skin, or their religion happens to be different from that of the majority—has misdirected the energies and attention of people, with disastrous consequences. It is about time that we learned that a racial minority is not the cause of insecurity or of economic difficulties; and that an alert directed toward the supposed menace which they represent will result in turning our guns in the wrong direction. It is about time that we came to realize the power of the American idea. We are too ready to doubt and mistrust the ability of our democratic ideals and institutions to command the loyalty and unswerving adherence of people who live under our flag, regardless of national or racial origin. The American way, as has been demonstrated time and time again, has the power to capture and hold the devotion and loyalty of people who have come to live with us from every part of the globe, from every race and nation.

The Japanese-Americans, as well as the German-Americans, the Italian-Americans, and many others proved, prior to Pearl Harbor and since that time, that their assimilation to American life and their attachment to our institutions are complete and durable. People who profoundly believe in the greatness and nobility of American ideas and methods do those ideas an injustice when they ignore their power to command and hold the loyalty of all segments of our population.

When we remember Pearl Harbor, I hope that we will not forget one of its lessons: that racial fear and hostility can insidiously blind us to realities, even military realities, and can endanger our national existence.

ABE FORTAS,
*Under Secretary of the Interior.*
WASHINGTON, *December 7.*

## With Correct Government Attitude Private Industry Can Do Housing Job

EXTENSION OF REMARKS
OF
### HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the American Lumberman, of November 10, 1945:

WITH CORRECT GOVERNMENT ATTITUDE PRIVATE INDUSTRY CAN DO HOUSING JOB

The Nation's critical housing shortage presents a bright future for all segments of the private building industry and at the same time offers an interesting challenge. This could be a definite asset to efforts of industry leaders to hurdle manpower, supply and price difficulties that are presently hamstringing the private home building program were it not for the steady encroachments of OPA, public housers, and professional bureaucratic career men in the Federal Government continually crowding in with their panaceas for relief of the situation.

After almost 3 years as a commander in the United States Navy, part of which was spent in Washington, dealing with various governmental agencies, the writer is of the opinion that private industry, given its constitutional rights under the system of free enterprise, can and will do a more economical and efficient job of housing the Nation than any Government agency or group of agencies. Therefore, it would be much more businesslike and profitable for Government workers to spend our money and their efforts to help private industry get under way with home building, rather than to concentrate on evolving ways and means to control our industry and take over a large portion of the job.

While our well-paid Government workers are lobbying and conducting a high-powered national publicity campaign to discredit the job private industry has done and could do now, all on our tax money, the huge building industry lies like a sprawling giant ready and willing to arise and go to work, except that the giant is being held down by hundreds of fetters that should be removed by the very Government careerists who are instead trying to create another giant of an entirely different nature and one that will never work for the good of private industry.

We would like to point out that regardless of what sort of a program the public housers propose, it will take from 6 months to a year to get it in operation, and, taking past records as criteria, we venture the opinion it will not be efficient nor economical in operation. Give private industry 6 months' with the help, and not the hindrance, of Government and we will have enough houses built or under construction so that the pressure on the housing question would relax materially. The rising inflationary trend in values would halt and possibly start receding. Anxiety on the part of those needing new homes would be eased because with the housing industry active they would know it could be but a few months until they could get started on their own new homes. The majority of the arguments of public housers for their programs would disappear and they could either go to work for private business or stay in Government in some capacity that would conform more closely with our principles of what Government should do for business.

It is of the utmost urgency that all persons interested in the retail lumber business and building in general immediately act to convince our Government officials they should get back to their desks and start work immediately on a program to remove the problems that at present retard home building rather than continually snipe away at an industry held back because of a number of conditions that are largely within their power to remove. Private building can do the job—a bigger, better, and more economical job than any socialistic, monopolistic government program ever envisioned. We are ready and anxious to get started. Just let us get to work and we will deliver.

HERBERT A. VANCE,
*Publisher.*

## Woodrow Wilson

EXTENSION OF REMARKS
OF
### HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. LARCADE. Mr. Speaker, in the midst of a terrible global war designated as World War II, about 1 year ago today I called to the attention of the Congress the anniversary of the date of the birth of a great President, Woodrow Wilson, who was born on December 28, 1856, and being a great admirer of this World War I President, I am again reminded of the anniversary of his birth within

the next few days. Mr. Speaker, in my remarks a year ago, I called attention to the hopes and aspirations of Woodrow Wilson for world peace after World War I, and now that God has again blessed us and the world with a cessation and great and glorious victory for our Nation of World War II, I am again reminded of President Wilson and his message to Congress on January 8, 1918, when he proposed his famous "fourteen points" to us and the world, and oddly enough, I feel that it would be pertinent for the Congress and the leaders of our Nation to reread the message of President Wilson again, especially at this time, and Mr. Speaker, with your permission, I ask that President Wilson's address to Congress, of date January 8, 1918, be printed in the RECORD, as follows, to wit:

THE FOURTEEN POINTS

(President Wilson's address to Congress, January 8, 1918)

GENTLEMEN OF THE CONGRESS: * * * It will be our wish and purpose that the processes of peace, when they are begun, shall be absolutely open and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement is gone by; so is also the day of secret covenants entered into the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world. It is this happy fact, now clear to the view of every public man whose thoughts do not still linger in an age that is dead and gone, which makes it possible for every nation whose purposes are consistent with justice and the peace of the world to avow now or at any other time the objects it has in view.

We entered this war because violation of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secured once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us. The program of the world's peace, therefore, is our program; and that program, the only possible program, as we see it, is this:

I

Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.

II

Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

III

The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

IV

Adequate guaranties given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

V

A free, open-minded, and absolutely impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

VI

The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

VII

Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

VIII

All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly 50 years should be righted, in order that peace may once more be made secure in the interest of all.

IX

A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

X

The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

XI

Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guaranties of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

XII

The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardenelles should be permanently opened as a free passage to the ships and commerce of all nations under international guaranties

XIII

An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenent.

XIV

A general association of nations must be formed under specific covenants for the purpose of affording mutual guaranties of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right, we feel ourselves to be intimate partners of all the governments and peoples associated together against the imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved; but only because we wish the right to prevail and desire a just and stable peace such as can be secured only by removing the chief provocations to war, which this program does not remove. We have no jealousy of German greatness, and there is nothing in this program that impairs it. We grudge her no achievement or distinction of learning or of pacific enterprise such as have made her record very bright and very enviable. We do not wish to injure her or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world—the new world in which we now live—instead of a place of mastery.

Neither do we presume to suggest to her any alteration or modification of her institutions. But it is necessary, we must frankly say, and necessary as a preliminary to any intelligent dealings with her on our part, that we should know whom her spokesmen speak for when they speak to us, whether for the Reichstag majority or for the military party and the men whose creed is imperial domination.

We have spoken now, surely, in terms too concrete to admit of any further doubt or question. An evident principle runs through the whole program I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Unless this principle be made its foundation, no part of the structure of international justice can stand. The people of the United States could act upon no other principle; and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess. The moral climax of this, the culminating and final war for human liberty, has come and they are ready to put their own strength, their own highest purpose, their own integrity and devotion to the test.

---

## General MacArthur

---

EXTENSION OF REMARKS

OF

## HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following edi-

torial and article from today's Washington Daily News:

STAND BY MACARTHUR

A deal is in the works at the Moscow conference for Russia to clip General MacArthur and take over a large part of the control of Japan, according to rumors. We don't believe our Government would be a party to any such thing. We can think of few worse calamities than such an arrangement.

It would play into the hands of the Japs by duplicating the chaos Russia has caused in the occupation of Germany. If there was ever any doubt as to the folly of the Berlin system of divided authority, certainly the sorry result of that experiment has removed them. We are already paying, and will continue to pay for a long time, for the mess that is being made of the German occupation.

In sharp contrast is the efficient job General MacArthur is doing in Tokyo. Not that he is dictating policy. He is following meticulously the Allied agreement of Potsdam as to surrender terms and how they shall be carried out. But the point is that he is carrying them out—in letter and in spirit.

It is a hard job. It is a job that cannot be done by committee method, by veto devices, by political jockeying in an international power game. The authority of executing policy must be vested fully in one man. That man, by Allied agreement, is General MacArthur.

He was chosen, first, because he was an American and America almost alone defeated Japan. He was chosen, secondly, because of all American commanders his long experience in the Orient and his brilliant war performance against Japan made him the ideal occupation chief. His record in Tokyo has exceeded even the high expectations.

Nobody in authority would deny Russia a place in the Jap settlement. She was urged by the United States and others to accept membership on the Far Eastern Advisory Council—her absence is her own doing, not ours. General MacArthur, for many weeks, has been offering cooperation to Russian staff officers in Tokyo, and has been waiting for a Russian division to take up its allotted position. But Russia wants to dictate the number of troops and their position.

It's the same old story. It's another warning of what would happen if Russia succeeded in replacing General MacArthur or dividing his authority.

President Truman must not let that happen—either at the Moscow conference or in the future.

---

WHY MAC'S POPULAR WITH JAP PEOPLE

(NOTE: A new Japan, in which the state is the servant of the individual and not the master of a nation of slaves, rapidly is being created by the Supreme Allied Command in Tokyo, the far eastern manager of the United Press, who has just arrived in the United States on leave from Tokyo, reports in the following dispatch.)

(By Miles W. Vaughn)

General of the Army Douglas A. MacArthur, in slightly more than 100 action-packed days since Nippon's war lords surrendered on September 2, has destroyed the ancient structure of Jap feudalism and rapidly has laid the foundation for the creation of a new democratic state.

The Supreme Allied Commander has achieved this by a series of far-reaching orders, some of unprecedented severity.

So stern, indeed, have been some of the general's directives that open resistance to them as feared by observers in Tokyo.

JAPS TAKE ORDERS

The Japanese, however, took every order with complete equanimity.

With every directive MacArthur's popularity with the Japanese people has increased rather than diminished. When the Supreme Allied Commander dissolved such great holding companies as the house of Mitsui, and imperiled the savings of millions of Japanese who had invested in shares of the so-called "Baibatsu," or great industrial companies, those whose funds were tied up joined with the masses of the people in approving the step as a measure unquestionably designed to prevent future wars.

So great, indeed, is MacArthur's popularity that it is a common saying in Tokyo that if Japan were a republic and if the General were to run for President he would be elected by a landslide vote.

SIGNS OF POPULARITY

Indicative of the popular attitude are these facts:

Crowds of considerable size gather in front of the entrance to the Dai Ichi Insurance Building to Tokyo daily to bow silently to the General as he walks down the steps from his office to enter his automobile to drive to lunch.

Dozens of letters are written to the General daily and most of them express complete approval of the MacArthur regime.

Leading Japs have gone so far as to state openly that they hope the Allied occupation will continue for 10 years or more, until the last vestiges of Jap militarism and ultranationalism have disappeared, and that MacArthur will continue as Supreme Commander throughout this period.

WHY HE IS POPULAR

Reasons for the General's popularity are manifold but appear to center chiefly around the following:

First, the mass of the Jap people, reared in the tradition of Asiatic military brutality, had expected that the victorious American troops would come ashore in the Nipponese home islands to loot, rape, and pillage. When the American soldiers showed exemplary discipline and offered Nipponese children chocolate bars rather than bayonets, the people gave MacArthur credit. A leader whose followers were good men must be great and good himself, the mass of the people soon decided.

The MacArthur program to develop democracy and assure the rights of the common man at first was received with some skepticism, but when words were followed by deeds the people were not slow to realize the benefits being conferred upon them.

HE IGNORES DANGER

The General's striking personal appearance and his obliviousness to danger also have played a part. The fact that he rides through the streets of Tokyo unattended, in contrast to the armed escorts who traditionally attend prominent figures, has not been lost on the Jap masses.

The general's popularity undoubtedly has been a factor in the success of his reform program, which has been carried forward with a speed far greater than the most sanguine observers thought possible at the time of the surrender.

WHAT HE'S DONE

Major steps that he has taken include:

Immediate establishment of the fact that the Allied command is the supreme authority in Japan. When the general wanted to see Emperor Hirohito he did not call upon him—the Emperor came to the general's residence.

A whole series of mass arrests of Jap wartime leaders who will be tried for war guilt. There is no indication that the Jap people resented any of the arrests.

The Jap armed forces, around which the whole life of the nation centered from the time of the Manchurian war to the surrender last September, have been disbanded and the once powerful ministries of war and navy abolished.

The huge corporate plutocracies which furnished the financial and industrial backbone for Jap militarism have been disbanded.

PENSIONS DISSOLVED

The vast military pension system upon which hundreds of thousands of Jap families depended for a part of their income, and which was used as a chief political weapon by the militarists, has been dissolved and the last pension payments will be made on February 1.

The once powerful network of political and military police, by which the militarists enforced "thought control" and complete national obedience to their policy, has been abolished. The number of ordinary civilian police has been decreased.

Freedom of speech, of the press, and of assembly has been established and is guaranteed by the supreme Allied command. The national educational system has been reorganized to eliminate the teaching of militarism and ultranationalism. Public schools now are classrooms in democracy.

The franchise has been widened and votes granted to women. General elections soon will be held to select members of a truly representative national assembly.

## Canadian GI Bill of Rights

EXTENSION OF REMARKS

OF

## HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

*Friday, December 21, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sgt. Richard Douglass, published in Yank, the Army Weekly, for December 14, 1945:

CANADA'S GI BILL

(Our neighbors to the north have worked out a much more thoroughgoing program of rights and benefits for veterans than we have enacted.)

(By Sgt. Richard Douglass)

OTTAWA, ONT.—There isn't much oratory in this particular parliamentary chamber in Canada's capitol. Sixty-four of the eighty-odd committeemen present, all members of Parliament, are veterans of the First or Second World War. A few are still in uniform. Two hold the Victoria Cross, equivalent to our Congressional Medal. As a parliamentary veterans' committee, they are hearing proposed amendments to the postdischarge reestablishment order.

This is just a fancy name for the Canadian GI bill of rights. The Canadians plan to nickname theirs the Veterans' Charter. Right now, though, the committee isn't concerned with names. It is reviewing the Government's entire postwar program for veterans, most of which has been operative for 3 years, to make sure it's solid before it faces Parliament.

Few major amendments are anticipated. The program was liberalized as the war progressed until today the benefits afforded Canadian veterans are among the most generous offered by any country. The plan is a much broader and more comprehensive program than our own.

But Canada's far-reaching veterans' program is not the result of a nothing-is-too-good-for-the-boys attitude. It is, in part, a reaction to the Dominion's unfortunate experience at the close of the First World War, when the veteran and his government—unwittingly spurred inflation.

In 1918 and the years that followed, the Government loaned veterans money for land

settlement. Prices of farm land and equipment, already exorbitant, skyrocketed. Two years later the bottom fell out. Only 3,853 of the 24,793 veterans who accepted government loans have repaid them. All but 7,000 quit the scheme. Many veterans squandered their gratuities (bonuses) on nonessential consumer goods and luxuries. The whole program was something the government would rather forget—except as a lesson in how not to do it.

This time Canada started planning its postdischarge program within 3 months after the government, on September 10, 1939, declared war.

"Lots of people thought we were crazy," says Walter S. Woods, deputy minister of the Department of Veterans' Affairs (DVA), a job corresponding to General Bradley's in our own Veterans' Administration in Washington. "They said: 'Hadn't we better wait until the war is over?' "

Woods, a gunner (private) in World War I, didn't think so. He recalled the small clothing allowance which was just about enough to pay for a raincoat, and he remembered also the government's land-settlement fiasco. So, before 1939 was out 14 subcommittees of volunteer citizens were planning an over-all program for the Canadian veteran. Without waiting for parliamentary action, the Privy Council made the veterans' benefits legal by emergency order-in-council. Result to date is something the Canadian GI, a first-class griper in his own right, thinks pretty good.

Upon discharge, the veteran receives (1) a cash clothing allowance of $100 and a priority suit certificate which gives him first crack at the available clothing stock (many clothiers have hard-to-get accessories laid away exclusively for veterans), and (2) a rehabilitation grant equal to 30 days' pay in his last rank plus dependents' allowances.

Before he leaves the district depot or separation center, the veteran makes application for his war-service gratuity.

The veteran receives a 'basic gratuity" of $7.50 per month for service in the Western Hemisphere and $15 per month while overseas. For every 6 months overseas, he gets a "supplementary gratuity" of 7 days' pay and allowances. This sum is paid in monthly installments, not exceeding the amount of the dischargee's monthly pay plus dependents' allowances. It is tax-free, and can't be attached.

The gratuity is payable to any veteran who served or volunteered to serve overseas. Under the National Resources Mobilization Act, soldiers were allowed to decide whether they would serve overseas or in Canada. Only 16 percent of the Army did not volunteer for overseas service. Several thousand of these nonvolunteers, known as Zombies, were sent across toward the end, however, and thus became eligible for gratuities.

Every serviceman from general to private is eligible for a gratuity. The basic gratuity is the same for everybody, but the supplemental gratuity (7 days' pay for every 30 days' service overseas) is based on rank. Canadian servicemen did not receive extra pay for overseas service.

Just as important as the veteran's gratuity is his reestablishment credit, equal in value to his basic gratuity.

Reestablishment credit may be used at any time within 10 years for the following purposes: (1) The acquisition of a home to an amount not exceeding two-thirds of the value of the property; (2) the repair and modernization of his home, if owned by him; (3) for furniture and household equipment not to exceed two-thirds of its cost; (4) as working capital for a business or profession; (5) for the purchase of tools, instruments, or equipment for his trade, business, or profession; (6) for the purchase of a business to an amount not exceeding two-thirds of the equity fund; (7) for the payment of premiums on Canadian Government life insurance, and (8) for the purchase of special equipment required for educational or vocational training.

The DVA estimates that the average veteran's gratuity plus reestablishment credit will total $900. So far, the average Navy gratuity plus credit is $1,122.

Thousands of dollars in gratuities (but not in reestablishment credits unless they settle in Canada) will be paid to the 13,611 Americans who served in the Canadian forces if they apply. Most Americans haven't applied yet because they don't know about the gratuity plan. The majority of those eligible served with the RCAF before transferring to the United States forces.

Lt. Col. J. H. Hogan, assistant director of reestablishment credits, says the veterans are in no hurry. Only 30,000 applications have been filed for a total of six and one-half billion dollars of credit. But about 500,000 of Canada's 1,000,000 servicemen and women are still in uniform.

Most veterans, including those in the women's branches, are using their credit to buy furniture. Thirty-eight percent of the credit applications have been for furniture, two and one-half million dollars' worth. Three Toronto girls—a supervisor, a cook, and an office worker—pooled their total reestablishment credit for $1,200 for furniture for their rooming-house business.

One veteran operated a side show in a prewar circus but sold his animals when he went overseas. It was the only business he knew. His credit application for a family of monkeys was approved. Another vet who had managed a miniature golf course wanted to get started again. He used to move his business southward by trailer as the weather got colder The DVA allowed him credit for a trailer, not as a home but as essential equipment. He got golf balls and clubs, too.

"Awaiting returns" grants to tide over the veteran who has started farming or gone into business for himself is another feature of the Canadian plan. These grants—from $50 to $70, depending on marital status, plus liberal allowances for dependents—are charged against the veteran's reestablishment credit.

A lieutenant commander in the Navy, a successful professional writer in civilian life, left a half-completed novel behind when he enlisted. He's getting an awaiting-returns grant for himself, his wife and child while completing his novel.

If the veteran decides to use his reestablishment credit for an education—either university or vocational—he is eligible for a living allowance of $60 if single and $80 if married, plus dependents' allowances as follows: First two children, $12 apiece; third, $10; next three, $8 apiece, or a maximum of $58 a month for six children. In addition, the Government pays tuition and incidental fees. The period of schooling is ordinarily limited to the number of months in service, although outstanding students, even if comparatively short-timers in uniform—may earn a degree and even do post-graduate work.

The back-to-school trend has already overtaxed the universities. Old war-plant facilities have been borrowed by Toronto and McGill Universities to provide housing and lecture space. DVA pays the universities $150 extra per student to help them meet the salaries of additional lecturers and the costs of classroom expansion. The University of Toronto has 3,200 vets; McGill, in Montreal, with three registration periods a year for veterans, has enrolled 1,400 in its college of arts, science, and commerce. Of the 123 first-year students at the Ontario College of Optometry in Toronto, 101 are veterans. If the course he wants is available at a Canadian university, the veteran must study here in Canada.

Veterans' Minister Ian Mackenzie says veterans attending universities are making "splendid progress." Only 45 of the 10,000 who enrolled between October 1941 and October 1945 dropped out for failure to meet academic standards.

"The veteran wants an education, not necessarily a degree," explained Dr. W. H. Hatcher, assistant dean of McGill's Arts College. "Our first class of veterans passed with an average of 70 percent, a magnificent performance in view of the slaughtering we do around here."

Under a training-on-the-job program, agreements ranging from 1 month to a year are signed between the employer and the Government. The employer pays the veteran at a rate that must meet with the approval of the Dominion Labor Department. In addition, the trainee receives the regular maintenance grants, but any earnings on the side exceeding $40 a month will be deducted from his living allowance. The veteran likes the training-on-the-job idea, because it is an easy step from this to a permanent job; the employer likes it because he has a chance to watch the man work before hiring him permanently, and the Government likes it because the program helps to relieve the overcrowded vocational schools.

The Veterans' Land Act offers the veteran a chance to go into full-time farming or to finance a suburban home costing up to $6,000. If his farming application is approved and he keeps up his time payments for at least 10 years, the veteran will receive approximately 25 percent of the value of the land and buildings free, plus a maximum of $1,200 for stock and equipment.

Some 3,500 farm properties have been purchased by the Government for sale exclusively to service personnel. More than 600 veterans have gone into full-time farming under Government auspices, but the Dominion is going slow with its farm program to leave a good selection of farms for men still overseas or just returning.

The other half of the Veterans' Land Act, under which dischargees may purchase suburban homes (so-called "small holdings"), is intended to give the veteran with a steady income in town a chance for a home in a low-income-tax area, where he can do gardening or stock raising.

Gordon Way, an ex-sergeant in a company quartermaster outfit (the position is equivalent to a supply sergeant), is one of 800 veterans already established on a small holding. Way, who landed in England with the second contingent of the First Canadian Division, in 1939, had $1,201 in gratuities coming to him when he returned in June 1944, leaving his English bride and baby.

"I started to look around for a job, not knowing exactly what I was looking for," Way said. "I intended to take a 4-year commercial course at Queens College, until a DVA vocational counselor pointed out that I would be competing with men 10 years younger than myself by the time I graduated. I realized he was right but no one had offered me a decent job." Then a civil service preference, by virtue of Way's time overseas, helped him land a job as chief clerk in the DVA public relations office.

It was months before Way found satisfactory living quarters. Meanwhile, Mrs. Way and their daughter had arrived. For a time they were compelled to live in a bungalow and share meals with their landlady; later they lived in a one-room tourist cabin. Answering an ad in the Ottawa Citizen, the Ways finally located a small holding. It is a 20-year-old two-story brick house on a half-acre plot, 15 miles from the capital. The price was $5,000. Way applied to the Land Act people for a loan. They investigated the property, interviewed Mr. and Mrs. Way to be sure they realized the inconvenience of country life, then approved their application.

Way made the required 10-percent down payment ($500) and signed a contract to pay $3,333.34 over a period of 20 years, in monthly installments of $19.25. Way received a grant of $2,000 from the Government. This

grant is as good as cash if Way keeps up his payments for 10 years. If he sells ahead of time, he must pay the total cost of the holding and equipment.

The Ways used up their household equipment credit of $250 by purchasing the owner's refrigerator and electric range. They spent $100 of their reestablishment credit for garden equipment and another $150 for nursery stock.

Way pays his commuting costs by using his 15-year-old Willys as a school bus, collecting a dollar a week from each student passenger.

Financial help to tide over the jobless veteran is available in the form of (1) out-of-work benefits or (2) unemployment compensation. The Government feels that the ex-serviceman shouldn't be obliged to take the first job offered. While he is looking around, he can apply for an out-of-work benefit. Payments are limited to 52 weeks or the veteran's maximum period of service and are the same as awaiting-returns benefits. Meanwhile, the veteran must be capable of and available for work.

After 15 weeks on a job covered by unemployment insurance, the veteran becomes eligible for the same benefits as a civilian who has been at work since Canada's Unemployment Insurance Act became effective in July 1941.

Health and insurance benefits are liberal. The veteran can take out a $10,000 Government life insurance policy without examination any time up to 3 years after discharge. He has 5 plans to choose from—policies to be paid up in 10, 15, or 20 years, or at the ages of 60 or 65. Policies have cash values after 2 years but no loan value. A widow or widower of a veteran is eligible as a policyholder.

Health benefits are not restricted to veterans with service-connected disabilities. Everyone is allowed free medical and dental care for 1 year after discharge.

The law guarantees the veteran his old job back if he applies within 3 months and assures him seniority. Veterans' preference in civil service is limited to overseas veterans and men receiving pensions. There are, incidentally, 22,436 pensioners plus 14,796 dependents of these pensioners who also receive payments.

By and large, Canada's postdischarge program appears to be working well. Gratuity payments, based on pay-book records, were slow at first. Now the veteran can expect his first gratuity check 6 weeks after discharge. Applications for furniture credit are usually O. K.'d within 4 days, but it may take several months before a veteran is settled on a farm or in business on Government credit. Volunteer citizens' advisory committees and district DVA supervisors investigate before these applications are approved. They must be satisfied these enterprises are worth while and the veteran is qualified to run them.

This caution is in the veteran's interest, because once he has used up his reestablishment credit to buy a farm, for example, he is not eligible for educational or other grants.

Benefits are now more generous than formerly. The clothing allowance started at $35, was increased to $65, is now $100. Out-of-work benefits have been upped $20 a month.

The Royal Commission on Veterans' Qualifications, after hearing representatives of education, trade-unions, and the military profession, recently made 82 recommendations to improve the program. Extensive changes also have been proposed to the Veterans' Committee by Canada's veterans' organization. The Canadian Legion, for instance, has urged that the cost of university and vocational training should not be charged against reestablishment credit, that students should be granted increased living allowances, and that surplus property from the War Assets Corporation should be available to veterans.

One of the veterans' big problems is shelter. Forty percent of married Army personnel, according to a late survey, have housing problems; between 10 and 12 percent definitely have no place for their families. The DVA is appealing to citizens by radio and newspapers to make available to vets any extra living space.

The Army, Navy, and Air Force have established extensive counseling services in Canada and overseas to help the veteran make a sound decision about his future. Brightly illustrated pamphlets in nontechnical language explain specific phases of the postdischarge program. Movies present the program to civilian and military audiences. "Good-bye, Mr. Gyps" is the title of one animated short showing how the vet may be swindled out of his gratuity. All three services have issued detailed vocational guides, to show employers what service-learned skills can be useful in civilian trades.

How the veterans' program will affect Canadian economy is anyone's guess. DVA officials hope there will be sufficient room for all the talent and know-how developed in university and vocational schools under Canada's GI bill.

"Our job," says Deputy Minister Woods, "is not to develop a special economy for the veteran. We can only make available certain opportunities to compensate him for his losses. As a result of our program, he should be a super Canadian."

Primary objective of the Canadian program is to assist dischargees to earn a living.

"It can only succeed," the Government tells service personnel in its Back to Civilian Life pamphlet, "to the extent that ex-service personnel are prepared to help themselves and to the extent that employers will provide opportunity. It cannot help those who have no desire to help themselves."

Some people may wonder if the vet is getting too much. Says Veteran Minister Mackenzie:

"We regard this expenditure as a constructive contribution to the future life of Canada. * * * These are the men who will return tenfold and a hundredfold in public service the small expenditure we may make now on their education and professional training."

---

## A Criticism and an Answer

EXTENSION OF REMARKS
OF

## HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. HOFFMAN. Mr. Speaker, the following is a recent editorial from the Herald-Press of St. Joseph, Mich., together with my answer:

HEW TO THE LINE

Hurling invective and epithets is one certain way of not finding a meeting ground for labor and management. More and more people, realizing that evasion of the Golden Rule is the fundamental cause of the world's and the Nation's social, economic, and political ills, are experiencing a feeling of revulsion against the tirades that fill printed columns and the radio waves.

Not until the American people stop throwing verbal brickbats and attempt seriously to solve their problems will any progress be made.

An incident of the senseless recrimination now in vogue occurred this week when this district's Congressman, CLARE HOFFMAN, tried to give CIO Vice President Walter Reuther a going-over in the public prints. Representative HOFFMAN, who would rather battle the CIO than do anything else, arose in Congress to call Reuther a draft-dodger who "asked deferment on grounds of dependency, although he has neither chick nor child." Reuther came back with the assertion that he never sought draft deferment. He and Mrs. Reuther are the parents of one child, a second child having died 3 months ago.

Congressman HOFFMAN is entitled to his views toward organized labor, and Reuther is entitled to his. Both, like all citizens, have the right to express those opinions and views, but in this last exchange it would appear that HOFFMAN injured himself by the accusations he reputedly made, and that Reuther exhibited the greater poise and dignity.

The people are interested in facts, not oratory. Allegations such as those attributed to Representative HOFFMAN in his remarks about Reuther are serious and, if untrue, are malicious. It is immaterial whether the target of vituperation is prominent or unknown. Every man is entitled to respect, if he is sincere. Whether Reuther is right or wrong in his economic views, no one has charged him with being insincere—that is, not yet.

---

DEAR EDITOR: I quite agree with you that "hurling invective and epithets" has little convincing power, though sometimes an accurate description of a policy or an individual may throw light on the issue. Then you pan me and praise Reuther because apparently you read somewhere—and you repeated the charge—that I "arose in Congress to call Reuther a draft dodger who 'asked deferment on grounds of dependency although he has neither chick nor child.'" You continued, "Reuther came back with the assertion that he never sought draft deferment. He and Mrs. Reuther are the parents of one child, a second child having died 3 months ago."

What I did say—and you will find it under date of November 29, on page 11227 of the CONGRESSIONAL RECORD, and I quote—was this:

"The UAW-CIO, through its spokesman, Walter Reuther—who, by the way, while a healthy young man, with a wage-earning wife, was deferred on the ground of dependency and remained during the war safely here in America, as the representative of the UAW-CIO—now demands that General Motors throw open its books to his inspection, apparently upon the assumption that he has the right not only to secure a fair wage for the members of his union, but to determine how the dollars received by General Motors from the sale of its products should be distributed as between stockholders, management, company needs for continuing the business, and the workers. The union also claims the right to limit the price at which motorcars should be sold."

You will note there is no charge of draft-dodging, no assertion that Reuther asked to be deferred; and if that statement is hurling invective and epithets, I'm sorry, but it will have to stand.

From a Government record, let me give you the following facts:

Reuther, in his questionnaire, did not state which class he considered himself to be in; he did not ask for a deferment. He listed as dependents his wife, May, who earned $1,000 per annum as a UAW employee (Reuther's confidential secretary), and his sister, Anna May, 17, to whom, he stated, he began to contribute $10 per week the September preceding his questionnaire. If Reuther was in ill health, if he had a child, his questionnaire did not disclose that fact, and he passed the physical.

R. J. Thomas, president of the UAW-CIO, and Reuther's superior, was the one who asked for Reuther's deferment, and that on three grounds:

1. That Reuther was a director of the union's General Motors' department.

2. That he was a member of the national subcommittee on training in industry of the National Defense Advisory Commission, and

3. That he was engaged in discussing plans for speeding up airplane production.

Mr. Reuther received two invitations from Uncle Sam, and his draft board, calling him for physical examination, denied the union's request that he be deferred because of his defense activities. The Office of Production Management asked him to join its staff. Reuther made no comment on either invitation. Previously he had stated that his job is with the union.

His draft board, No. 31, in April of 1941 held that Reuther had no dependents (the child came later). When R. J. Thomas' request for Reuther's deferment was up, Reuther stated that he would await his instructions from Thomas and Phil Murray, CIO president, before deciding whether to file an appeal. Thomas and Murray later announced that an appeal would be taken, and Murray, in a letter to the draft board, said that Reuther has direct supervision for the union on labor relations covering 79 plants and 173,000 workers. In May, Reuther was placed in class III-A by the appeal board, and the reason given by the board was that his wife was dependent on him. Again there was no mention of a child.

Your statement that I "would rather battle the CIO than do anything else" is in error. My first duty is to the people of the district, and if you want to come down, at my expense, and see whether I am on the job, I will be glad to have you. I want no quarrel with any powerful organization engaged in political activities, but I am not side-stepping any individual or organization which follows a course which I think detrimental to the welfare of the Nation or the people of the district. The CIO and its officers and its agents, over a period of years, have accused me of almost every evil thing from disloyalty down. Their charges have been false. I would be less than human if I did not on occasion reply, and I frankly admit that I have hurled more than one verbal brickbat in the direction of that organization and some of its officers. For the rank and file, I have the greatest respect. I know, because I know many of them, that they are just as loyal, just as honest, just as anxious to fulfill the obligations of a good citizen as you or I think we are.

You say Reuther is sincere. Granted. It does not follow that his philosophy is that of the people of the district or my philosophy, or that I cannot criticize it.

As long as we are on the subject, let me call your attention to the fact that a Government record which I hold in my hand as I dictate this states that on Wednesday evening, March 18, 1936, Walter Reuther was introduced as Comrade Walter Reuther at a meeting of the Young People's Socialist League, Masonic Temple, Flint. He was presented by Nordine Johnson who organized the women's brigade during the big strike. His topic was Russia's Economic Position Today. He said that he had spent 33 months in Europe. He proceeded to deliver an address praising European labor policies and workers' conditions. He was asked—and I quote from the record:

"Do you and the Soviet Union believe in religion and God or in science as a religion?"

The answer was:

"We do not believe in God but that man is god."

I do not subscribe to that doctrine, and, as you will note from reading the foregoing, I did not call Reuther any names, and if stating that he was deferred on the grounds of dependency when he was and when at the time his only dependent was his wife making a thousand dollars a year as his secretary is invective, then I indulged in the folly of using it.

The sentiments expressed by Reuther at the Flint meeting were similar to those set forth in a letter alleged to have been written by Walter Reuther and his brother, Victor, on January 20, 1934, from Abmozavos, Russia, and addressed to Melvin and Gladys Bishop, friends of the Reuthers. George Addes, secretary and treasurer of the UAW-CIO, Detroit, handed out copies of that letter to the delegates attending the convention held in Buffalo, N. Y., in August of 1941, where there was a bitter fight between John L. Lewis and Sidney Hillman. Addes at the present time is a brother officer of Reuther in the union which is now on strike against General Motors.

When Addes handed out the letter, he stated that the Reuthers would undoubtedly deny having written such a letter, and when that statement was made, Melvin Bishop, the recipient of the letter, at Addes' request got up on the platform and stated he had received the letter from Walter and Victor Reuther and that it was authentic. It is only fair to state that Reuther did deny writing the letter. The point of the matter is that in that letter the Reuthers are alleged to have advised their comrades in Detroit to fight for a Soviet America.

In years gone by, there has been not a little violence connected with the strikes in Detroit—strikes in which Mr. Reuther had a very active part.

In the papers of December 15—and, I assume, also in Detroit papers, which you must have seen—there appears a partial stenographic report of the present union GM negotiations. In that part of the report given out by the union, Reuther, in answer to GM negotiators is reported (if the press quotation is correct) to have, among other things said:

"We are telling you frankly you are not going to make any automobiles until this is settled, and you can go through all the contract cancellations you want. * * * You are asking for a fight, and, brother, you are going to get it, and if it is the last thing we do, brother, we are going to sweat this one out to the bitter end. * * * You haven't lost a damn red cent, and we will take it right down to the last bitter inch of the road, and when the plants open up, remember, part of it goes back into the plants. Don't forget about that. We have just started to fight, since this is the way you have asked for it. You made that decision when you canceled the contracts; you asked for it, you will get it, you will get it with everything we have got and then we will break it off. * * * You asked for it, and you are going to get the damnedest fight you ever had. * * * You can get all the injunction you want, but Dean isn't going to make Chevrolets and Buicks."

Reuther also announced that the union would call out the "panzer" divisions. Just what he meant by that was not made clear.

Now, I hold no brief for General Motors. I do speak for employees who must work for their living, for many of them. I believe in unions. I believe in collective bargaining. But from the bottom of my heart I believe that we will never get anywhere until there is equal justice under the law for everyone.

When, last Saturday, December 15, the House Labor Committee, and an overwhelming majority of its members speak for union labor, voted 10 to 7 to refuse to give further consideration to President Truman's fact-finding bill, I was one of the 4 Republicans included in the 7 who wanted to go ahead and draft and submit a bill before Christmas.

If in opposing the policies of the leadership of the CIO, and if in stating the fact that Reuther, a healthy, physically fit young man, was deferred on the ground of dependency, when his only dependent was his wife and perhaps a 17-year-old sister, is invective, then I injured myself and will have to take the consequences.

May I humbly and respectfully suggest that it would be helpful if editors, like others would make an effort to ascertain the facts before "throwing verbal brickbats"?

Yours for more and better criticism,

CLARE E. HOFFMAN.

EXTENSION OF REMARKS

OF

## HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast which I transcribed for delivery over radio station WMAM, Marinette, Wis., on December 30, Station WSOO, Sault Ste. Marie, Mich., on New Year's Day, and Station WDBC, Escanaba, Mich., on January 2:

Happy New Year, everyone, and I hope it really is a happy and a prosperous New Year for you all.

Down here in Washington, when the Congress reconvenes, as you know, on January 14 all of us in the House are going to miss the jovial faces of four of our veteran Members who resigned effective December 31, and that brings up a very serious subject that I want to discuss with you today, because it is one, in my opinion, which is vitally important to you and one which you should view with considerable alarm. The question is, What of the future in this the world's greatest legislative body and one of the last freely elected truly representative legislative bodies in the entire world? It is up to you folks back home to decide what kind of Congress you are going to have in the future. The Congress is a mirror reflecting the type of people back home who send your various Representatives to Washington. If you want able representation, if you want outstanding men and women to truly reflect the greatness of your community and congressional district, it is up to you to select those men by your free ballot, and it is up to you as taxpayers to insist that your Government make it not only attractive but really worth while for those who serve you here in the Nation's Capital and back in your district.

We are losing, all told, four outstanding Democratic Members of the House of Representatives. The Honorable SAMUEL DICKSTEIN, of New York City, chairman of the extremely important Committee on Immigration and Naturalization, has resigned to accept a New York State judgeship at a salary of $25,000 a year, and which, I believe, is a lifetime appointment. No longer will Mr. DICKSTEIN have to campaign every 2 years at considerable personal expense; no longer will he have to maintain a home in New York and one in Washington; no longer will he have to travel frequently back and forth from Washington to New York to give personal services to his constituents. No; his will henceforth be a judicial life at two and one-half times his salary as a Member of Congress. Mr. DICKSTEIN began his present service on March 4, 1923, and so he served in this House a total of 23 years.

Representative SAMUEL WEISS, of Pittsburgh, Pa., who began his service on January 3, 1941, has resigned to accept a local judgeship at a 50-percent increase over his congressional salary. Mr. WEISS was an all-American quarterback when he captained the Duquesne University football team some years ago, and for the past several years has been an outstanding referee in the National Professional Football League and is extremely popular among athletes everywhere and among his colleagues in the House of Representatives. SAMMY WEISS, incidentally, whom I know very well, recently told me that while he expected to continue his pro football refereeing, there was no profit in it for him

and only the love of the game made him wish to continue. He told me that at the recent New York-Washington Redskins game he was paid $80 for his job as referee, but it cost him out of his own pocket $120 to supply tickets to his constituents—and believe me, only the referee could secure them, because Griffith Stadium was sold out for that game just as it had been for every other game Washington played here this year. But the gentlemen to whom I want to refer from now on in this broadcast are Representative CLIFTON A. WOODRUM, of Virginia, who likewise started his service on the date of March 4, 1923, and is resigning after 23 years of service in this body. Mr. WOODRUM has been one of the most outstanding legislators this Nation has ever known. He was the ranking majority member of the most important committee in the House in recent years, namely, the Appropriations Committee. He resigns to take a very important position in private industry, and, as he said in his farewell speech to the House, it will be the first time in all his life that he has not held some political office. The other gentleman to whom I wish to refer today has been one of my colleagues on the House Merchant Marine and Fisheries Committee, the Honorable ROBERT RAMSPECK, of Georgia, who began his service in the House on October 2, 1929, and thus has completed over 16 consecutive years of service. In his retirement he has given up the chairmanship of the extremely important Committee on the Civil Service, and for the past 3 years has been the majority whip in the House. It has been his job as whip to keep the Democatic vote in line, and as a Republican I can vouch for it—he has done a mighty good job. BOB RAMSPECK retires to become the executive vice president of the Air Transport Association, a position which undoubtedly carries with it a very handsome salary.

Now, quoting from the CONGRESSIONAL RECORD, just what reasons do Mr. WOODRUM and Mr. RAMSPECK advance for their decision to retire. I quote first from Mr. WOODRUM'S farewell speech and want you to give careful heed to these remarks because these very able gentlemen can tell you much better than I can the thoughts which activated and made imperative their retirement.

When Mr. WOODRUM said, "An English philosopher once said that there are two supreme pleasures in life. One is ideal, one is real. The ideal, he said, is when a man receives the seals of office from his sovereign. The real pleasure, he said, is when he hands them back." Referring to ardors of campaigning—which all have to undergo every 2 years in the House, he told a quaint story about a Virginia sheriff. In Virginia, as we do in Michigan, all candidates are required to file an expense account and a list of their campaign contributions. This sheriff filled out his formal papers and then decided that they did not tell the whole story so he turned the blank over and on the back side he wrote this: "I traveled 1,200 miles; I shook hands with 1,293 people; I plowed 27 acres; I joined 7 lodges; I was baptised 3 times, 1 by immersion; I kissed 74 babies; I made love to 16 old maids; I was bitten by 3 dogs; and I was defeated by 65 votes." Well, I will add the observation that that sheriff did not have 16 counties to cover like your Congressman does.

After reminiscing about the early days in Congress, Mr. WOODRUM went on to say this, "I have heard it said that being in Congress is a thankless job. I am sure that many of our citizens deeply appreciate the service rendered by Members of this body. But undoubtedly many of our citizens fail too often to take into account the back-bending, heartbreaking burdens that the conscientious Member of Congress is called upon to carry. I know and I could name scores of men in this body who labor diligently day in and day out, Sundays and holidays, in season and out of season, for the interests of the constituencies that send them here and their country which they represent.

"These men serve on and on and continue to serve oftentimes at their own physical and economic disadvantage. I have seen men come to this body in the heyday of hopeful youth and stay on under the blistering spotlight of public service until those once raven locks were frosted by the passing of many winters, until that agile step had been slowed and that eagle eye had dimmed, literally burning out in the service of their country." He went on to say, "If I had a voice that would reach the ear and the heart of every citizen who loves and appreciates his country, I would try to say to them that this fine variety of individuals who constitute the House of Representatives, even with its shortcomings and its failures, is yet the anchor to windward of the great ship of American state in the seas of a restless world. Deprive the House of Representatives of its individuality and its independence and there will quickly come an end to free government. Whatever may be said of the antiquity of its rules, it is a legislative body that is strictly and literally immediately responsive to the will of a majority of its Members, and that is democratic government." And then CLIFF WOODRUM went on to lecture us in this fashion, "Congress is entirely too hesitant and too timid about doing anything for its own welfare. Remember that nothing can be done for the Congress to ease its burdens or to help its Members unless you are willing to do it yourself; you can take action for the Government employees; you can take action for the judges; you can take action for the various departments and agencies, but if anything is done for the Congress they must do it themselves. You certainly should without hesitancy increase the pay of Members of Congress. Thoughtful citizens of this country do not expect Members of Congress to serve here without sufficient remuneration to permit them to live in Washington and to discharge the duties of their office in a manner and according to standards to which they are accustomed. I know many Members of this body who dip into their own private income to augment their congressional salaries; and this does not take into account one, and sometimes two, political campaigns every year."

And then Mr. WOODRUM advocated that the Congress adopt some adequate retirement plan. There is at present under consideration such a proposal but Mr. WOODRUM ridiculed it. He pointed out—and I quote him—"If I were eligible to come under this bill, after 23 years' service, and at my age, after 23 years' service in Congress, if I paid the minimum $2,500 that is to be paid in I could then draw retirement, $100 a month. That is what the committee says will attract the best brains to Congress and keep them there. Or, if I exercised my right to pay back the 5-percent all the way back for the 23 years, according to the report, I would pay in $13,619, if I could borrow that amount somewhere, and then I could retire on $175 a month. If I remained in Congress 35 years, and lived to be 62 years old, I could get $5,000 a year." And then lastly Mr. WOODRUM very aptly suggested that now that the war is over Congress should definitely limit the length of its session. I think he made a very good point because we all know that committees lag in their debates and in their consideration of important legislation—and so does the House and the Senate in its considerations on the floor when adjournment day is not proclaimed far in advance. As Mr. WOODRUM said, "Let us never forget this, that the country seldom suffers from the failure to pass legislation. It has often suffered from the passage of legislation." And so, CLIFF WOODRUM, let me say to the people of my district, over this microphone, your service and your accomplishments while here will always occupy a foremost place in the history of our beloved country. Every Member of Congress wishes you the best of success in private life.

In his farewell speech Mr. RAMSPECK made some equally pertinent observations. BOB RAMSPECK came on the Hill as a clerk in the post office in 1911. He later served as a secretary to a Member of the House and finally he was elected in his own right. He pointed out that back in 1925 the salary of a Congressman was exactly what it is today and he fails to find any other parallel in industry or public life where a man is working today for the same salary he received back in 1925. He said, and I quote him:

"Actually, what you are working for is less than $5,000 per year. That is a shame and a disgrace and the people of this country would not want it to continue, in my judgment, if they knew the facts, and they ought to know them * * * I say that every expense incurred by a Member of Congress in the discharge of his official duties should be reimbursed to him. We do that for the executive branch of the Government"; and then he cited a typical example of what we all go through. He said he had been called back home—as we all frequently are—to make a speech at a banquet. Then, he said, "A distinguished gentleman from Washington, who is head of one of the agencies here, made the principal address * * * he came in followed by three men who worked for the United States Government in the branch office of that agency in Atlanta. One of them was carrying a brief case, the other one looking after his travel reservations, and so forth. He had a book in his hand that he used to write out an order for a ticket. They do not need any money. The third one was driving him around in an automobile at Government expense"—and he went on to say, "Mr. Speaker, there I was representing a half million constituents, staying in a hotel room at my own expense, no secretarial staff, no assistants, not even anyone to help me answer the telephone which was ringing about as fast as it could." And that is one of the things we all go through. I am always glad to go back to my district to accept invitations to speak but what few people realize is that it costs me on the average of around $200 for every trip I make back in the district and this money all comes out of my own pocket and it is not deductible from my income tax—and that is another thing few people realize. Your Government speakers travel on a Government expense account but not your Congressman. They travel with aides and secretaries also on a Government expense account—but not your Congressman. And even when it comes right down to the speech; most of them have their speeches written for them by a ghost writer but not your Congressman. Most of the people do not know that we cannot even deduct our telephone calls or many other expenses of our office from our income tax. All of the young men and women in the armed services of the United States can write a letter to anyone in the world and write the word "free" in the upper right-hand corner of the envelope in place of putting a 3-cent stamp thereon.

Congressmen do have the same franking privilege for official mail only. But a Member of Congress cannot write a personal letter. He cannot write any letter—business or otherwise—that has a personal reference in it. He cannot send a Christmas card, for instance, unless he puts a 3-cent stamp on the envelope and that expense is not deductible from his income tax. As the majority leader of the House, Representative JOHN MCCORMACK, pointed out his telephone bill last year was $1,878; 98 percent of the amount was for official calls in connection with his work as a Congressman, but he could not deduct it from his income tax. And then Mr. MCCORMACK made this statement referring to Mr. WOODRUM and Mr. RAMSPECK: "They retire voluntarily due to economic pressure. There

are many other Members of this body confronted with the same problem. I may take the House into my confidence and say that I at the present time could resign from the House and accept a position paying each year a very substantial salary. It is a tremendous pressure when I realize that the journey of life is passing and that some time in the not too remote future my years of productivity will be over so far as a return to civilian life is concerned. We do not expect the salary or compensation that private employ can pay. Government should not pay that, and none of us expect it. On the other hand, it is for the best interests of the people of the country to see that Members of Congress, their public officials, are at least paid that compensation which gives them a reasonable minimum security in accordance with the position they occupy and the responsibilities devolving upon them."

Well, you ask, Why doesn't Congress do something about it? Surely from the letters coming to my office there are many people who realize that Congress should get more money and they advocate it. There is one vital reason why Congress probably will not vote any substantial increase in its own salary despite the fact that it has had no increase in over 20 years. The reason is that all over this Nation today there are strikes for more money. Wages have mounted by leaps and bounds throughout the war and yet organized labor is clamoring today for 30 percent more. The minute Congress votes itself an increase in salary it will be on record as condoning a corresponding wage increase for everyone else and a wage increase for everyone else, including Congress, must eventually lead to inflation, but the fact still remains that you are losing the service of patriotic, capable legislators. You are not attracting talented men to replace them.

And now I see my time is up, and so until next week at this same time may I remind you this is your Congressman, FRED BRADLEY, saying good afternoon and God bless you one and all.

## Radio Address Transcribed by Hon. Fred Bradley, of Michigan

EXTENSION OF REMARKS
OF
## HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast which I transcribed for delivery over radio station WMAM, Marinette, Wis., on December 23; station WSOO, Sault Ste. Marie, Mich., on Christmas Day; and station WDBC, Escanaba, Mich., on December 26:

Merry Christmas, everyone. I hope you all have a wonderful day, and I hope that the New Year will bring forth all the happiness and prosperity in the world for you. Then again I hope that all of you who had your sons and daughters scattered all over the world during our recent world-wide warfare have them back with you for this Christmastide, but if not, at least you can take great consolation in knowing that the shooting is over in most parts of the world, and you can feel reasonably certain that they are now safe. When we look back just 12 months ago and realize that some 4,000,000 of our fighting men were fighting out of foxholes all over the world, and millions more tossing on the seven seas, and unfortunately with many of them being carefully tended to by the superb flower of our young womanhood, who ministered to their injuries in our hospitals at the front or well behind the lines, we can truly be thankful that this year much of that has come to an end.

Yes; as we go into this Christmastide, we can be truly thankful, and we can enjoy the real Christmas spirit in a manner which has not been possible for the past 5 years, at least, and generally speaking has not been truly enjoyed in the real Christmas spirit for almost 15 years. I do hope you all enjoy a most pleasant Christmas and New Year and wish for each and every one of you a happy, a beneficial, and a prosperous New Year. As for Mrs. Bradley and myself—if you will pardon a personal reference—we shall remain right here in Washington until the Congress reconvenes on January 14. We feel that it would be unfair for us to occupy space on railroad trains which might displace some serviceman or woman trying to rejoin their happy families on this occasion, but there are other reasons which impel me to remain here in the Capital to watch developments which, to me, unfortunately, are alarming at this season of the year when our Maker sent onto this earth the Prince of Peace to spread good will and peace on earth among all mankind.

I have grave fears, as I had after the last war, that much that we fought for, much that the youth of this land spilled its blood for, may possibly have been in vain. I pray that my fears are groundless, but I have those fears in view of recent international developments. I do not wish to interrupt your revelry on Christmas with a song of gloom, but it seems to me it is well that we take stock of ourselves and that you join me in my prayers that some of the threatening events of the present do not flare into bonfires in the future.

Before Pearl Harbor, Mr. Churchill and the late President Roosevelt held a conference on the Atlantic at which time they were supposed to have drawn up the so-called Atlantic Charter which later actually proved to be nothing more than the expression of personal opinions as to what we might hope for idealistically after this war was over. They hoped that at the end of this war the world would find itself enjoying the well-known "four freedoms"—freedom of speech, freedom of worship, freedom from want, and freedom from fear. The "four freedoms" thus enunciated proved to be a great battle cry and it is well to remember that a great battle cry, emanating from the mouths of statesmen or politicians, must be spread to the four winds to inspire men and in the past war our young women, too, to a fighting pitch which can lead but to victory. I pause to ask you what has happened to the idealistic "four freedoms"? Is there freedom of speech anywhere in the world today, except here in these grand United States? Is there freedom of worship in Europe or Asia today? Is there freedom from want anywhere in the world, outside of these United States? Is there freedom from fear in the Balkans—in the Baltic States—in India, in Malaya or Burma?

And I want to ask you this question, Are not we—the United States of America—fathered by an always benevolent Uncle Sam, being made into the world's greatest pawn on the same old international chess board of power politics? I have fervently hoped that the ground work so well laid in San Francisco for international cooperation to preserve the peace forever in the future would succeed. But it has always seemed to me that two of our late greatest allies would of necessity, and for their own preservation, join with us in the same spirit in which we approached this tremendous problem at San Francisco. Subsequent developments have proven that they have not—and seemingly will not—show that same spirit of cooperation and brotherly love and a sincere desire for world peace that we in this country hope for. They have gone further than that; while offending us, while bucking us openly and subtly behind the scenes they have, nevertheless, not hesitated to come over here and ask us—the American taxpayers—to foot the bills for them, today in money—tomorrow undoubtedly again in the lifeblood of our youngsters. For that reason I could not—and did not—support the congressional approval of the United Nations Organization. I knew when I cast my vote in opposition that it was futile, that our approval would be overwhelming in the House, but my conscience is clear and especially so from the defeatist attitude so frequently expressed to me on the floor by many Members who wanted to vote as I did but who felt the utter hopelessness of it. Well, some of you may say: "Do you not believe in international cooperation?" Of course, I do, when you get cooperation, but cooperation must be a two-way road as far as I am concerned.

Uncle Sam did his part in winning the last war. We poured out our sum and substance of this land to the tune of $30,000,000,000 and authorized an additional $35,000,000,000 to our fighting and nonfighting allies in the form of lend-lease, which when the Congress approved the program originally under duress from the administration, was supposed to be, at least partially, a two-way street. We were told then that we were loaning our arms and ammunition and other supplies to our allies for which we would receive from them in return either suitable materials in exchange for credit or eventual payment therefor. Today that's not only all being forgiven but the lend-lease balances heavily in our favor being completely wiped off the slate. All over the world, wherever fighting was going on or threatened for the future, we built gigantic airports and landing fields. In every instance we paid through reverse lend-lease for such local equipment and supplies and even rental of the ground that we found it possible to use. Today, we are forbidden to use these same fields for our commercial worldwide airlines that are owned by the same American citizens who had to pay the taxes to build those fields originally. In some of the southwest Pacific islands, that we took with the blood and guts of American youth, we have seen charged as reverse lend-lease so much per tree for every one that our artillery had to blast down in order that American troops could move forward in the defense or recapture of someone else's outlying possessions.

We built a bridge of ships—the greatest fleet the world has ever seen—to keep ourselves and our allies supplied all over the world, and then we leased these ships to our allies and in return had charged up against us reverse lend-lease for the expense of moving each of our fighting Americans to their fighting fronts. And, yes, even today some of our fighting allies are still using our own ships, rental free, to all practical purposes and are now asking us to continue that rent-free arrangement indefinitely in the future.

Well, you may say that all of these things are justified. You may even resort to the old argument of our debtor nations that they saved the war for us—that they held the line—until we were ready to fight. Well, I disagree with that argument. I doubt, for instance, that we would have had a Pearl Harbor if we would have had the 50 additional destroyers that we gave to Britain patrolling the seas around Pearl Harbor. General Marshall recently testified that had we not shipped the lion's share of our heavy bombers and fighting aircraft to the European theater before Pearl Harbor that bastion and the Philippines would not have fallen and thousands of those American boys would still be home with you for Christmas.

But to get back to the present. Let us see what is happening to lend-lease arms, munitions, and other fighting equipment right

today. Before we finished off the Japs we had in training in this country, at our expense, some 5,000 young Dutchmen who were trained by our Marine Corps in amphibious warfare at the American taxpayers' expense. After the war was over and while our own troops stationed in the Dutch East Indies were disarming the Japs and sending them home, our Foreign Economic Administrator received a request for $16,000,000 worth of equipment to outfit these Dutch for service in the Dutch East Indies. They got nowhere there, but they did through the Navy Lend-Lease Administrator. According to columnist Drew Pearson, under 5 Navy requisitions, labeled "NEN 10001 to 5," they received 450,000 gallons of 80-octane nonaviation gasoline, 25,000 gallons of lubricants, medical and surgical supplies, field rations, yard and dock materials—including pontoons for invasion landings and post-exchange supplies sufficient for a force of 5,000 men for 3 months.

Now you must remember that when the Japs filtered down rapidly through the Malay States down into Burma and in that whole area, they received a great deal of local cooperation from natives who had long been oppressed by European imperialism, by the Dutch, French, and British. They had been forced to work for many years at starvation wages, and they are now rebellious at going back under that same imperialistic iron heel. Those natives looked upon the United States as their savior and they counted on the "four freedoms." Today they feel disillusioned and fiery armed rebellion has broken out, and once again instead of realizing freedom of speech, freedom of worship, freedom from want, and freedom from fear, these natives find they are being ground under the imperialistic heel not entirely by British and Dutch troops but more especially by arms and ammunition that bear a stamp of U. S. A. And, therefore, idealists that we are—freedom-loving peoples that we are—we are being blamed for going back on our word as so widely proclaimed in the Atlantic Charter.

Recently our State Department consummated a deal with Britain for a so-called $4,400,000,000 loan. I am going to discuss that with you in the near future in detail. I intend to vote against it and possibly will speak on the floor against it. I have told you about the Dutch East Indies; I might add that British imperialism in Greece is another example of where the "four freedoms" have not worked, and let me remind you that in Ethiopia, where this whole last war started, the British have forced their way into occupation with their colonial troops of part of a nation which fought to the death against having the Italian troops invade their native soil. And lastly we come to the case of Siam. Siam had a record of 700 years of proud independence and when the Japs came in there the Regent of Siam, himself, was the head of the underground that cooperated so well with our own spies. And yet, the British are today using American-made lend-lease guns and tanks in the streets of Bangkok, the capital of Siam, and is it any wonder that the natives of Siam feel they have been double-crossed by the United States? Is it any wonder that we hear so frequently here in Washington from present world travelers that the British lion is making Uncle Sam despised all over the world.

Oh, my friends, as we here in this country enjoy our Christmas spirit, the privilege of having our loved ones back with us, should we not wonder whether or not our statesmen in Washington may not be this very day sowing the seeds for the planting of more American boys in the soil of foreign lands in order that European imperialism—and I must say American internationalism—may not perish from the face of the earth. I am opposed to it. I shall fight it as long as you send me down here to Congress.

I swore to uphold the Constitution of the United States when you sent me down here. Last week all but an immortal 15 Members of your Congress voted away one of the cardinal rights of your Congress—we delegated the power to send your sons to battle on foreign soil to an international tribunal—we hauled down the Stars and Stripes and raised aloft the new symbol of one world.

Until next week, then, I remind you this is your Congressman, FRED BRADLEY, saying good afternoon—a Merry Christmas to you all.

## Critical Situation in Indonesia

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I would like to call the attention of the House to the situation in Indonesia, particularly to the use of American lend-lease in the suppression of the liberties and freedoms of the peopes of that land.

I have had the privilege to receive a copy of a report by a student of Indonesia who was an eyewitness to the outbreak of the present armed conflict in that country. The report of this observer reveals several important facts which have not as yet been reported in the American press. Therefore, I have requested permission to reveal the contents of this report to Congress without revealing the identity of the observer. The request was granted, and I am most pleased to call it to the attention of the Members.

The report in full follows:

THE INDONESIAN INDEPENDENCE MOVEMENT

One of the most conspicuous trouble spots in the postwar world is Indonesia. Indonesia today is one of the greatest challenges to that new world of freedoms which the United Nations held out as a promise to all peoples during the war. The United States and Great Britain proclaimed to the world the principles of the "four freedoms" in the Atlantic Charter, and were taken seriously by subject peoples. VE-day and VJ-day have been achieved by untold sacrifices of the peoples and governments of the United Nations, yet 4 months after Japan's surrender, the United Nations witness, and are a party to, bloody strife because a people clamor for the right to aspire to be a nation.

The United States cannot remain aloof. In the meaningless statement issued by the State Department December 19 the United States asserts neutrality, yet the fact remains that American ships are transporting Dutch troops to Batavia and American lend-lease equipment is being used to crush a people's struggle for self-determination.

One of the main hindrances to enlightened opinion has been lack of adequate information on Indonesia and the present independence movement.

As a student of the Netherlands East Indies and an observer on the spot in the first critical month after reoccupation, I would like to answer briefly some of the questions the American people are undoubtedly asking:

1. Why don't the Indonesians welcome the return of Dutch tutelage which has been described as so beneficial; and why do they refuse to accept Queen Wilhelmina's offer of equal partnership in the Kingdom of the Netherlands?

The main Indonesian grievances against the Dutch before the war were:

(a) No civil liberties: The provisions of the Netherlands East Indies Penal Code effectively suppressed freedom of speech, assembly, press, and organization.

(b) Economic exploitation: Despite the fact that Indonesia is one of the richest areas in the world in natural resources, 98 percent of the population in its richest island, Java, lived on a subsistence level.

(c) Lack of educational facilities: The literacy rate in 1940 for the Netherlands East Indies was about 8 percent; for a population of 70,000,000 people there was only one university and two technical vocational colleges; what education there was was carefully devised to prevent the spread of modern social, economic, and technological knowledge. Most educated Indonesians studied abroad.

(d) No real participation in government: All key positions in the Government were occupied by Netherlanders. The People's Council was advisory and at most colegislative, and, moreover, nonrepresentative. Its membership consisted of 25 Netherlanders (of which 10 were appointed and 15 elected); 30 Indonesians (of which 10 were appointed and 20 elected from amongst Government-designated candidates); and 5 foreign Asiatics (of whom 3 were Chinese).

On the basis of past experience, the Indonesian leaders have no faith in general promises without concrete plans for their implementation. The crucial questions as to the extent and manner in which Indonesian interests and representation will be safeguarded in internal Government have so far remained unanswered. There are neither promises nor guaranties as regards suffrage, freedom of speech and assembly, nor concrete plans for Indonesian participation in economic enterprise.

2. Is the present Indonesian movement Japanese-inspired and are its leaders Quislings?

The idea of Indonesian independence and the fight for it has been growing in strength since 1908. By 1941, Indonesian political parties formed a federation, known as GAPI. At their 1939 congress, GAPI passed a number of resolutions, among which were the adoption of the present Indonesian red and white flag, the Indonesian national anthem, and the Indonesian national language. The principal aim of GAPI was eventual self-rule. Therefore, the present revolution is a logical continuation of the prewar struggle against colonial rule, but accelerated by the Japanese who utilized it to further their own ends.

It appears true that the Indonesian nationalist forces, of whatever shade, have been trained and armed owing to the presence of the Japanese. For this they are grateful to the Japanese, as even the most anti-Japanese among them freely acknowledge. The Indonesians maintain that the Dutch would not allow them to participate in the war against the Japanese, with the consequence that Java was at the mercy of the invaders and had to surrender in 7 days. The Indonesians hold the Dutch in contempt because the Dutch were unable to protect Java and are unable to reconquer it even from the Indonesians, unless ushered in by the Allies.

Most of the present nationalist leaders who formed the republican Indonesian Government, and support it, have a long prewar record of nationalist activity. Several among them, including Soekarno and Hatta, who on several occasions denounced the Japanese before the war, had been persecuted for their political activities and were imprisoned or exiled by the Dutch authorities. But also representatives of moderate political parties, which before the war hoped to achieve parliamentary representation by peaceful means, support the self-proclaimed independent Indonesian Government now. Suporting that Government also are active anti-Japanese resistance leaders who risked their lives under the Japanese occupation.

3. How representative is the nationalist movement?

Apart from the politically conscious leaders and party members, the nationalist sentiment has pervaded the broadest layers of the population, aroused by the simple slogan of freedom. It is obvious that the movement has united the most varied elements, including conservative native princes as well as radical left-wing parties and economically mined Chinese, and the reportedly apathetic Javanese peasantry. The American press has not given the true scope and strength of the nationalist movement in Java, testified to by observers in the field; rather, it has focused public attention on incidents, alleged atrocities and violence by "extremists," which are inevitable concomitants in any revolution and which are exaggerated as an excuse to crush the movement.

4. How did the present warfare develop and what does it lead to?

The Indonesian nationalists and their leaders were ready to cooperate with the British when the first contingent of the occupation force arrived on September 15. All civil administration and public utilities were in the control of the self-proclaimed republican government and functioned smoothly. On the strength of the official statement by the British Command, that their only aim was to disarm and intern the Japanese and evacuate the prisoners of war and internees, the Indonesian leaders pledged to the British full cooperation and assistance. Instead of considering this offer, the Allied (Dutch and British) authorities appointed the Japanese to maintain law and order. All orders to the Indonesians were given through the Japanese who thus remained in authority. (Thus, the ex-enemy of the Allies became an ally, and the potential allies were treated as enemies).

On September 18, Soekarno called a mass meeting in Batavia, at which he asked the assembled masses to cooperate with the allies, although the allies had ordered the Japanese to break up the meeting and to prevent Soekarno from speaking.

Far from taking measures to disarm the Japanese, the occupation command charged Japanese troops to "retake by arms" key cities like Badoeng which were controlled by the Indonesian civil administration. The Indonesians thus took to calling the allied occupation "the second Japanese invasion." At that time, no violence, except some cases against individual Japanese, had taken place or was threatened. During the first 2 weeks, the Indonesian leaders pleaded for opportunities to discuss the situation with the Dutch and the British. The Dutch would not, and the British could not, do it.

The Indonesians from the beginning made it clear that without preliminary discussions they would remain adamant in their opposition to the landing of Dutch troops. They also maintained that they had no quarrel with Dutch civilians or internees, nor even with the representatives of the Netherlands East Indies Government, provided these would sit down and negotiate with them. On the grounds that the Netherlands Government would not negotiate with "Quislings" the Hague prohibited any discussions.

Meanwhile, on October 4, some Dutch troops were landed at Batavia's port, Tandjong Priok. This provoked the first fighting between Indonesians and Dutch troops. Inconspicuously infiltrated into the city of Batavia, these troops took to patroling the streets in armed trucks (these trucks were marked USA), (the soldiers wore American uniforms with Dutch insignia). All neutral observers were agreed that they fired on Indonesians without provocation, and their actions seemed to pursue a conscious policy of provoking warfare. Soekarno ordered the Indonesians to remain off the streets after dark, to prevent their becoming victims of these provocations. This is how violence began. The Indonesians, striking back in self-defence, caused redoubled attacks, and from that point on the situation deteriorated.

Netherlands-inspired sources circulated many reports designed to alienate world opinion from the Indonesians. Besides, the world press in some instances received sensational news, which was false but which was never retracted. A striking instance of this was the so-called declaration of "holy war" on October 14 by the Indonesians against all Europeans, the report of which was based on no more than a leaflet delivered to news reporters. The leaflet bore the signature of the Republican Government, which in reality had never issued it. The Dutch press in Batavia did not carry a reference to this declaration of war, though it was headlined by the world press.

Meanwhile, subsequent events and ever-growing bitterness have produced a situation which has become a critical impasse. It is obvious from the scope and strength of the nationalist movement in Java that it will take full-scale military operations to crush it by force. In all appearances, this is a course that has been decided upon by the Dutch and the British, with no effective protest on the part of the United States.

5. Can the situation be resolved by peaceful means?

The Indonesians have consistently asked for consideration of their case by the United Nations, on the basis of the stated aims of the United Nations. They would be willing to abide by any decision made by the United Nations, including trusteeship status, even under the auspices of the Dutch, provided a definite date were set for their eventual independence.

Whatever techniques the United Nations will devise to handle this matter, it is clear that the United Nations as a body now must assume responsibility for the peaceful solution of the conflict.

## The Honorable Robert Ramspeck

EXTENSION OF REMARKS
OF
### HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. PLUMLEY. Mr. Speaker, nothing I can say in tribute to him will add to the genuine affection and high regard that his colleagues feel for BOB RAMSPECK.

Bob came up the hard way, but never missed a bet. He stored every bit of worth-while experience, collected on the way up, to use to his personal advantage and for the benefit of the country.

That he comes from Georgia and I from Vermont geographically separates us. Yet otherwise it is not so.

A fearless fighter for those things in which he believes, he has been a bad man to tangle with. When he said a thing was so and he knew it, contradiction fell flat on the ears of listeners, for Bob's integrity, ability, and perseverance for a cause were recognized. We shall miss him on our side of the aisle, for while he was a doughty champion he was a diplomat—and shrewd, at that.

I shall always treasure the memory of the years when he and I came together as whips for our respective parties. When he and I had made a canvass, we could well prognosticate what the political weather would be when the roll was called.

He was a fine man to work with, or against. You might always be assured that, though perhaps Bob might have no use for your partisan notions, that fact did not interfere with his regard for you.

The career of BOB RAMSPECK is an inspiration and a challenge to the youth of America. His life is one to be studied by those who are willing to work in order to achieve an ambition only to be realized by those who are willing to pay the price. There is no genius other than hard work. Ask the Honorable ROBERT RAMSPECK if that be not so.

More power to you, Bob. May you derive such satisfaction from your new fields of endeavor as is measured by the pride we feel in what you already have accomplished.

## Britain Discriminates Against American Marine Insurance Underwriters

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. CELLER. Mr. Speaker, it has come to my attention that the effect of the loans now being made to foreign governments by the Export-Import Bank has been to divert a large volume of business from the American insurance market to foreign markets. This results from the fact that shipments which would ordinarily be financed by American manufacturers and exporters and insured in the American market are now paid for before shipment with funds loaned by our Government, and covered by marine insurance placed in foreign markets. Although the insurance may be placed in the first instance in the country of destination I understand that, by means of reinsurance, most of it finds its way to the London market. Consequently, a continuation of the present system will seriously cripple the American marine insurance market.

This seems to me a serious situation, in view of the fact that Congress has consistently indicated its intent that there should be in this country an adequate marine insurance market to serve our shipping and foreign commerce.

To remedy this situation I believe legislation should be adopted which provides that any loans made by the Export-Import Bank of Washington or any instrumentality of the Government for the purchase of United States products provision should be made that any marine insurance placed on such products should be placed in the United States, unless as to such products the Maritime Commission, after investigation, shall certify to the Export-Import Bank of Washington, or to such other instrumentality of the Government, that such insurance is not available in the United States at reasonable rates and on reasonable terms and conditions.

As the money lent by the Export-Import Bank has to be spent in this country, the American manufacturer and American labor are taken care of automatically, but this is not so with regard to ship owners or marine underwriters, although ship owners may be taken care of under United States Code, title 15.

Marine underwriters should be given some share of the protection extended to other American interests. Under the United States Code, aforesaid, shipments financed by the United States Government to foster the export of agricultural or other products are carried in vessels of the United States, whenever available, at reasonable rates.

Citizens of the United States have a perfect right to insure abroad if they wish to do so, but in the case of exports financed by our own Government, consideration should be given in favor of our marine insurance companies. Marine insurance companies do not wish to expand their volume of business, but wish to maintain the business they already have.

In the proposed loan to Britain, American marine insurance companies have no protection. Great Britain, undoubtedly, will do everything in her power to divert marine insurance of goods purchased in the United States with American money to the English market. This would be fatal.

When the British loan comes to the House, I shall make it my business to try to give some sort of added protection to the American marine insurance companies and underwriters. A condition precedent to that loan should be that goods purchased in the country with American money must be insured in the American market.

As is, the American underwriters are suffering from currency blocs and other forms of control by foreign governments, whereby their business is being diverted to foreign markets. All they wish to do is to preserve the historical pattern of their business. They are entitled to retain the same proportion of marine insurance business which they had in the past as long as they write it on terms and conditions comparable to those in other markets.

Furthermore, these American marine insurance companies are entitled to a fair proportion of the business that formerly went to our enemies, Germany, Italy, and Japan. They should have the right to compete with foreign markets for a fair proportion of this business. But if these foreign markets are given the edge by such devices as currency blocs, American marine insurance companies cannot compete fairly and squarely with the foreign markets. They will have two strikes against them before they go to bat. This is all the more reason why in case of purchases financed by the Export-Import Bank or United States Treasury, the marine insurance should be placed with American outfits.

## Bottlenecks in Home Building

EXTENSION OF REMARKS

OF

### HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. ANGELL. Mr. Speaker, we are all deeply concerned over the bottlenecks in the building industry. Literally tens of thousands of veterans and servicemen are unable to find housing so that they may have roofs over their heads. The situation is becoming America's No. 1 problem. I am including in this brief discussion correspondence with the National Lumber Manufacturers Association and a letter addressed by it to John W. Snyder, Director, Office of War Mobilization and Reconversion, with respect to the critical building and lumber situation. Immediate steps should be taken to give the green light to the building industry so that homes may be provided for our people. The correspondence to which I refer is as follows:

NATIONAL LUMBER
MANUFACTURERS ASSOCIATION,
*Washington, D. C., December 20, 1945.*

Hon. HOMER D. ANGELL,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. ANGELL: The lumber supply situation is being described currently as one of the bottlenecks in the construction of small homes. While present production is more than sufficient to build the 400,000 to 500,000 homes the Government officials say is the maximum that can be built in 1946, adequate lumber for a million more new low cost homes would be available if production could be restored to the level it reached in the wartime year 1942.

To assure this plentiful supply of lumber the principal need is an incentive to produce. Mills which closed down during the war because of manpower shortages or as a result of the unrealistic price policies of OPA and those which are closing down now for the latter reason, cannot be expected to resume production when OPA continues to follow a policy which is designed to permit only 75 percent of the industry to break even or make a profit and dooms the other 25 percent to extinction.

We hope you will interest yourself in this problem, which is discussed in some detail in the attached letter to War Mobilization Director Snyder, and that you will do what you can to induce the OPA to help solve the housing problem by adopting a more realistic policy.

Sincerely,

HENRY BAHR, *Secretary.*

---

NATIONAL LUMBER
MANUFACTURERS ASSOCIATION,
*Washington, D. C., December 18, 1945.*

JOHN W. SNYDER,
*Director, Office of War Mobilization and Reconversion, the White House, Washington, D. C.*

THE LUMBER SITUATION

DEAR MR. SNYDER: Shortly after VE-day, the War Production Board pointed out in a public statement that the availability of lumber might be the deciding factor in the partial reconversion then under way.

Unfortunately, such a realistic and forward-looking viewpoint was not apparent in any other Government agency. Despite repeated, almost daily appeals, the Office of Price Administration, the United States Employment Service, and other Government control agencies, have failed to appreciate the basic importance of lumber in the restoration of a normal peacetime economy.

Last June, your predecessor, Judge Vinson, was cautioned in letters and in person that the industry alone could not solve Government-imposed production obstacles. Those cautions were not heeded, and the lumber industry, 4 months after VJ-day, is described as a bottleneck industry, with no important constructive steps being taken to eliminate the Government-imposed obstacles to increased production.

When the revocation of Construction Limitation Order No. L-41 was announced in September, your office established a six-point program for the stimulation of home construction and the production of materials. These objectives included increasing the supply of, and strengthening of price control over, building materials and the enlistment of industry support for these objectives.

If certain of the policies established to carry out these programs are not modified to permit practical solution of practical problems, we contend that they will defeat their purpose and that less housing, rather than more housing will be the result.

Lumber is a basic housing material. Without adequate lumber supplies the objective of adequate housing cannot be reached. Lumber is at present in short supply. So that you may better understand the current situation, and how present policies deter rather than encourage production, let us review briefly what has happened in the past several years.

When the war broke out in Europe, production of lumber was stepped up from the 1930–39 average of 19,800,000,000 board feet to 28,900,000,000 feet in 1940; to 33,400,000,000 feet in 1941; and to 36,300,000,000 in 1942. Since 1942, however, production has declined to 34,300,000,000 feet in 1943 and to 31,600,000,000 feet in 1944. The latest estimate of 1945 production is 26,700,000,000 feet, in spite of a loss of three-quarters of a billion feet because of strikes in two of the major producing areas. In one major area, the strike is still in progress after more than 3 months.

Wartime demands for lumber far exceeded production, and, as a result, stocks at the mills were reduced from 9,400,000,000 feet at the end of 1940 to 3,600,000,000 feet in September 30, 1945. Inventories of lumber yards throughout the Nation were depleted in about the same proportion.

Except for the past 4 years, when the industry was limited by war controls, lumber has always been in adequate supply. Construction has never depended on the availability of lumber. On the contrary, the lumber industry has always been limited by the size of the construction market. It will return to that condition when the Government gets out of the way.

On October 25, 1945, you, OPA Administrator Bowles, and NHA Administrator Blandford testified before the complaints subcommittee of the Senate Small Business Committee. The following is a composite of statements as to the home-construction situation at that hearing:

(a) "It is not likely that we can build more than 400,000 to 500,000 houses during the coming year." (Snyder and Bowles.)

(b) Scarce building materials include brick, clay sewer pipe, structural tile, cast-iron soil pipe, bathtubs, and cast-iron radiation, gypsum lath, and lumber.

(c) "In lumber, for instance, developments which have occurred since VJ-day make it very doubtful that the amount of lumber required for new construction will be forthcoming during the months ahead. Production is basically limited by shortage of manpower and strikes. * * * Unless the situation improves promptly, it will not be possible to build up stocks at sawmills and distribution yards to the point desired for handling the expected large construction demand next spring." (Snyder.)

(d) "It is conservatively estimated that American families will need 12,500,000 new dwellings during the next 10 years—an average of 1,200,000 new units per year. During the period from 1937 to 1942 only 515,000 units were built in the average year." (Bowles.)

Paragraph (c) above refers partially to the reason for the lumber shortage. It is true that manpower inadequacies and strikes have been partly responsible. But another and very real factor has been the stifling

effect of ceiling prices that did not provide cost protection to a large percentage of the Nation's lumber production. Your office has been supplied with factual data concerning this. The industry has time and again brought this fact to the attention of Government authorities.

In your memorandum to the President released on December 12 you state that "Nothing less than several years of peak production will really solve the housing problem."

We are in accord with that conclusion. To secure that peak production of housing, peak production of lumber is necessary.

The lumber industry has adequate timber resources, ample capacity, sufficient capital, and knows how to produce the required lumber. It does not have sufficient manpower, and the pricing policies of OPA are stifling production. As noted above, production of lumber declined from 36,300,000,000 feet in 1942 to less than 27,000,000,000 feet this year—a drop of more than 25 percent. That loss of production, if regained, will be sufficient to build a million small low-cost homes a year.

That production cannot be regained, however, as long as OPA continues its present policies. The lumber industry, with 40,000 producing units, is characteristically one with many "births" and "deaths." Thousands of mills operate only when conditions are favorable, when there is a real incentive to convert investments in standing timber into cash.

Present policies of the OPA do not encourage such operators. It is not reasonable to expect idle mills to get into production when OPA frankly states that its price ceilings are designed to permit only 75 percent of the industry to break even.

The other 25 percent of production must operate at a loss and is doomed to extinction. This formula results in progressive elimination because successive applications do not include that portion of the production which has been eliminated, and a lower average margin is provided for the declining segment of the industry which is protected.

Why is it not possible for OPA to increase to 90 percent or 95 percent their marginal break-even point and thus assure increased production?

Another policy of OPA which aggravates this situation is the practice of determining the financial situation of a firm manufacturing several products on the basis of its over-all profits from all products rather than in the basis of its margin on individual commodities. This policy has resulted in unnatural channeling of lumber into what are normally by-product industries. It has now been modified as it applies to some other industries. Is it to be changed for lumber and other forest products?

Finally, the delay in granting price relief, even when relief is justified under these unrealistic policies, has resulted in further substantial losses in production. In a period of rising costs, delays of from 6 to 9 months in reaching a decision and granting relief are serious. Throughout the war and since, OPA can well be characterized as the outstanding exponent of "too little and too late."

A new priorities system is being inaugurated to channel inadequate supplies of building materials, including lumber, to builders of low-cost housing. Even if this program could break the bottlenecks which are retarding house construction by channeling materials to low-cost house construction, it will of a certainty create bottlenecks in several other important reconversion programs. Farmers have been starved for lumber for several years and need lumber for housing and for many farm purposes. Industries, important in reconversion, also require lumber. As soon as lumber is channeled away from the farms and industries, new controls will be necessary to channel it back.

Government controls will not solve the problem. What is needed is increased production, and increased production can be achieved only by the removal of Government controls, especially price controls which are retarding production.

In view of the urgency of the situation, will you direct Stabilization Administrator Collet and Price Administrator Bowles to modify present policies to the extent necessary to enable the lumber manufacturing industry to do its share in solving the current housing problem?

Respectfully,

HENRY BAHR, *Secretary.*

Copies to Stabilization Administrator Collet, Price Administrator Bowles, CPA Administrator John D. Small.

## American Democracy in Austria

EXTENSION OF REMARKS

OF

## HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mrs. LUCE. Mr. Speaker, the attention of my colleagues is invited to the following excerpts of letters received by me from an Austrian friend now overseas. This friend is also a long-time friend of American democracy and undisputed enemy of nazism. I do not vouch for the accuracy of the facts presented by these letters.

But that they are sincerely felt to be the truth by a highly qualified observer of Austrian postwar conditions, there can be no doubt.

They reflect a deep disillusionment with the workings of American democracy in Austria which cannot fail to depress all true friends of that country, and give us great cause for alarm concerning our present policies vis a vis this land.

Mr. Speaker, those of us in this House who are deeply distressed by our country's failure to practice what it preaches abroad, and by our continuing betrayal of the Atlantic Charter and so-called "four freedoms" in all quarters of the globe, feel doubly helpless when we receive authentic letters like the following, from a noted foreign friend of our country and its ideals. We do not know quite how to check these facts. We do not know how to correct these conditions if the facts should prove to be true.

All we can do, it seems, is to give such letters publicity, and hope that if they are the truth, the published truth will help somehow a little, to make and keep our Austrian friends free.

First. Translation of excerpts from a letter of December 10, 1945, from an Austrian democrat:

THE FINANCIAL REFORM OF AUSTRIA

Here are the secret and authentic facts about the Austrian financial reform, secret only as far as the intentions of the Inter-Allied Control Commission. You will remember that the financial reform was delayed by the veto of Russia, or by Russia attaching to the reform impossible conditions. Finally, it was agreed upon that on December 21 Austria was to return to the schilling currency. Five billion schillings will be printed. (Formerly Austria had 2,000,000,000 schillings.) The existing marks will be put on frozen accounts and each Austrian will receive the sum of 145 marks a month. These facts were made public.

However, what the public does not know (and what is kept secret by the commission) is that Austria will have to give on December 21 in cash to Russia as a gift the sum of 1,000,000,000 schillings and to the three other Allies the sum of 500,000,000 schillings.

The western powers have promised that this "gift" was to be used only for payment of their troops. This payment in some instances is quite a bit stretched, since, for instance, the French also pay from this sum vacations in St. Anton for civilians. (Note: I presume from the text that these civilians are government employees working for the French in Austria).

Russia has given no such promise. The result will be that after December 21 only the Russians will have any money left in their zone. It is obvious that it is impossible for the people to live with 145 schillings when 1,000,000,000 of the same currency is circulating in the zone. Therefore, the Russians will be able to buy whatever they want and people will be only too eager to sell them anything they have in order to have enough money to buy food. In the Russian zone there will, of course, be an inflation in a matter of days, where only the Russians will have the money. The Russians have decided that they would use this favorable situation to buy also from all other zones. Already a committee was set up by the Russians, composed of Austrians and Russians, for such purchases.

The Americans and the British, in order to avoid that, will close their zones watertight.

The result of the financial reform will, therefore, be that the free intercourse between the zones (which has really never quite existed) will be economically stopped and that Austria will be strangled worse than ever. The inflation will not be directed by nothing but the advantage of the Russians. Systematically Austria is killed off under the symbol of liberation. You cannot imagine how terrible it is to see all that and be in no position to help. Formerly the people called these methods Nazi oppression, and now?

Second. Remarks about the press in Austria—letter of December 5, 1945:

The situation with the press is very bad here, and the fault lies definitely with the Allies. The press preaches democracy, but that's where everything stops.

The first difficulty is to get a newspaper started. You need the authorization of the Allies, which you might get or not. I know all this because for 3 months we have now been fighting to get permission to publish one daily and two weeklies—and we simply cannot get permission. Once we were so far as to get the paper, but it was subsequently taken away from us and used for some entirely different purposes. It is purely arbitrary whether you get the paper or not. And those who give the paper always think in terms of possible reaction in their home country. In the French zone they told us frankly that if they authorize us to publish a paper the French Communists might protest.

In the American zone our difficulty lies in the fact that the officers who are to give the permission for publications are all PM left-wingers, and therefore would refuse the permission to papers of a political creed which is not their own.

As to the Russian zone * * *.

And, finally, in the British zone freedom of the press has not as yet been introduced.

So we are here, a powerful political movement in Austria, without the means to publish a newspaper, or even a weekly paper, simply because we cannot get the Allied permission to print for purely power-political considerations. It is just like in times passed—and certainly not like under the rule of the "four freedoms." And in this case the State Department is not at all responsible; it is the Psychological Warfare Division of the War Department.

But let us assume that we do get the permissions. Then the Allies reserve for themselves the right to distribute from the available paper supply. The system of distribution is as arbitrary as in a full dictatorship. One gets a lot, the other nothing. In Vienna the Communist paper gets enough to print 500,000 copies, the paper of the People's Party for 90,000, and the Socialists for 110,000 copies. The same system, in slightly different proportions is applied to the provinces.

And once you have obtained the paper (often after substantial bribes to some officers in charge) you are authorized to publish 2 pages 6 times a week. Before coming out of press you must pass a strict censorship. And this censorship does not only watch what you write, but also what you do not write. The censorship forces you to write articles in praise of the Allies, even if you darn well know that they are not true. The censorship naturally does not order it, but if you don't praise the paper gets held up till after your deadline or gets half of the contents censored. The idea is that the Allied commanders are very satisfied if they get the praise in the press and send it home as proof of the appreciation of their good government. And in that all four zones are identical. The praise must be lavish, byzantinian, almost like in times of the late Adolf Hitler. Everything the Allies do is wonderful, has the mark of the genius, each commander is so popular as no Austria statesmen has never been before him. Everything good is done by the Allies, who are infallible. And so it goes day in day out, with no one believing what is printed and jokes getting around about the Allies learning every day more from the Germans.

Well the paper writes a beautiful article about General Snooks, who comes from the greatest country in the world, was professor at the greatest university of our times (Mugford College in Mugville, Iowa) and now has made the great sacrifice to come to us poor Austrians to teach us democracy as well as how to drive a car and educate our youth. But after that's written the paper has to publish something for their readers and here the difficulty begins. When the freedom of the press was granted, it was stipulated that nothing could be written of a critical nature about the forces of occupation or countries occupying Austria, nothing about the behavior of the troops, nor anything that might promote disunity between the Allies. So what can one write about? Let us take the case of Iran; hardly anything was written here about it, as it shows disunity among the Allies. When Bevin spoke of Russia it was not published in Austria, but appeared in the papers published by the Allied Forces of occupation in Germany.

Let us take a case here in the French zone: When the world press became quite critical of the policy of the French occupational forces in Austria the French prohibited the entry into the country of foreign papers. One of the papers in Innsbruck listened in on the BBC broadcasts from London and published the news picked up from there. A few days later (that was about 2 weeks ago) the French police arrived at the paper seized the radio equipment and forbade the paper to have any more radio-listening service. All the news can only be gotten from the French Army News Service, which brings only news about De Gaulle and other generals. And that not only happens in the French zone, although it is somewhat better in the American zone.

We just don't have any paper worth reading, and no news from abroad. We must think of the fact that this is the only way people here can see Allied democracy, and we certainly can hardly blame them if they get cynical when they hear the announcement of high and lofty democratic principles from Allied capitals.

Third. Excerpts from a letter of December 7, 1945:

UNRRA IN AUSTRIA

This morning a communiqué over the radio stated that UNRRA would not have any shipping space available for Austria until March. Is that correct? I want to emphasize in this connection that what Mr. Lehman told about UNRRA only being criticized in America, this is by no means true.

UNRRA is criticized all over Austria for both her graft and her inefficiency. Many people say that the black market in Europe is fed by some UNRRA people. Again and again we hear of UNRRA employees having been arrested. Here in Austria the UNRRA crowd cost us a lot of money and nothing happens. They ask for a lot of things and don't give us anything. And if anything is given it costs us terrific prices. Why, for instance, did UNRRA leave in this country (Austria) the few Greek displaced persons who were hanging around for months and then suddenly they had all to be shipped by plane to Greece? Everybody wonders where the billions of dollars of UNRRA are going. As far as we are concerned we certainly have paid more than received.

## Pearl Harbor

EXTENSION OF REMARKS
OF

### HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. SABATH. Mr. Speaker, it had been my profound hope that after the travail of 4 years of war, in which with our allies of the United Nations we had staved off slavery and brought catastrophe to victory, our own Nation might have continued in peace and good will, united in the bonds of common struggle against tyranny.

I had hoped that politics would be suspended during these important days of reconversion, when our Nation has the burden of insuring peace and plenty for 137,000,000 of our own people and hundreds of millions of human beings in foreign lands, whom we helped to save from serfdom, hunger, and even death. I had hoped we would accept our world responsibilities and the implications of the harnessing of atomic energy.

I had hoped in vain. There are some who, like the Bourbon kings, forget nothing and learn nothing.

A quarter of a century ago we fought and won another world war to make the world safe for democracy. Then we fought and lost a political battle to win the peace, sabotaged by an irreconcilable group of petty men led by the late Senator Lodge, who would rather see the world ravaged by war and death than part with one jot or tittle of their arrogant assumption of power.

That spirit is still alive.

America is not proud of the Pearl Harbor disaster. Our late President spoke of December 7, 1941 as "the day that will live in infamy."

I believe that history will show that the Pearl Harbor disaster came, not from carelessness, not from stupidity, but from the will of the American people, carried out through our leaders, to do everything in our power to avoid war. We did not move toward war; war moved toward us.

Now the isolationists, the beneficiaries of the international trade in death and carnage, have siezed with rabid avidity upon the tragedy of Pearl Harbor to try to prove God knows what, and the Republican Party, which shared in the conduct of the war just as every American citizen did, has not been above entering this shameful conspiracy.

Are Republican members of the Pearl Harbor Joint Investigating Committee trying to indict the Secretary of War, who has served the Republican Party and America stanchly and greatly for a lifetime?

Are they trying to indict the late Frank Knox of my own city of Chicago for his share in winning the war? Is there a Republican today, high in his party's councils, who has contributed as much to America and to his party? The great Secretary of the Navy served his party and his nation diligently and well, and he gave his life to his country as much as if he had been on the deck of an American warship in the darkest days of conflict.

Republicans have little to gain and much to lose by partisan conduct of this investigation. The fact that a former employee of the Republican National Committee sat on the right hand of Republican members of the committee and guided their questions exposed the bitter bias and retreat from reality of which a once great party has been guilty.

The untruth, the perversions, the distortions of fact, and the flights of pure fiction of which the isolationists and tories of this country have been guilty prove they have learned nothing. They want to turn the clock back a hundred years; they refuse to believe the evidence of their senses; they live in a dream world of wishful thinking.

I do not believe that Hitler or the Japs would have dared to move toward world empire without the loud encouragement of Americans who refused to believe facts before their eyes.

I favored this investigation. I believed when the resolution authorizing it was brought before the House that it was necessary to bring all the facts to light to settle the issues. But I believed then, and believe now, that it could have been done better and without injection of party politics and the ghoulish vaporings of the isolationists by forming a committee of men connected with no party organization. Such a committee, composed of outstanding citizens, armed with all the powers of Congress and of right, might have brought forth the truth unadorned without exposing to world knowledge the most important secrets of our war strategy and without betraying to world gaze the brilliant accomplishments of our Army and Navy intelligence branches.

Thus far the Pearl Harbor investigation has proved only that America won a war brought upon her against all reason or desire, sprung in the secrecy of international treachery, and nourished by treason at home.

---

## Christmas 1945

REMARKS

OF

## HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. STEFAN. Mr. Speaker, this Christmastide of 1945 comes to a world still in travail. A dreadful war has been fought. The most awful struggle ever to take place between men is not yet fully concluded. The most terrible destruction in the history of the world has been wrought to no end, except to the end of the impoverishment of mankind.

It is true that madmen who had turned into marauders have been subdued at vast costs in blood and money, but nothing has been solved. No answer to the great problem has been found in war.

The greatest grief the world has ever known has been visited upon the human race. More families in the world have sad memories of lost loved ones this Christmas than ever before in the history of man.

More men, women, and little children will be cold, hungry, and shelterless this Christmas than ever before in the history of the world.

We pause to rejoice, as well we may rejoice, over the advent of Jesus of Nazareth, Prince of Peace, Advocate of Divine Love, the Herald of peace on earth to men of good will. But we must devise the way to make world peace a reality. We should have learned, yet it would seem that some in the world have not yet learned, that peace is possible only to men of good will. Progress for the human race is possible only to men of good will. The spiritual, cultural, and material enrichment of the race is possible only in an era of good will. As we ponder the numberless dead and injured, and the vast multitudes of stricken, suffering, grief-ridden people, we can be thankful that through this night of war and destruction and hatred, through this orgy of ruthless cruelty and suffering, has continued to shine that wonderful beacon beckoning to humanity to come to the way of peace—the Gospel of Jesus of Nazareth.

The great need of this world today is to be at peace. The only peace possible is that peace which is inevitable to men of good will. That is the peace which comes as we turn to Infinite God and seek our guidance there.

There is no human answer to the riddles which led to this war or to the results which have flowed from the war. There is no justice in innocent men, women, and little children being cruelly abused, pauperized, denied the merest comforts of food and shelter and clothing, to say nothing of a sense of security.

There can be no sense of security in a world filled with fear. Until the world turns back to God there will be fear, because only that love which is God can cast out fear from the hearts of men. We in America want, of course, to do our full share for the suffering peoples in other parts of the world, but we realize that sometimes it is difficult to be charitable when we would be charitable. Also, we must always remain aware of the fact that the greatest help that men of good will—that we Americans of good will—can extend to the other peoples of the world is to help them to help themselves.

If ever there was a time in the history of the world when we should follow the precepts of the Nazarene, it is in this day when the world is still convulsed with the agony of the most terrible war in history, and the fear of what may lie in a future overshadowed by the atomic bomb, and the other modern scientific engines of destruction. We need, all over the world, to practice the Golden Rule, and yet the Golden Rule needs very clearly to be understood before it can be practiced. Mercy and charity must be intelligent as well as generous, or they are apt to fail in their purpose. It is not merciful, neither is it generous to take in a wild bird or a wild beast, and teach it to become dependent upon man, and then turn it loose again after it has lost its ability to fend for itself.

It is not generous but cruel for us to make extravagant promises to the peoples of other countries which we cannot possibly keep, and to bring them only the bitter disappointment which they will feel when their hopes are dashed. Sober thought tells all of us that it is better for every individual to help himself, and to appreciate any help extended to him to help him to help himself, than it is to encourage the countless millions of men, women, and children in other parts of the world to depend upon us to rebuild their countries, reestablish and mechanize their agriculture; clothe and feed them indefinitely. There is nothing in the Christian religion that teaches us to share poverty. The whole teaching of faith in God is the kind of faith that gives us the courage to progress, and to help each other to help ourselves in our problems and our dilemmas. We will have to help feed those countries which are short of food, but it would neither be generous nor would it be sensible for us so to deplete ourselves that we would go down in ruin.

One outstanding fact of the war, one outstanding fact of 1945, one outstanding fact of 1945 years of Christianizing influence, is that free government, free economy, free society, like the American system, is the most enlightened, Christian, and practical way for men to live.

Unless we can bring an era of peace and good will between men and nations, then those boys who sleep on those lonely isles of the Pacific and those who rest in the soil of Europe will have laid down their lives in vain.

Unless we can hold to our American ideals of individual freedom, the Bill of Rights, the Constitution, a government of, by, and for the people, I think, all of the countless thousands who have died, or who have endured grievous wounds, as they laid their all upon the altar of their country, will have died or suffered in vain.

We cannot approach this Christmas season in a spirit of levity or festivity. There are vacant chairs in too many homes. There is poignant grief in too many hearts. Almost no one who lives today has not in some way been touched in his personal life by this war.

There is a great solace of which we may partake. That is in knowing that since infinite God, divine intelligence, is life, then life goes on. It is not conceivable that a God of limitless wisdom, limitless love, limitless power, limitless justice, limitless harmony could create his creatures to live and to love and to have a brief span of 60 or 70 years, and then snuff them out and consign them to utter oblivion. The human span of three score years and ten is to eternity hardly the twinkling of a star for a night. It is hardly the time between the rising and the setting of the sun. Compared to eternity, the human span of three score years and ten alone would not be worth while.

Since we know, since all logic tells us, that utter absolute nothing could not suddenly resolve itself into something causing to be a human, or a planet or a universe, then all the logic of which humans are capable, all the evidence we can cite, points to the truth that was preached and lived by Jesus of Nazareth—that God was the prime mover; and as John said, that God made all that was made and behold it was very good.

I am conscious as I speak these words to you that the age-old problem of evil again presents itself. The age-old cry comes from the depths of the heart of the world; why can these evil things seem to be rising again at this Christmastide, as we try to take firm grasp upon our faith in a God of limitless wisdom, and limitless power, in a universe of limitless justice and limitless harmony? Philosophers have found no answer to that question. I think we will never find an answer on the human plane to that question, but I am convinced, as all men must be convinced who read the Scriptures intelligently, that there is an answer, there must be an answer. I do believe, as I think all logical persons must believe, that those men and women whose human activities were snuffed out by the war still live and still progress. I believe this is so because I cannot reconcile a twinkling of human intelligence in a night of war to be the eternal purpose of an infinite God.

Of all messages of consolation, hope, good will, that we can send to the war stricken peoples of the world, the greatest message is—lift up your eyes to the stars; hold onto your faith in the goodness of God; go to the infinite Father in prayer to find the healing for your wounds and the balm for your heart's agony. You will find it nowhere else; you can find it nowhere else. You will find it there.

If there is one resolution that a stricken world ought to make this Christmastide, it is to work and strive and spend for good will instead of malice; for mutual trust instead of suspicions; for friendships instead of

hatreds; for joy in the good of others instead of envy.

At this Christmastime, in this year of 1945, we are just beyond the portals of the entrance to a new world—the world of atomic energy. Man has dared to lay his hand upon the primal force of the material universe. He has used it as an engine for destruction greater than any engine of destruction heretofore discovered. We now know that the fate of the world is linked to atomic energy. It is entirely within the control of man whether atomic energy shall be put to work to make life richer for every human on the globe than he ever could have dreamed of being before, or to have it as a threat which sometimes will wreck the world and leave a third or a fourth of the people on the planet wandering in utter desolation amid death and destruction indescribable. It seems almost grotesque that we even have to ask ourselves: Shall we make atomic energy the means by which so to enrich the lives of men that no man will need to covet that which his neighbor hath, or will we continue to use atomic energy to destroy humans on this planet?

It would seem as though the very inner impulsions of men would drive them to want to turn atomic energy to the purposes of enrichment of life. It will be sheer insanity to do otherwise.

It is a strange thing—and perhaps not so strange—that despite all the new discoveries in the realm of medicine and surgery, human suffering still goes on. In spite of all the remarkable powers of production and distribution, human want seems to shadow the lives of all too many. In spite of all of our progress in the science of jurisprudence, we seem to be getting further away from justice instead of closer to it as a nation, and in the world. In spite of our educational system, and our free system of religion, agonized humanity cries out on this Christmas, "Why, O Lord, why must we suffer so?"

The answer, the only answer, is a deep faith in God Almighty and a deep purpose of every one of us to render our utmost in human service. Happiness is to be found in no other way.

And let me add: When death finally impends; when either through the passing of the years and the slowing down of human energy, or through disease, reckless driving, starvation, privation, fear and worry, the moment of the passing arrives there will be absolutely nothing in our life that will stand us in such good stead as the knowledge that we have done our utmost to help our fellowmen while holding fast—as fast as we can hold—to our faith in God.

So then I wish for you, for everyone in the world, peace of mind, peace of spirit, the peace of good will, that peace which surpasses understanding.

And I wish for those who have gone on that progress, that widened wisdom, that will make them know that death is but the portal to a new and greater aspect of life which never ends.

May God's peace be with you.

## American "Serfs" and Professor Laski

EXTENSION OF REMARKS

OF

### HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. HOFFMAN. Mr. Speaker, from the News-Palladium of December 15, published at Benton Harbor, comes the following editorial:

Prof. Harold Laski stepped out of character just before he stepped aboard a plane for England the other day and said a good word about the United States. That was unusual, for the voluble (if unofficial) spokesman of the British Labor Party seldom says a good word in public for anything except state socialism and the Soviet Union.

Probably the professor's momentary weakness was due to a feeling of well-being which on other occasions has sweetened even sourer rebels than he. The fact was that Professor Laski had eaten well. He admitted it. He said he hadn't eaten so plenteously in years. And he was specifically enthusiastic about American ice cream.

We're glad that the professor enjoyed his food. And we are glad to learn that his gloomy view of things in general doesn't upset his digestion even though his particular reason for coming here was to make a speech scolding us for our economic sins and predicting for us a frightful comeuppance.

The professor told us Americans that "free enterprise and market economy mean war." He told us that the American form of economy is "the direct road to serfdom." He had bitter things to say about our big business and big businessmen. You'd have thought he'd be so worked up by it all that he wouldn't be able to eat a bite.

But he was, and we're sorry that he hadn't eaten well in the last few years. We know that he and his fellow Britons wouldn't have fared any better during the war under a labor government than they did under Mr. Churchill and the coalition cabinet. We know that it's not the direct fault of their national social system that millions of Frenchmen, Poles, Russians, Greeks, Italians, and others are not faring so well these days, either.

And we are not smug about our ice cream and other delicacies. But Professor Laski ought to realize that even in peacetime the American serfs were also eating pretty well. Not always as well as they should, some of them, but better than almost all their neighbors in the world.

Much of the time their innards have felt as well as Professor Laski's did after a few days of American table d'hote. And it has always been hard to convince them, feeling that way, that their economic system was grinding them down to slavery and leading them to war. Even the most earnest radical is likely to doze off when he attempts to take a heavy Marxian harangue on top of a full stomach.

Incidentally, while Professor Laski was over here telling us what a moribund institution the American system is, the British financial commission was in Washington negotiating a $4,000,000,000 loan and also getting $26,000,000,000 in lend-lease to Britain written off by our Treasury as just another experiment in another world war which we never started and for which we have sacrificed a quarter of a million American lives, to say nothing of having accumulated a national debt that will burden the American people for generations to come. How do they get away with it?

Mr. Speaker, permit me to ask not only how do they get away with it, but how do the American advocates of unlimited gifts to foreign nations, get away with it? Perhaps one answer is that we have always been so prosperous, always as a people had so much for ourselves, that we think the supply is unlimited and that indefinitely and always we can give and give without in any way impairing our own ability to produce, restrict our own opportunity to have.

## Problems of Naval Justice

EXTENSION OF REMARKS

OF

### HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered on December 19, 1945, at the section of criminal law of the American Bar Association in Cincinnati, Ohio, by Rear Adm. O. S. Colclough, Judge Advocate General of the Navy on the subject Problems of Naval Justice:

Mr. Chairman, members of the criminal law section of the American Bar Association, it is indeed an honor to be invited to speak to you. In that invitation I see an active interest in the administration of justice within your Navy. That is as it should be, in my opinion.

We in the Navy Department, and in my office particularly, have ample evidence of the increased interest in the Navy's court-martial procedures and in the disciplinary processes that follow conviction before a court-martial. Members of Congress through their constituents, and citizens in general throughout the country, have felt the impact of military law in greatly increased numbers as a result of the recent, greatest of all wars. This is so for the reason that never before in our history have so many of its men and women served at one time in the armed services and hence been subject to the Articles of War and the Articles for the Government of the Navy. These are two basic statutes which the Congress enacted years ago under the power to it given by the fourteenth clause of section 8, article I of the Constitution: "To make rules for the government and regulation of the land and naval forces."

The administration of justice in the Navy falls generally into two broad subdivisions—the application of military law to the maintenance of a high standard of discipline; and secondly, the application of sound principles of administrative discipline. The objective of the entire system is the same. In other words, a proper standard of discipline in war and peace is the hallmark of an efficient, successful, yes, victorious Navy. History testifies to the dire results that have come to military and naval forces that were unable, for one reason or another, to maintain this high standard.

I am addressing myself to the first of the two phases of the problem of the administration of justice, that of the practice of military law, although I am aware that the problems of administrative discipline is of equal importance, and is a topic of discussion set down for this meeting. Present this afternoon are other representatives of the Navy Department, better qualified than I to discuss it.

As many of you are aware, no doubt, the tribunals before which those who violate military laws are tried, namely, courts martial, are not parts of the judicial organization of the United States. There are some basic differences in procedure. For example, the fifth amendment to the Constitution excepts cases arising in the land or naval forces from the requirement as to presentment or indictment of a grand jury. Again, it has never been questioned that the sixth amendment does not require a trial jury in a court martial. The decisions of these tribunals, acting within their jurisdiction, both as to parties and the subject matter, are not subject to review by the civil courts.

In pointing out the status of military law, and its instrument of enforcement, courts martial, I do not want to be understood as suggesting a legal philosophy to the effect that naval personnel are hereby deprived of the constitutional guaranties. My purpose in making brief reference to these fundamental precepts is only to invite your attention to the necessity, in approaching the problem of the practice and procedures of military law, of keeping clearly in mind that this branch of the law is an adaptation of our basic principles of justice to the exacting formula of military discipline.

Before discussing present thinking with respect to our court-martial procedure, it may be of interest to you to have a quick résumé of the structure of our courts.

What might be termed the court of first instance is, in fact, not a court at all. It is the commanding officer's mast. In addition to investigating alleged offenses at most, to determine if further proceedings should be had, the commanding officer is empowered to prescribe certain punishments, such as limited confinement, extra duties, and deprivation of liberty for minor offenders. Next, a deck court is composed of one officer who arraigns the accused, examines the witnesses, and upon finding the specification—as the pleading is known—proved, passes sentence. Before trial by deck court the accused must agree thereto in writing. If he does not assent, he is brought to trial before a summary court martial which is a three-officer court, with a recorder to conduct the prosecution. The authority to convene deck and summary courts is vested in the commanding officer of a naval vessel and certain other officers in command, as prescribed by law or as specifically empowered by the Secretary of the Navy.

In the event that the commanding officer considers an alleged offense of sufficient gravity to deserve greater punishment than a summary court martial is empowered to prescribe, he recommends to the nearest naval official authorized to convene general courts martial that the accused be brought to trial before this highest tribunal, upon specific charges. Furthermore, general courts martial have exclusive jurisdiction over officers and in practice of certain major offenses.

A general court martial is composed of not less than 5 nor more than 13 officers, with a judge advocate to summon witnesses, conduct the prosecution, maintain the record, and advise the court of matters of law when requested. In peace, the punishments which can be awarded are limited with respect to specific charges by a schedule approved by the President. In war, these limitations are not applicable.

In all cases of trial by court martial the accused is provided with counsel of his own choice if the exigencies of the service permit. If this cannot be done, or the accused is unable to procure counsel, the convening authority will assign defense counsel upon request. Finally, if the accused is not represented by counsel, it is the duty of the recorder or judge advocate to protect his rights.

Prior to the last war the Navy's strength, including the Marine Corps, was about 330,000 men and officers. This represented a threefold increase in the 5 years preceding the war. The average monthly figure for courts martial of all types was then about 625. The naval population rose during the war to a figure in excess of 4,000,000, including the Coast Guard as well as the marines. The monthly average figure for courts martial for the war was nearly 14,000, with a peak of 20,000. I cite these figures to illustrate the magnitude of the problem.

From a geographical standpoint, prior to the war the administration of naval justice was roughly limited to the United States and its Territories, Cuba, Iceland, and the Philippines. When you consider that during the war it embraced not only Europe, the Atlantic, and the Pacific, but practically the entire world, you will recognize that the Navy was confronted, in addition to the tremendous problem of logistics for ships, aircraft, and amphibious forces, to a real problem of the logistics of naval justice under heavy stress and strain.

I am able to report that the administration of naval justice during this trying period is a source of satisfaction. In saying this I do not refer to myself, for I have only recently become Judge Advocate General and, in fact, was not a part of the organization charged with administration of naval justice during the war.

I do not mean to say that there were no cases of injustice. Such a claim would be absurd on its face. Navy courts are composed of human beings, and I need not tell you who have practiced criminal law that the problems of personalities and temperaments enter into such matters. There is direct evidence, however, of the success of our disciplinary processes. Not only did your naval forces attain a victory which bespeaks their discipline and morale, but a very practical yardstick is the fact that the percentage of naval prisoners rose only from the figure .173 in the prewar period to .183 during the war. This increase, I maintain, is insignificant when considered with the fact that during war the population of the Navy consists in a great measure of men who have not dedicated their lives to the naval service, who were not even volunteers, and hence might be expected to be less amenable to those limitations upon their personal freedoms which a military service must impose.

I would be less than just if, in taking credit unto the Navy, I failed to give credit also to you, who together with your sons, brothers, daughters, and sisters demonstrated again the magnificence of American character and its innate sense of fairness, justice, and patriotism. The magnitude and complexity of the problems in naval justice which this war brought forth can now be subjected to scrutiny. That is being done. Immediately upon the conclusion of the war, at the direction of the Secretary of the Navy, a realistic search was instituted to discover any weak links in the chain of naval justice, with a view to strengthening them. Research into our own system and comparisons with the systems of other navies was undertaken. The Secretary appointed a very able committee, headed by Mr. Justice McGuire, of the United States District Court for the District of Columbia, which has submitted a comprehensive report.

The Judge Advocate General, my predecessor, obtained the services of a Naval Reserve officer, whose wide experience in the Navy as a priest and fleet chaplain and an equally broad experience in the law gave him a viewpoint of unusual scope. Commodore White, of the Navy Chaplain Corps, in peace the dean of the Catholic University Law School, in addition to assisting my office in the study of the basic articles for the government of the Navy, has made some valuable studies of the actual operation of naval justice by interviewing prisoners who have felt the full force of military law and its procedures.

Recently the Secretary has appointed a larger committee, headed by Mr. Arthur Ballantine, of New York, on which Mr. Justice McGuire, among others, will serve. This committee will meet shortly to consider the McGuire report and the recommendations thereon of responsible officials in the Navy Department.

Out of all this we confidently hope will come a draft revision of the Articles for the Government of the Navy which the Secretary of the Navy will find acceptable to submit to the Congress in a matter of months. Needless to say, a revision of these articles will be followed by a revision of the naval law manual, now called Naval Courts and Boards, which prescribes the rules of pleading and procedure.

I am not able at this time to be specific as to the details of any reforms to be expected from the extensive studies which are continuing. It seems certain, however, that in addition to a general streamlining, if I may use that term, of the articles, there will be a clearer specification of offenses, express provisions of the Bill of Rights will be spelled out, insofar as they are adaptable to the organization and operation of the Navy, the duties of judge advocate and prosecutor will be separated, or some equally effective method of assuring adequate legal advice to the court. In this connection I hope to institute a system of legal education for a sufficient number of naval officers to enable them to deal efficiently with military law, particularly the technique of pleadings and the rules of evidence.

Another phase of the problem which has been, and is now, receiving attention is the attainment of better uniformity of sentences. I feel sure that extension of the principle of review boards, which can approach this subject objectively, will be adopted.

There is a modern, healthy trend toward overhauling legal procedures without derogating from our concept of protection of the rights of the individual—in fact, strengthening that concept wherever that appears necessary or even desirable. The examination and studies presently being made, as I have roughly described, is in keeping with this trend.

You will note that I call it a modern trend and, if judged by tangible results, it is so, for I point to the fact that only now, after years of study and consideration, are we coming, in the civil courts, to such reforms as the Federal rules of criminal procedure, the substitution of an information for the cumbersome procedure of indictment by grand jury, and the adoption of pretrial procedure.

It may not be immediately apparent to some why the Navy does not follow without modification the trend of our criminal practice. I mentioned earlier that our problem is not quite the same. While the purposes to be served by criminal courts and the Navy's disciplinary system differ, the fundamentals are the same. Law in the military services, as elsewhere, is a vital aspect of the problem of human relations. Although military law is only one aspect of the human relations in the Navy, human conduct is the sole concern of that body of the law, as it is of criminal law with respect to civilians.

We are striving to perfect our system of justice in the Navy. In that effort, as in other fields of the law, human relations—including the rights of the individual—are complex matters. To balance those conflicting claims in such a way as to secure protection for the rights of the individual and to safeguard the interests of morale and discipline of a military organization—all that requires intensive study and a high degree of understanding, not solely by the legal profession, not solely by the military profes-

sion, but by an intelligent combination of the two. That is our objective, to the end that the high tradition of American justice in the United States Navy shall be sustained and strengthened.

## Medical Corps in the Veterans' Administration

EXTENSION OF REMARKS

OF

### HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. RANKIN. Mr. Speaker, on yesterday the Senate passed House bill 4717, "An act to establish a Department of Medicine and Surgery in the Veterans' Administration," without amendment. We passed it here several days ago. The measure now goes to the White House and I am sure it will be signed by the President today or tomorrow.

This bill has been enacted to meet an urgent need of the Veterans' Administration for satisfactory organization of the medical activities and to attract necessary personnel, particularly doctors, dentists, nurses, and attendants. Legislation to accomplish this general purpose with the approval, in principle, of the President was recommended by both General Hines and General Bradley as being essential and vital. The act abolishes the Medical Service in the Veterans' Administration as at present constituted and establishes in its stead a Department of Medicine and Surgery under a Chief Medical Director.

The bill incorporates broad provisions as to organization and authority. It provides specifically for certain positions with adequate salary stipulations, specified salary rates for doctors, nurses, and dentists, and a special salary range for attendants. It authorizes appointments by the Administrator of Veterans' Affairs to certain professional positions without regard to civil service. The civil-service retirement system, however, will be applicable to all positions in the Department of Medicine and Surgery. Authority is provided to discipline or discharge unsatisfactory or disqualified employees in certain categories without the restrictions of the laws and regulations pertaining to civil service.

EXPLANATION OF THE BILL

Section 1 of the bill, in addition to abolishing the Medical Service in the Veterans' Administration and establishing in its stead a Department of Medicine and Surgery under a Chief Medical Director, provides that the functions of that Department will be those necessary for a complete medical and hospital service to be prescribed by the Administrator of Veterans' Affairs.

Section 2 of the bill provides that the Department of Medicine and Surgery shall include the office of the Chief Medical Director, Medical Service, Dental Service, Nursing Service, and Auxiliary Service.

Section 3 of the bill provides that the office of the Chief Medical Director shall consist of the Chief Medical Director, one Deputy Medical Director, not to exceed eight Assistant Medical Directors, and such other personnel and employees as may be authorized by the act. The Chief Medical Director will be appointed by the Administrator at a salary of $12,000 per year; the Assistant Medical Directors will receive a salary of $11,000 per year each, and the Deputy Medical Director will receive a salary of $11,500 per year; the Director of the Nursing Service will be paid a salary of $8,000 per year and the Deputy Director of Nursing Service will receive a salary of $7,000 per year. The chief pharmacist, chief dietitian, chief physical therapist, and chief occupational therapist each will receive a salary of $6,000 per year. The appointments will be for a period of 4 years, subject to removal by the Administrator for cause. Reappointments may be made for successive like periods.

Section 4 provides for appointment by the Administrator of additional personnel in two groups: (a) doctors, dentists, and nurses; (b) managers, pharmacists, physical therapists, occupational therapists, dietitians, and scientific personnel and other medical and dental technologists.

Section 5 prescribes the conditions of eligibility for appointment to the Department of Medicine and Surgery. The first requirement is that any person so appointed must be a citizen of the United States. There are then provided the professional and other requirements for doctors, dentists, and nurses; and in the auxiliary service—managers of hospitals, homes or centers—pharmacists, physical therapists, occupational therapists, dietitians, and other auxiliary employees. It is provided that persons may be appointed under the act while on terminal leave from the armed forces and may be paid for their services rendered under such appointment notwithstanding any law or regulation to the contrary.

Section 6 provides that the appointments of doctors, dentists, and nurses shall be made only after their qualifications have been satisfactorily established in accordance with regulations prescribed by the Administrator and without regard to civil-service requirements. There is provided a probationary period of 3 years with provision for review of the employment records and separation from the medical, dental, or nursing services if the person is found not fully qualified and satisfactory. Provision is made for promotion of doctors, dentists, and nurses on the basis of examinations, and automatic promotion may be made within grade. Doctors, dentists, and nurses in the present medical service will be continued in their present positions until their qualifications are determined. Civil-service reinstatement rights are protected in the cases of those who at time of appointment have a civil-service status and whose employment in the Department is not continued.

Section 7 establishes the grades and per annum full-pay ranges for positions of doctors, dentists, and nurses. The Administrator is authorized to prescribe by regulation the hours and conditions of employment and leaves of absence of doctors, dentists, and nurses.

Section 8 authorizes the Chief Medical Director to rate any qualified doctor appointed under section 4, subsection (a), as a medical or surgical specialist, but no person may at any one time hold more than one such rating. It provides the conditions under which such rating shall be granted, its duration, and that the person so rated shall receive, in addition to his basic pay an allowance equal to 25 percent of such pay, but the pay plus the allowance may not exceed $11,000 per annum.

Section 9 provides that persons appointed to the Department of Medicine and Surgery shall be subject to the provisions and entitled to benefits under the Civil Service Retirement Act, as amended.

Section 10 provides for disciplinary boards and action on their recommendations affecting doctors, dentists, and nurses under section 4, subsection (a).

Section 11 provides for appointment of additional employees, other than those specified in section 3, subsection (a) of section 4, and section 14 of the act, as may be necessary. It is provided that employees in the Medical Service, as at present constituted, other than those provided in section 3, subsection (a) of section 4, and section 14, shall receive original appointments to the Department of Medicine and Surgery in their present civil-service status upon proper certification therein provided. This section also provides that the per annum salary range for attendants shall be $1,572 minimum to $1,902 maximum.

Section 12 provides for a special medical advisory group, its composition and functions. Provision is made for regular calendar quarterly meetings and for the number, terms of service, compensation, and allowances to members.

Section 13 provides for the detail by the Chief Medical Director of employees under section 3 and subsection (a) of section 4 to attend meetings of associations for promotion of medical and related sciences. Authority is granted to place employees coming under the foregoing sections on duty for a period not in excess of 90 days in schools of the Army, Navy, and Public Health Service, and in civil institutions with the consent of authorities concerned, for the purpose of increasing professional knowledge or technical training. Payment of necessary expenses is authorized. Any person authorized to attend such course will be required to reimburse the Veterans' Administration the expenses thereof if he voluntarily leaves the service within 2 years after the completion of such course.

Section 14 provides for employment by the Administrator, upon recommendation of the Chief Medical Director, and without regard to the Classification Act of 1923, as amended, of doctors, dentists, and nurses on a temporary full-time, part-time, or fee basis, and others on a temporary full-time or part-time basis, at such rates of pay as he may prescribe, but no temporary full-time appointment

shall be made for a period of more than 90 days.

This section also authorizes the establishment of residencies and appointment to such positions without regard to civil service or classification laws, rules, or regulations; the conditions of such employment; and the customary amounts and terms of pay during the period of such training. Residency training in most specialties would embrace training outside the hospital in connection with the school, part of the time not being spent on work directly productive for the Veterans' Administration. This authority is granted in order to retain uniformity with actual practice throughout the United States in connection with residency employment because the average pay scales in residency employment are less than the scale for a minimum entrance salary of positions, such as doctor, junior grade.

Section 15 provides that the Chief Medical Director, with the approval of the Administrator, unless specifically otherwise provided, shall promulgate all regulations necessary to the administration of the Department of Medicine and Surgery and consistent with existing law, including regulations relating to travel, transportation of household goods and effects, and deductions from pay for quarters and subsistence; and to the custody, use, and preservation of the records, papers, and property of the Department.

## Activities of the Civil Aeronautics Board

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement on activities of the Civil Aeronautics Board signed by various Members of the Senate and House:

Whereas 18 Senators from 11 Western States have written to the Civil Aeronautics Board urging it not to adopt the recommendation of its own official examiners that an air route to the Orient be established from Chicago via the Twin Cities and Alaska, and urging it to establish the route via the Pacific Northwest; and

Whereas this letter was sent to the Civil Aeronautics Board when it had the matter before it for decision more than a month after it had completed all proper procedural steps including extended public hearings, an official report by the Board's examiners recommending the Twin Cities route, service of the report on all interested parties, an opportunity for them to file exceptions and briefs opposing the recommendation, and then opportunity to present oral arguments before the full Board; and

Whereas we believe such action by the above-mentioned Senators constitutes interference in the proper functioning of the Civil Aeronautics Board which was established by the Congress to be an independent quasi judicial agency, and attempts to influence its decisions not by presentation of evidence in the proper manner but by powerful political pressure; and

Whereas such action jeopardizes the independence and integrity of the Board and will inevitably lead to loss of confidence in the unbiased character of its decisions:

Therefore, we Senators and Representatives feel compelled to protest publicly against this attempt by political pressure to influence the Civil Aeronautics Board to disregard the recommendation of its own examiners that the first air route to the Orient be established via the Twin Cities and Alaska, and

We hereby send copies of this statement to the press and to the Civil Aeronautics Board.

Senators: JOSEPH H. BALL, HENRIK SHIPSTEAD; Representatives: H. CARL ANDERSEN, AUGUST H. ANDRESEN, WILLIAM J. GALLAGHER, THOMAS S. GORDON, HAROLD C. HAGEN, ROBERT K. HENRY, WALTER H. JUDD, FRANK B. KEEFE, HAROLD KNUTSON, WILLIAM LEMKE, KARL E. MUNDT, JOSEPH P. O'HARA, ALVIN E. O'KONSKI, W. A. PITTENGER, CHARLES R. ROBERTSON, FRANK STARKEY, KARL STEFAN.

## OPA's Rent Set-Up Fails To Consider Local Problems

EXTENSION OF REMARKS
OF
### HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. BATES of Massachusetts. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a newspaper article from the Haverhill Gazette bearing on a recent survey which has been conducted on the housing shortage in that city. This survey was made by one of the key reporters as the result of a tremendous amount of public interest in the housing problem of that community. I inserted in yesterday's RECORD the first installment of this report, which has much to say in respect to the contribution that is being made to the housing problem by the unwise administration of the rent-control law. The rent-control law, during the national emergency, has played an effective part in stabilizing the rent situation throughout the country. Members of Congress, however, fully realize that in the administration of such a law that some hardship cases would develop that would need special attention. Congress, therefore, recognizing the need of adjusting rents to these special conditions, amended the rent-control law and inserted language that would permit a good deal of flexibility where the situation justified such action by the Rent Administrator. I am sorry to say, however, that proper consideration is not being given to these hardship cases, and the results are that the housing shortage is being further aggravated because of the unwillingness of the property owners to invest money in remodelling and otherwise bring about substantial repairs, where the administrators of the rent-control law refuse to let them know ahead of time the amount of rent they can charge and which would give them an opportunity to meet the expenses of such remodeling and permit, at the same time, a reasonable amount for profit.

I feel sure that the accompanying article, which I am inserting in the RECORD today, is written entirely from an unbiased standpoint and printed by one of our most reliable papers in the eastern area of the country. I trust that those in charge of the administration of rent control will see the error of their way and will show a cooperation in working out the problems of our property owners so that additional housing facilities will be provided at the earliest opportunity. It is such criticism as we find in this report on the administration of the rent control law that is responsible for the growing demands that Congress should do something about it. I feel certain that unless an improvement is made in such administration that Congress will at an early date take action to the end that the abuses in the administration of this law will be corrected.

OPA'S RENT SET-UP FAILS TO CONSIDER LOCAL PROBLEMS

(By Milton E. Connelly)

(EDITOR'S NOTE.—In Haverhill, as in nearly all parts of the country, one of the most serious problems is the housing shortage. There are several elements in this problem—shortage of materials, scarcity of labor, high cost, zoning, rent-control policies. The Gazette presents today the second of a series of articles on the element of rent control, a part of the general problem that is not talked about so much as other parts but one that must be solved and that can be solved.)

Haverhill had almost as many vacancies as occupancies in 1942 when OPA applied rent control, catching the city with its rents down and tying them with regulations made for places where homes were scarce.

If this policy is continued, and OPA's regional office in Boston has given no indication of a change, Haverhill will have to wait until conditions improve in 6 other cities and 27 towns before controls will be relaxed to let them improve here.

This policy creates a Federal control without enough consideration of local needs. It is causing concern among Haverhill businessmen, who are interested in ending housing shortage. The policy, they say, must be changed to help this city to solve its own problem.

The Gazette has gone down the line in talking to rent-control administrators. Its representative has interviewed William H. McCarty, director of the Essex County area rent control office; Edgar J. Driscoll, regional rent executive for New England; and public-relations officers in the Washington home office of OPA.

ATTITUDE TOWARD CONTROL

Interviews with OPA directors shows they think everyone who owns property is against rent control. Interviews with businessmen here and elsewhere prove this opinion in error.

A survey has shown that investors, realtors, and some landlords, as well as the big majority of tenants, agree with OPA that rents, which, next to food, make the biggest hole in the average American's pocketbook and should be controlled during wartime to protect families of servicemen from evictions and from too high costs.

The interviews also showed rent-control directors have not recognized the people complaining are not against control but against strict hewing to the line on directives without regard for circumstances.

Take, for example, the rent freeze in Haverhill in March 1942, when city rents were at a low point. The area rent office knew this, admitted it at protest meetings, but gave no relief. The office asked Haverhill men to show a loss on their property by comparing 1942 income with that in 1939, 1940, and 1941. They couldn't show a profit even in those years because rents were still subnormal. They might have if OPA had left them go back further, but OPA said 1939 was as far as they could go.

ONE MAN'S EXPERIENCE

Take another case, for example. A businessman bought a home for his own occupancy a year ago. A friend pleaded with him to rent it and set a price. The businessman agreed, reluctantly. The friend was a tenant for 6 months when the businessman learned, not from OPA but from another friend, that he should have registered the rent in Lynn. He wanted to obey the law and he registered. When he did, OPA investigated. His rent charge was cut $15 a month and he was forced to refund $90 to a tenant who didn't want the money.

There are many similar examples. There are others where rent control has refused to give a landlord possession of a tenement because of unsanitary conditions; where tenants have tricked innocent landlords into making repairs with the knowledge the extra rent they promised to pay would never have to be paid; where tenants have slipped landlords premiums for rentals, or, in other words, gone into the black market for rentals; where tenants who have rented the same house or apartment for years have been sold out by landlords who reaped a profit from the sale of the property.

The area rent-control office will admit some of these conditions but say the law is there and there is nothing that can be done about it. The regional office will concur in that opinion. And the home office tells the same story.

But the offices overlook the fact that in 1943 a special congressional committee set up by the House to investigate rent control, and headed by Representative HOWARD E. SMITH (Democrat, Virginia), held, in its report to the House, that there was elasticity in rent control.

RENT-CONTROL BASIS

The Smith committee pointed out, in effect, that rent control was to be set up on a fair and equitable basis, which meant making it flexible enough to meet different conditions. It charged, too, that the rent control administration had not consulted local advisory groups as suggested but had continued to follow directives too strictly.

Area Director McCarty and Regional Director Driscoll said there was nothing to be done about Haverhill's condition in 1942, when rents were frozen at a low level. McCarty said the situation was studied and a rent expert brought on from Washington, who described the condition here the same as it was in several other places.

Driscoll said Haverhill couldn't be left out from under the rent blanket for if it had, people would have been able to commute from here to Lawrence and the rent-control program would have been defeated.

There was no explanation of commuting from here to New Hampshire, which was not controlled by Essex County. There were no figures available to show an exodus from rent-controlled Essex County to other areas.

There was no explanation for the lack of knowledge property owners had of existing rules, especially registering new rents and increasing rents. Area and regional officers said there had been much newspaper publicity and radio talks and that if people didn't read the papers or listen to the radio, there was nothing they could do nor adjustments they could make, except adjustments permitted by regulations.

THE OPA THEORY

The general OPA theory during interviews in Lynn, Boston, and Washington was that rent control must be continued under its present set-up even though it was a war measure to protect war workers and families of servicemen and the problem now is not the wartime one of protecting homes but the peacetime one of providing more of them.

Rent control men have sold themselves on two points: (1) rent control is necessary to keep rents from skyrocketing; and (2) rent control is not delaying the construction program needed to meet the housing shortage.

There seems to be no dispute on the first point. Most advocates of change admit the needs, for the present at least, of continuing controls.

The challenge to OPA comes on the second point.

When asked to show what OPA was doing to help solve the housing situation, Regional Director Driscoll quickly pointed to the November directive for increases on new rentals and new conversions, taking into consideration increased material and labor costs.

"In effect this means at 20-percent rise on new homes and new conversions, taking into consideration increased material and labor costs.

"In effect this means a 20-percent rise on new homes and new conversions," he said, "for the maximum allowance will reach to about that point although it has not been set up on a percentage basis. We will examine plans and set up rents for prospective builders."

Advantages of the November directive are debatable.

LIMITED IN ITS EFFECT

In the first place, it applies only to new construction and new conversion. It will not help the present landlord to make repairs to his property already rented nor will it increase his incentive to invest in more real-estate holdings.

Although Driscoll mentioned a maximum of about 20 percent, the directive itself did not, for it said new rents shall be set on the basis of comparability plus increased costs. It did not mention a change in the March 1, 1942, basis for comparability over which Haverhill is vitally concerned and while an increase to the maximum of about 20 percent in another city, where rents were reasonably profitable when the 1942 freeze was made, might help, it does not hold that such a maximum would ease the Haverhill situation.

There was no hope held out in the directive that the pressing need of rent control would be met, namely, getting the entire program on a community or individual basis instead of continuing remote control under the present county or blanket basis.

Pressed for an answer on this point, which OPA could use as a progressive step to meet what is now a peacetime problem—a housing shortage—by creating local advisory boards to not only study but recommend specific relaxations and modifications to reach the objective of de-control, Driscoll said he couldn't give an answer because he did not have authority.

The Lynn office said it has been doing all it could to meet the acute housing situation by cooperating with agencies to help find homes for veterans and by putting the November directive in effect.

The Washington office's public relations department had a different answer to the question of rent control's effect on the existing shortage. It was: "Nothing. Anyone who says that should think first about the material and labor shortages."

## CIO Appeal to British Startles Washington

EXTENSION OF REMARKS

OF

## HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Arthur Sears Henning:

CIO APPEAL TO BRITISH STARTLES WASHINGTON

(By Arthur Sears Henning)

The CIO Auto Workers' appeal to the Socialist British Government to intervene in the General Motors strike as the owner of a large block of General Motors stock startled official Washington.

The spectacle of the politically most powerful labor union in the United States invoking the aid of another country in the economic warfare it is waging seemed to many Senators and Representatives to be fraught with ominous implications and possibilities.

HAVE COMMUNIST SUPPORT

The CIO already has enlisted the support of the Communist Russian Government, which is exerted through the American Communist Party and the Communist and fellow traveler front organizations and press. It now seeks the influence of the British Government exercised through stock ownership in American corporations.

These holdings are of vast but unknown extent. In the single case of a loan of $390,000,000 obtained by the British Government from the RFC the collateral furnished consisted of British-owned stocks in 189 American companies now valued at $775,000,000.

This new development is likely to figure prominently in the consideration by Congress of the pending proposal to loan $4,000,000,000 to Great Britain for 55 years at 1.6 percent interest.

THOMAS WRITES ATTLEE

The appeal to the British Government to take a hand in the General Motors strike was contained in a letter addressed by R. J. Thomas, president of the CIO United Auto Workers to British Prime Minister Attlee. By way of combatting the corporation's rejection of the union demand to base a wage increase on prospective profits Thomas urged the British Labor Government as "a substantial owner of General Motors shares" to "make known to the management of General Motors Corporation your belief that profits are indeed the concern of the workers and the owners of any company." The British holding in General Motors is 434,000 shares.

Senator MOORE, Republican, of Oklahoma, who recently presented in the Senate the details of the collateral for the RFC loan, admitted that he had been startled by the import of the Thomas appeal to the Socialist Prime Minister.

"It is certainly out of place," said Representative REED, Republican, of Illinois, "to appeal to an official of a foreign government to settle a purely domestic American issue. I can't help but think of this situation in reverse. What would be the feeling of the British people if their Government asked President Truman to intervene in a purely British issue?"

IDEA CALLED FANTASTIC

"This is fantastic," said Representative SPRINGER, Republican, of Indiana, "it is indeed strange that Prime Minister Attlee

should be asked to take an interest in settling a matter that concerns only the United States."

In addition to the 434,000 General Motors shares, the British holdings include: American Thread, 1,197,375; Distillers Co., Ltd., 85,250; Shell Union Oil, 900,000; Standard Oil of Indiana, 315,000; Radio Corporation of America, 177,000; Dividend Shares, Inc., 3,665,550; Celanese Corp., 335,096; Standard Oil of New Jersey, 198,002; Amerada Petroleum Corp., 133,000; American Rolling Mills, 133,000; Socony-Vacuum Oil Co., 130,000; Standard Brands, 170,000; F. W. Woolworth Co., 247,000; U. S. Potash, 162,480; American Association, 151,844; Dunlop Tire & Rubber Co. 197,334; J. & P. Coates (R. I.), 144,991; Clark Thread Co., 179,991; Dentist Supply Co., 100,765; Newark Fire Insurance Co., 398,436; Eureka Security Fire & Marine Insurance Co., 199,994; Monarch Fire Insurance Co., 102,154.

## Amendment to Public Law 134, To Provide Annual and Sick Leave for Classified Substitute Employees

EXTENSION OF REMARKS
OF

### HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. ANGELL. Mr. Speaker, I am introducing today a bill which amends section 6 of the act of July 6, 1945—Public Law 134, Seventy-ninth Congress—to provide that war-service substitutes shall be granted annual and sick leave. The amendment is short and reads as follows:

*Be it enacted, etc.*, That section 6 of the act of July 6, 1945, Public Law 134, Seventy-ninth Congress, is amended to read:

"SEC. 6. Postmasters and employees shall be granted 15 days' leave of absence with pay, exclusive of Saturdays, Sundays, and holidays, each fiscal year and sick leave with pay at the rate of 10 days a year, exclusive of Saturdays, Sundays, and holidays, to be cumulative. Sick leave shall be granted only upon satisfactory evidence of illness in accordance with regulations to be prescribed by the Postmaster General: *Provided*, That the 15 days' leave shall be credited at the rate of 1¼ days for each month of actual service: *Provided further*, That classified substitute employees and those substitutes appointed for the duration of the war or for a longer period shall be granted, under such regulations as the Postmaster General may prescribe, the same rights and benefits with respect to annual and sick leave that accrue to regular employees in proportion to the time employed in a pay status and 168 hours and 40 minutes of such employment shall entitled the employee to 1¼ days' annual leave and 6 hours and 40 minutes' sick leave: *And provided further*, That in no event shall a classification substitute employee or a substitute appointed for the duration of the war or a longer period be credited during a 12-month period with more than 15 days' annual and 10 days' sick leave."

Mr. Speaker, it was drawn to my attention that the existing law had been interpreted to deprive war service substitutes from participating in annual and sick leave as provided by Public Law 134, and there would seem to be no just reason why this should be done. I took the matter up with the United States Civil Service Commission and was advised that the Commission entertained the same views, believing that this unjust discrimination should be corrected. I ask the Civil Service Commission to submit to me a proposed draft of an amendment which would obviate this injustice and the bill I am introducing is in the language as proposed by the Commission.

I include as a part of these remarks a letter which I received from William C. Hull, Executive Assistant, United State Civil Service Commission, dated November 23, 1945, in which is discussed the interpretation which makes this amendment necessary. The letter is as follows:

UNITED STATES CIVIL
SERVICE COMMISSION,
*Washington, D. C., November 23, 1945.*

Hon. HOMER D. ANGELL,
*House of Representatives.*

DEAR MR. ANGELL: I have your letter of November 5, 1945, in furtherance of our telephone conversation regarding the denial of leave privileges to war-service appointees in the postal service which was brought to your attention by Virginia E. Carr and Nella J. Nelson, of the Portland (Oreg.) Post Office.

Admittedly the situation is unfortunate and for your information may be explained as follows:

The act of April 30, 1940 (54 Stat. 171), which governed the granting of annual and sick leave to substitutes in the postal service prior to the Postal Reclassification Act (Public Law 134, 79th Cong., approved July 6, 1945), reads in part as follows:

"That hereafter substitutes in the postal service shall be rated as employees and such substitute postal employee in the classified civil service shall be granted the same rights and benefits with respect to annual and sick leave that accrue to regular employees in proportion to the time actually employed."

Following a decision of the Comptroller General dated July 15, 1944 (B-43138), the Commission was requested by the Post Office Department to determine whether or not war-service substitute employees are considered as "in the classified civil service" within the meaning of the act of April 30, 1940. The Department was advised on January 29, 1945, that the Commission has uniformly held that Executive Order 9063, under which war-service appointments are made, did not take the positions affected thereby out of the competitive classified civil service, but that by reason of the provisions of section 2 of the order the persons appointed solely by reason of any special procedures adopted under the order, to positions subject to the Civil Service Act and Rules would not thereby acquire a classified civil-service status. Although the appointments of war-service appointees are limited to the duration of the war and 6 months thereafter, such appointees are incumbents of positions which continue to be in the competitive classified civil service. It was stated to be the view of the Commission that substitute postal employees who received war-service appointments were incumbents of positions in the competitive classified civil service and were therefore entitled to earn leave within the meaning of the act of April 30, 1940, referred to above.

Section 6 of the act of July 6, 1945 (Public Law 134, 79th Cong.) superseded the act of April 30, 1940, by granting leave to substitute employees in the following language:

"*Provided further*, That classified substitute employees, under such regulations as the Postmaster General may prescribe, shall be granted the same rights and benefits with respect to annual and sick leave that accrue to regular employeer in proportion to the time employed in a pay status * * *: *And provided further*, That in no event shall a classified substitute employee be credited during a 12-month period with more than 15 days' annual and 10 days' sick leave."

It will be observed that the new law granted leave only to "classified substitute employees." Under date of August 27, 1945, the Post Office Department requested the Commission to determine whether war-service substitute employees may be regarded as "classified substitutes" within the meaning of the new law (Public Law 134). Although the Commission does not control the granting of leave to postal employees, it does have authority to determine whether or not particular groups of employees have a classified civil-service status. It was for this purpose alone that the matter of leave for substitute employees was referred to the Commission for an interpretation of the term "classified substitute" as it appears in the law.

The Commission was authorized by Executive Order 9063, February 16, 1942, to adopt special procedures to govern appointments during the war period. Section 2 of this order specifically provided that "persons appointed solely by reason of any special procedures adopted under authority of this order to positions subject to the Civil Service Act and Rules shall not thereby acquire a classified (competitive) civil-service status, but in the discretion of the Civil Service Commission, may be retained for the duration of the war and for 6 months thereafter."

The term "classified substitute," as used by the Commission and the Post Office Department for many years, means a substitute with a competitive classified civil-service status. Inasmuch as section 2 of Executive Order 9063 specifically provided that appointees shall not acquire a competitive classified civil-service status, war-service substitutes of the Postal Service cannot be regarded as classified substitutes.

In response to the Department's request to be advised whether war-service substitute employees may be regarded as classified substitutes within the meaning of section 6 of Public Law 134, on September 12, 1945, the Commission advised the Department as follows:

"A careful study has been made of the legislative history of Public Law 134, approved July 6, 1945, but nothing has been found to indicate the reason for the change in the leave law applicable to substitute employees. The Department, no doubt, has information concerning the purpose of the change in the law which is not available to the Commission. Regardless of the purpose in changing the leave law applicable to substitute postal employees, the fact remains that the new statute governing the granting of leave specifically applies to classified substitute employees. The term 'classified substitute,' as used by the Commission and the Department for many years, means a substitute who has a competitive classified civil-service status by virtue of having been regularly selected for probational appointment from a certificate issued by the Civil Service Commission for that purpose. Inasmuch as section 2 of Executive Order No. 9063 specifically provides that persons appointed solely by reason of the procedures adopted thereunder, 'shall not thereby acquire a classified (competitive) civil-service status' the Commission is reluctantly forced to the view that substitutes appointed under the War Service Regulations may not be regarded as having a classified status for the purpose of being entitled to leave benefits under the act of July 6, 1945.

"We regret that a more favorable decision cannot be made in this matter as we believe that the employees in question should be entitled to leave benefits. This is particularly true when there is nothing in the legislative history of Public Law 134 to indicate that Congress realized that the result of enactment of the new leave provision would be to deny leave benefits that had theretofore been available to war-service appointees. The Commission believes that it would be desirable for the Department to secure leg-

islation to correct the inequity which has been caused by the change in the language of the law granting leave benefits to substitute postal employees."

As indicated in the Commission's letter to the Department, the Commission regretted that it could not make a more favorable decision in this matter, because it believed that war-service substitutes should be granted leave in the same manner as classified substitutes. This is particularly true since these employees enjoyed the same leave privileges prior to July 1, 1945. You will appreciate, however, that the Commission was bound by the language used in the new law, and that the matter can be corrected only by an amendment of Public Law 134.

Sincerely yours,

W. C. HULL,
*Executive Assistant.*

Mr. Speaker, I trust that the Committee on the Post Office and Post Roads will give this bill early consideration and report it favorably, so that it may be enacted into law and an injustice to these Federal employees removed.

## Problems of Military Justice

EXTENSION OF REMARKS
OF
**HON. EUGENE J. KEOGH**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. **KEOGH.** Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered on December 19, 1945, at the section of criminal law of the American Bar Association in Cincinnati, Ohio, by Maj. Gen. Thomas H. Green, Judge Advocate General of the Army, on the subject Problems of Military Justice:

It is at the end of our wars—even victorious wars—that the Army hears most about its faults. It is then that those with grievances, and those with constructive criticisms as well, are able to make themselves heard. And this is, on the whole, a good thing. The Army learned long ago that the critic, the open forum of praise and censure which follows maneuvers or any other major military undertaking, is a most profitable source of plans for improvement. The lawyers in the Army are now finishing their task of administering justice for some 9,000,000 of our young men during almost 4 years of a desperate war. We are now prepared to receive their bouquets and their brickbats. We admit some apparent faults but think that, by and large, we have done a good job in harmony with American traditions of fairness and efficiency.

The court-martial system is, of course, primarily, designed to help our armies win our wars. The sanctions of military justice constitute an instrument of command. They form the strong right arm of the military commander in the maintenance of order and discipline within his ranks. Every officer and noncommissioned officer is taught, as his primary and continued lesson, that discipline, obedience in the interest of unity and teamwork, may best be developed through leadership, the qualities of intelligence and human understanding which inspire men to follow their leader and coordinate their efforts to the common end. But military men also realize that when they deal with a cross-section of our populace they deal with the weak individual as well as with the strong and with the recalcitrant as well as with the obedient. Punishments must be imposed in some cases if wrongdoing and defiance of authority are to be controlled. Justice in the administration of such punishment is a basic aim of the military justice system.

The revolutionary armies of the Colonies adopted the system of military justice they knew, that of their opponent, the British army. The British Mutiny Act was the pattern of our original Articles of War. The drafters of the Constitution recognized the necessity for a distinct system of military law when they gave to the Congress the power to make rules for the Government of the land and naval forces. And the fifth amendment excepted from the guaranty of grand jury presentment or indictment in criminal prosecutions, cases arising in the land and naval forces. The Articles of War as originally adopted and enacted by the Congress have been amended from time to time, the last major revision having been enacted in 1920. I can safely say that each revision has been designed as much to safeguard the rights of accused persons as to make the Articles effective in operation.

Basically, as they are now constituted, courts martial afford to accused persons the equivalent of all rights which our civil courts afford to defendants in criminal cases. No charge may be referred to a general court martial until it has been thoroughly and impartially investigated. Our investigations do not suffer by comparison with those conducted before the typical grand jury. The established rules as to double jeopardy, self-incrimination, reasonable search and seizure, speedy trial, right to information as to the nature and cause of the accusation, confrontation with witnesses, compulsory process and assistance of counsel, apply in court-martial procedure. Rules of evidence prescribed for courts martial are patterned on those of American criminal jurisprudence.

The eminent Prof. John H. Wigmore, while serving in the Judge Advocate General's Department, collaborated in statements of these rules. We have an advance statute on the effect of error in criminal trials, abolishing the antiquated rule of presumption of injury to the rights of the accused persons and substituting the test of actual injury. We do not have a trial judge and a trial jury in the usual sense.

In lieu of judge and jury we have in our court-martial of broadest jurisdiction, the general court-martial, a panel of officers of the Army in number not less than five, which includes one officer who serves as law member with powers concerning the reception of evidence and other interlocutary questions parallel to those exercised by the typical trial judge. Officers of the Army also serve the courts as trial judge advocates or prosecutors, and as defense counsel. Our law members are specially selected for their legal experience and common sense, as are the defense counsel and other officers of the court. We of the legal mind can, of course, always see room for improvement in the judicial qualities of these key officers. I think we all agree that with civil courts as well as with courts-martial the legal profession is never entirely satisfied with the skills of the judges. Although defense counsel before courts-martial may lack some of the special skills exhibited before civil juries, they traditionally act without sharp practice and the normal tendency is for them to move in straight lines toward disclosure of the simple truth. Because simple, prompt, and strong justice best serves the ends of discipline, courts-martial strive to be simple, speedy, just, and effective in their processes. To dispel any conception that our courts-martial are really hard-boiled in their dispensing of justice I may remark that a recent survey of several categories of our cases showed a fairness for which I do not believe we receive credit in the public mind. For example, of 345 prosecutions for murder during the fiscal years 1942 to 1945 inclusive, 107, or 31 percent, resulted in acquittals, and 92, or 27 percent, resulted in findings of lesser included offenses. Of 473 cases of manslaughter, 296, or 63 percent, resulted in acquittals and 39, or 8 percent, resulted in findings of lesser included offenses. Of 307 cases of rape, 160, or 52 percent, resulted in acquittals and 44, or 14 percent, resulted in findings of lesser included offenses.

During World War I there was developed administratively an effective system of appeals in the court-martial system. Upon the revision of the Articles of War in 1920 this system of automatic appeals applicable in all general court-martial cases was put in statutory form. Briefly, the law requires that no sentence involving death, dismissal, dishonorable discharge or penitentiary confinement may be carried into execution until the record of trial has been examined by a Board of Review in the office of the Judge Advocate General and, with the concurrence of the Judge Advocate General, held legally sufficient to support the sentence. The Board of Review and the Judge Advocate General, and in some cases the President and the Secretary of War, is given authority to set aside or vacate illegal convictions. Strict conformity with judicial processes are thus insured. The Boards of Review have developed a body of decisions covering the laws of evidence and procedure before courts martial which may well take position among other worth-while judicial pronouncements of American criminal law. During time of war the President may, through the Judge Advocate General, establish branches of his office, with Boards of Review, in distant commands, with appellate powers similar to those of the Office of the Judge Advocate General in Washington. These branch offices are autonomous both in legal theory and in practice. During World War II such branch offices were established in the European, Mediterranean, Far Eastern, India-Burma and mid-Pacific theaters of operations. The legal requirements fixed by the Congress have been administered with strict observance and with the will to make them effective and fair.

The sentences of courts martial are in time of peace strictly limited by maximums fixed by the President. In time of war, to the extent that sheer necessity seems to require, some of the limits are removed. Commanders in the field, at grips with brave, efficient, and tenacious enemies, find that severe sentences are sometimes required for their deterrent effects. Experience shows, for example, that some types of soldiers prefer skulking to facing the enemy—prefer a mild court martial sentence to the hazards of combat. And the well-intentioned soldier cannot understand why he should risk his life while the disobedient and the malingerer gets away with his skulking. Absence without leave, desertion, and disobedience of orders are other offenses which at times demand swift and strong punishments if campaigns and wars are to be successfully waged. It is not a cause of surprise to learn that the aftermath of war presents a considerable number of sentences by courts martial which appear to be severe for postwar purposes.

Viewed realistically a severe court-martial sentence of confinement is, however, only a form of indeterminate sentence, a form now popular with civil-law enforcement bodies. The executive officers of the Government, including the President, the Secretary of War, and high military commanders, have plenary power to reduce sentences and the Army systematically examines the cases of its prisoners with a view to the intelligent and just exercise of this power. I think there is no system in the world which insures to the persons in confinement a more thorough, a more level-headed, and a more just consideration of their rights and of the interests of the public, than our own military justice

administration. At present there is operating in the office of the Under Secretary of War an Advisory Clemency Board charged with the duty of examining for clemency the complete records of every prisoner who is still serving sentence for a serious offense. This board is headed by Justice Owen J. Roberts. It includes an expert civilian penologist and three officers of the Army, some with experience in combat and all with experience in the administration of military justice. It is the duty of this board to determine policies of punishment which are consistent with enlightened penology and the requirements of discipline, and policies which will return the prisoners to the civil communities as soon as may be feasible. A number of special boards operating under the general direction of the Advisory Board are conducting examinations in individual cases. Needless to say, these boards receive advice from The Judge Advocate General as well as from the administrative penal agencies. Final control of the program rests in the Under Secretary of War.

For many years the Army has realized that while some of its offenders are of the criminally inclined class, there are many others who have the qualities of intellect and character which fit them for honorable service in the Army. It has been assumed that one misdeed does not necessarily demonstrate unfitness as a soldier. It has been the practice, therefore, for the Army to make an intense effort to evaluate its prisoners with a view to their possible restoration to duty. This program has been implemented by the Articles of War which give military commanders the necessary powers of remission and suspension. Congress has also given to the Army the power to restore to duty soldiers who have been separated under dishonorable conditions. During peacetime our standards of restoration are strict but a very considerable number of men who have been sentenced to dishonorable discharge are nevertheless restored to duty prior to the expiration of their sentences. During World War II, as will, I understand, appear from the remarks of another speaker on this program, a liberalized and intensive effort to restore men was undertaken. Suffice it for me to say that the success of the undertaking is attested by the fact that roughly one-third of the prisoners sentenced to dishonorable discharge were restored to the Army to perform their duties as citizen soldiers. I am informed that the undertaking in this connection was particularly successful in some of the theaters of operations and that many men who once dropped by the wayside were rehabilitated and given the opportunity to serve in combat units.

In conclusion I wish to state that the Office of the Judge Advocate General of the Army welcomes suggestions for the improvement and the administration of military justice.

## British Gloomy at Harsh Terms of American Loan

EXTENSION OF REMARKS

OF

### HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Times of December 15, 1945:

ABROAD—BRITISH GLOOMY AT "HARSH" TERMS OF AMERICAN LOAN

(By Anne O'Hare McCormick)

LONDON, December 14—A visitor fresh from the United States would have had the shock of his life listening to the 2-day debate in Commons on the American loan. It was a brilliant but gloomy debate, gloomier in some respects than those of the dark days of 1940 when a beleaguered but united Britain drew a certain exaltation from standing up to the enemy alone.

The 344 members who voted approval of the loan did so with unconcealed reluctance and misgivings. The Conservatives' decision to abstain, sharply criticized as an evasion of responsibility at a critical point in British history, did not prevent seventy members of the Opposition party from voting no. Described by some as an "economic Munich," by others as an "economic Dunkerque" and by all as a hard bargain, the loan was supported even by its chief advocates, Hugh Dalton and Ernest Bevin, only on the ground that it was the lesser of two evils and the only alternative to greater austerities than British people had suffered for 6 years.

The American visitor would be more surprised to find the man in the street taking the same attitude as members of parliament. Two workingwomen in a bus today agreed that they would rather continue living on bread and treacle than to be beggars to America. A businessman remarked gravely that acceptance of the conditions of the loan means exchanging British economic independence and stability for dependence on the "oscillating" American economy of booms and slumps. "But, of course, we sacrificed our economic independence to win the war," he added bitterly. "Our only hope now is that the United States is prepared to interpret her obligations as a creditor in a way to enable us to carry out our obligations as a debtor."

The truth is that an agreement that seems to most Americans generous in the extreme is regarded by most Britons as ungenerous in its recognition of their sacrifices and fettering in conditions it imposes. This is not to say that the people of this country are insensible to the heroic and munificent part the United States played in the war.

Nevertheless, they all share in some degree the feeling expressed by Col. Oliver Stanley when he said in the House that instead of a victorious people discussing the economic consequences of victory "a visitor from Mars might well be pardoned for thinking he was listening to the representatives of a vanquished people discussing the economic penalties of defeat."

Reports relayed here from the United States show Americans have no idea how the average Englishman feels on this subject. They don't realize how galling it is to have no choice but to accept terms that seem to him to interfere with empire trade and put him under financial tutelage to the United States for the rest of the century. Since so far he has enjoyed none of the expected fruits or relaxations of victory, this makes him wonder more than ever whether he really won the war. Press comments here make equally clear that the British on their side have no conception of the United States' problems or the United States' state of mind. They do not realize the burden of debt overhanging the United States or the prodigious difficulties growing out of overexpansion of war industries at the expense of others. Thinking in terms of a creditor nation of the nineteenth century they cannot understand the impact on American public opinion of the unprecedented demands for help from everywhere.

If two countries with a common language linked as closely by interest and tradition as the United States and Britain cannot understand each other better than this, the prospects for agreement between the Soviet Union and the western powers are pretty bleak. The saving and imperious truth is that for all of us there are no alternatives. The British are without illusions on this score.

But it is equally true that the United States has no alternative but to lend. Our economic life depends as much on the recovery of Britain as our physical immunity depended on her stand in the war. No one who has looked on what Churchill calls the tortured face of Europe and has seen at first hand the bankrupt world we live in can question for a moment the necessity of building up one sure element of health.

Some Englishmen believe the terms of the proposed loan represent an act of faith and courage on the part of the United States negotiators, and Americans who have surveyed the ruins left by war are convinced the loan is not big enough or would have been better from all points of view if given grant in aid. One of these suggested today that world conditions are so dangerous for us that it would have been wiser if the mutually irritating question of a loan had never come up.

I would put an end to all this argument about competitive tariffs and empire preferences by a bold proposal of a customs union between the United States and the British Commonwealth, he said. The idea may be premature and would be difficult in working out, but it is not utopian in the world as it is. Even as an idea, it would be the first step toward economic world order, without which a political UNO will never work.

This is a far-away solution, but it does not sound so unrealistic over here as at home. Face to face with the break-down of the world we have known, the question of methods by which it will be rebuilt or made over—by loans or gifts, partnerships or collective action—seem irrelevant compared with the supreme urgency of getting all hands to work.

## Our Boys in the Service

EXTENSION OF REMARKS

OF

### HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. SPRINGER. Mr. Speaker, we are approaching the Christmas season, and while the people generally, with charity in their hearts, are remembering their fellow men, I take this opportunity to again call to the attention of the Members of the House that we have millions of our boys who will spend Christmas Day in some foreign land, where they will not have the enjoyments of a Christmas Day at home. This is a sad approach to Christmas for those boys still in the service, and it is a sad approach to Christmas for their families, relatives, and their friends. In fact, every American—with probably a few exceptions—are saddened because our boys are not permitted to be at home this Christmas.

The Army and the Navy are, perhaps, the exceptions above referred to in these remarks. There remain in the service many men with families, many doctors with their offices closed during their ab-

sence and their home community in great need of their professional services, many lawyers whose offices have been closed for a long period of time, and their clients are awaiting the return of their lawyer in order to complete the settlement of an estate or to try some important question in court, and there are many of the younger boys who have not yet completed their high-school work and those who have completed their high-school course but who desire to attend college and prepare themselves for their future, and then there are so many of our farm boys in the service, some of whom have their farms and their implements, and some of whom have livestock, and they are eager to return to take up their work again; in fact, Mr. Speaker, boys and men of every walk in life are yet in the service of their country, stationed in the far corners of the earth, and every one of them are craving that day to come when they may embark on the journey back home. These boys have done their job—and they did a good job. They want to receive their releases and discharges, and they want to come home.

Mr. Speaker, there are several pending bills which relate to the early release and discharge of these soldiers and sailors, who are eligible for discharge, at an early date. Provision is also made for the discharge of all those coming within the "hardship rule," and to provide for the discharge of the boys who desire to complete their education. May I say here that I have signed each and every discharge petition now upon the Speaker's desk to bring each and all of those pending bills before the House for debate and vote, so quicker action may be had on all of those measures, and, in the end, to speed up the Army and Navy in releasing and discharging all of the men and boys yet in the service, and who have the obligations of a family, a profession, an occupation and an education before them.

So many of these men and boys are now worrying about their future. Some of these soldiers and sailors have had more than 4 years of service, and many of them have not been at home during a very large portion of that time. They have their own lives to live, and they have their future before them. They want to get started in their lives and in their professions or occupations. They want to get a job before all of the jobs are taken by others—they want a chance in life.

It is needless to say that there has been much lost motion in the discharge system following the end of this war. The boys know that fact, and the people are well aware of that situation. And at this Christmastime, when the millions of our boys are still in the service—stationed upon the far-flung islands and shores of the world—and many of them have ample points for discharge, and many of them have a great excess of points for discharge—they are usually advised by their superior officers that "there is no ship available for transportation," or "you are essential to the service," and there is little wonder that these boys are worried and despondent over their sad plight. There is very little charity in those responses at Christmastime when our boys want to return to their homes and to their home communities. But the Army and the Navy have the sole responsibility. Their orders control and dominate all these boys in the service, and they alone are responsible for this situation. Since VJ-day there has been a slow-down all along the line in the discharge system and it is interesting to know of the vast number of our ships and planes available for transport duty in returning our servicemen to this country that have been taken out of the service since victory was ours. Compare that condition with the huge number of ships and planes that were used to transport our men to the battlefront and you will have some very interesting history.

Mr. Speaker, our veterans of World War II are greatly disturbed over the slowness of their discharges, and their return back home again. Letters are coming to my desk from the far corners of the globe from these boys—all of whom desire to secure their release and discharge at the very earliest possible moment. Some of these boys are extremely bitter over their sad plight, and it is my confident belief that the service in both the Army and Navy may be impaired in securing enlistments in the future because of this extreme condition. These boys should not be penalized—they have served faithfully and well, they have brought victory to our country—but they should be given the consideration to which they are entitled to receive as the heroes of this war. These boys know that the voluntary enlistments into the service are great, and that those voluntary enlistments by those who want to make a career in the Army or Navy are now supplying the needed personnel, coupled with the Regular Army and the Regular Navy, to meet the demand for occupational duty in both theaters of the late war. So the knowledge of this fact simply adds to the discomfort of those American boys who are still in the service, all of whom want to come home at the very earliest moment.

Mr. Speaker, in the spirit of Christmas—in the Christian spirit—it is my hope that those in power, and I speak of those higher up in the Army and Navy, will adhere to the sentiment of the season—will realize that they, too, had their lives before them in the years ago—and will adopt a policy which will lead to the early releases and discharges of these home sick and despondent boys, so they may, too, have their chance in life before it is too late for them to rehabilitate themselves in the arts and trades of civil life. A chance is all they want—but as long as they are kept in the Army or Navy they will have no chance. Each month and each year they are forcibly retained in the service simply removes from them that much of their chance to go forward in their own rehabilitation.

Let the controlling officers, in this matter, speak to the boys—and I hope they will say—"A Merry Christmas" and a "Happy New Year," and that they will act by liberalizing their ironclad discharge system and make it humanly possible for our boys to return to their homes—discharged from the service—so they, too, will realize this to be a Merry Christmas and that the New Year will be the happiest one of their lives.

---

## A Challenging Christmas

EXTENSION OF REMARKS

OF

### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Christmas message prepared by me entitled "A Challenging Christmas."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Christmas 1945 is a Christmas like the sweet Noels of old.

It is also a new Christmas, a challenging Christmas.

First, how is it like the Christmases of old?

One reason, the most important reason, is that we are once again celebrating Christmas while at peace. Those unforgettable words, "On earth, peace and good will towards men," hold living meaning for us today.

Another reason is that there has been for some time a trend toward things spiritual. Christmas 1945 accentuates that trend.

Still another reason is that our tasks and responsibilities now permit us to pause in fond memory of the past.

There are no recollections in our life sweeter than those associated with the Christmas holidays. We recall those days of childhood with parents, now long since departed, when we gathered around the blazing, crackling fire of logs in the grate. We recall those days when, as students in college, we wandered back to the paternal hearth; those days of mother's holiday dishes and father's generosity; and over all, the love and solicitude of parents and brothers and sisters; the tales our parents told of the Christmases of their youth; the loaded Christmas tree, the holly, the mistletoe, and the blazing hearth; the sleigh bells ringing out through the crisp air, the beauty of the midnight mass, and the singing of carolers.

We recall also those other Christmases when we as parents had our own little brood around us, the brood which is now grown to manhood and womanhood, with homes of their own—the gambols, laughter, and cheer of children.

Yes, Christmas awakens the strongest and most heartfelt associations of the past. It is a season uniting friends and kindred, a season of radiant spirits, blended with the most solemn and sacred memories; a season of open house, genuine hospitality, filled with joyous festivities.

And, too, with the home memories of Christmas, there are those associated with the church services—inspiring and hallowed. They tell the beautiful story of the Christ Child. There is the music of this season—choir and organ, with Christmas carols.

Yes, now again, there are the lighted Christmas trees, shining out upon the snow-covered earth. There are the Christmas delicacies, the gatherings with old neighbors

and friends. There are the shining heavens of Christmas. Truly it is a sacred and a joyous season. There is a fragrance about Christmas which no other season brings. There is the warmth of friendship, happiness of countenance, and joy of spirit.

But this Christmas is different. Today we live in the atomic age. The advent of the atomic bomb climaxed 50 years of the greatest period of invention and discovery that the world has ever seen.

Humanity is attempting to reach beyond these discoveries and to pierce the veil—to ascertain life's real meaning. There is a spiritual awakening among the peoples of earth. They desire a better understanding of God and man's relation to Him.

One thousand nine hundred and forty-five years ago, in a stable in Bethlehem, a Child was born. This Child grew up to manhood and was designated by the various terms of Master, Wayshower, Christ Jesus, the Son of God. Through Him there flowed the divine manifestation of God in greater completeness than in any other mortal.

He was also called the Light of the World—Saviour. Others before Him had manifested to the world great spiritual truth. Such were Moses, Nehemiah, Job, Isaiah, Daniel, and others. But Nazarene, as He was called, told men to seek and they would find.

He sensed man's unity with his Maker, so much so that He could say: "I and My Father are One." On another occasion He said: "I am the way, the truth, and the life." His job was to make truth understandable and workable—the truth which, when utilized and lived, would heal the heart of humanity.

The beautiful story of the nativity of Jesus, as found in the Bible, pictures the shepherds receiving the angelic tydings of the Saviour's birth. It pictures their going forth to Bethlehem, where they found the Babe wrapped in swaddling clothes, lying in a manger. But this Babe had to grow in stature and wisdom and in favor with God and man. That means He had to put off His swaddling clothes.

The challenge of that incident is plain to us this Christmas.

You will remember that I have called Christmas 1945 a challenging Christmas.

We have won the war. But have we put off our swaddling clothes, such as intolerance, hatred, lust, ingratitude, envy, criticism, and smugness?

When the Christ Child had grown to manhood, He gave of His spiritual wealth. He gave ideas which, if followed in individual, national, and international relations, would solve the problems of mankind. You remember He said: "Blessed are the peacemakers: for they shall be called the children of God." He recognized that peacemaking was a matter within one. He made the dynamic statement that "the kingdom of heaven is within you." Very few have caught up to that statement.

He constantly preached to His followers the need of "fearing not, and rejoicing always." Was not that the message that the angels brought also? They chanted: "Fear not, for, behold, I bring you good tydings of great joy, which shall be to all people."

And so, my friends, let us resolve that this Christmas season—the first Christmas of peace in 5 years—we will not simply celebrate the advent of the Christ Child in the usual way.

Let us resolve that we will here and now rededicate ourselves to the job of bringing peace on earth and good will among all races of men. Let us bear in mind that Jesus was not only a teacher but a doer of the Word.

We must, if we intend to follow in His steps, recovenant that we will individually, nationally, and internationally get rid of the little foxes that destroy the vines of harmony and productivity. We must live the truths contained in the Sermon on the Mount. We must practice the Golden Rule and live as good Samaritans.

Christmas, 1945, is like the Noels of old. But it is also a new Christmas—a challenging Christmas—for us all.

I think that this Christmas the star of peace is shining more brightly than it has in many years. There are happy omens for those who have eyes to see with that peace, for which the race has longed and hungered, will soon be a continuing thing of reality.

We know that conditions are better between Russia, Britain, and ourselves. Contingents of Russian and Australian troops are going into Japan to serve under MacArthur. As a result, more of our boys are coming home. The crisis in the Near East appears to be clearing up.

There are signs that on the management-labor front in America both management and labor are sensing the fact that there is a third party in the picture—the public—which has rights and is entitled to consideration.

And so the Name, which is above every other name, comes to have greater meaning than ever before. The flame which the Saviour lit 2,000 years ago burns ever and ever brighter. It throws an everlasting light of hope and faith.

Guided by that light, we can do naught but triumph over our problems. We can do naught but be adequate to our challenges.

God is greater than any problem. The joyful spirit of Christmas is more enduring, more powerful, than any momentary setback or sadness or misfortune we may suffer now or in the future. Let us remember that fact always and take heart and courage from it.

In conclusion, dear friends, may I express on behalf of Mrs. Wiley and myself our warmest wishes of the season to you and yours and to the kind folks of this station who made this broadcast possible.

May all of us and all of humanity go on from this challenging Christmas to even more joyous Christmases to come.

May we all come to know that peace, spoken of old, is "the peace which passeth all understanding."

## Guayule Rubber Gets the Run-Around

EXTENSION OF REMARKS

OF

### HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. ANDERSON of California. Mr. Speaker, in March 1942 this country embarked on a program for the production of domestically grown natural rubber from the much-discussed but little-known guayule shrub. It was carefully and thoroughly explained to the Congress at that time that at least 4, and perhaps 5, years would elapse before any substantial amount of rubber would be obtained from this rather slow-growing desert plant. Now, just a little over 3½ years since the inception of the program, Congress has voted to liquidate the entire project by the end of 1946.

What utter folly, what tragic shortsightedness; with natural rubber at a premium, and with our stock pile at an all-time low, we blithely authorize the destruction of 30,000 acres of guayule with a potential output of from fifteen to twenty-five thousand tons of rubber, depending upon the age which growing plants are permitted to reach.

Not with my vote, Mr. Speaker. I, for one, do not intend to bury my head in the sand like the proverbial ostrich and let the United States again become the international sucker for the notorious British-Dutch rubber monopoly. Have we no regard for the rubber consumers in this country? Are we again going to ignore the recommendation of General Eisenhower who, in 1930, said:

> If the guayule industry could develop to the point where approximately 400,000 acres were devoted to the growth of guayule, we would produce annually almost 160,000,000 pounds of rubber and have on reserve at all times not less than 250,000,000 pounds. The existence of these conditions would, in the event of a war where our overseas communications were interrupted, be of inestimable value to the Nation.

What a prophecy that turned out to be.

I know, just as every other Member of the House knows, that the Government management and administration of the emergency guayule rubber project has been costly, wasteful and uneconomic. Is that any reason for scrapping the two mills that have already been constructed and junking 25,000 tons of one of the most precious natural resources in our possession?

Now, to cap the climax. The following exchange of correspondence between the Rubber Reserve Corporation and the chairman of the California State Guayule Rubber Project Committee ought to win the fur-lined bathtub. Eighteen cents per pound for domestic guayule rubber, 31 cents per pound for an inferior product from Mexico and heaven only knows how many times that much for rubber from South America. Everybody passes the buck, our "good neighbors" get the dough, guayule gets the run-around and the American rubber consumer gets it in the neck.

RECONSTRUCTION FINANCE CORPORATION,
OFFICE OF RUBBER RESERVE,
*Washington, D. C., November 28, 1945.*

CARLYLE THORPE,
*Chairman, California State Guayule Project Committee, Washington, D. C.*

DEAR MR. THORPE: This letter is being forwarded to you at the request of Mr. Parsons representing your committee, who discussed with the undersigned on November 27, 1945, several aspects of the proposal of certain interests in California to purchase from the United States Department of Agriculture the emergency guayule rubber project at Salinas.

Mr. Parsons was advised that under Civilian Production Administration Order No. R-1, as amended, no person is permitted to sell or to buy natural rubber, including guayule, without first obtaining authorization to do so from the Rubber Bureau of the Civilian Production Administration, Washington, D. C., which succeeded the War Production Board. This office acts as the sole importer and distributor of natural rubber, including guayule; therefore, it will be necessary that all guayule produced in the United States be sold to this office.

As explained to Mr. Parsons, this office is not in a position to make any commitment other than from day to day as to the price which it will pay for guayule rubber offered to it. The current price which this office is paying for usual good quality guayule is 19 cents per pound in less-than-carload lots, less freight to destination designated by this Cf-

fice, and 18 cents per pound in carload lots, less freight to destination designated by this Office. Such price represents this Office's domestic selling price for such guayule.

Although commitments have been made in the past to purchase guayule in foreign countries at a price in excess of the selling price in this country, such commitments were made entirely for the reason that the Japanese occupation of the far-eastern rubber sources made it imperative to pay whatever price was required in order to obtain maximum production. Obviously, this situation does not exist now that hostilities have ceased and the far-eastern rubber sources are again in the hands of our allies.

If there is any further information which this Office can furnish you, please do not hesitate to contact the undersigned.

Very truly yours,

RICHARD BAYBUTT,
*Deputy Director, Office of Rubber Reserve.*

---

CALIFORNIA STATE GUAYULE
RUBBER PROJECT COMMITTEE,
*Los Angeles, Calif., December 5, 1945.*

RECONSTRUCTION FINANCE CORPORATION,
*Office of Rubber Reserve,*
*Washington, D. C.*

(Attention Mr. Richard Baybutt.)

DEAR MR. BAYBUTT: Your November 28 letter has been given careful consideration by this committee.

As you are doubtless aware, Congress has just passed a bill requiring liquidation of the Government's guayule emergency rubber project during the year 1946 and, therefore, unless something is salvaged out of this industry by private enterprise, production of natural rubber in United States will be completely and probably permanently eliminated within 6 months or so.

Most of the farmers in the Salinas, Tracy-Newman, Colusa, and southern California districts, on whose land the Government has guayule leases, stand ready to form a cooperative organization for the purpose of purchasing and operating the Salinas rubber mill with the harvesting, baling, and transportation equipment assigned to that mill. They will then continue to care for their present guayule plantings to economic maturity, and when these plantings are harvested many of the cooperating farmers intend to replant and continue in the guayule-growing business.

Recent improvements in varieties which will produce 20 percent more rubber and 20 percent more tonnage per acre, with maturity about a year sooner than the presently planted varieties, together with improved techniques in growing nursery stock, in planting seeds directly in the growing fields, and in cultural, harvesting, baling, and milling practices, have convinced many of our farmers that in the future they can compete in a free and open market with imports of natural rubber and we would like the chance to prove it.

It is conceded that Government operation of the farms and the mills has been far more costly than under private enterprise. For instance, a preliminary study by those farmers interested in this cooperative undertaking indicates that we can mill the rubber for 6½ cents to 7 cents per pound and that we can harvest, bale, and transport the shrub to the mill at $6 per ton, or approximately 3 cents per pound for the rubber. But it costs something to care for the fields, and unless the farmers are given a reasonable profit for maintaining the guayule they will naturally turn to producing other profitable crops.

Your argument that the war emergency is over, and thus it is no longer necessary to pay any price necessary to obtain rubber, sounds logical until we give consideration to the existing supply-and-demand situation. Demand for natural rubber is now far in excess of supply, as is evidenced by the fact that if we were permitted to sell this guayule rubber on a free and open market we could contract a year's output for well over 50 cents per pound. One manufacturer has offered us $2 per pound for 100 tons per month.

Where in hell's the logic in the Government spending $9 to $15 per acre to eradicate the growing shrub from the existing fields when farmers are willing to take their fields over "as is" and supply badly needed natural rubber for not over half the price the open market is willing to pay? We would appreciate an answer to that one.

Again, why pay the low wage-earning, low-standard-of-living Mexicans 31 cents per pound for an inferior grade of guayule rubber and only offer us 18 cents, or half the price, for a far superior grade? This policy actually penalizes American producers as against foreigners. The existing Rubber Reserve directive seems to us to be good-neighbor policy with a vengeance.

We realize, Mr. Baybutt, that as long as the demand is in excess of the supply that it is logical to control rubber prices. But, by the same token, is it logical to destroy a potential production of 15,000 tons of rubber in the United States. And if the Government, in order to hold retail rubber prices down to prewar levels, sees fit to subsidize rubber-product manufacturers by selling its natural rubber to them at less than half the cost of importations, why shouldn't it pay domestic producers, with the highest labor and material costs, the highest taxes, the highest land values, at least the same price it pays foreigners?

All our people are asking is that the Rubber Reserve Corporation either give us the same contract that they have with the Mexicans or permit us to sell our product uncontrolled on the free and open market. This seems to us only fair, and, in view of the above arguments, we hope you will reconsider your first decision and favorably consider our request.

In view of General Eisenhower's report, per copy attached, do you think it is logical for the United States to be dependent upon a foreign source of supply, located 10,000 miles away, for so important a strategic material as natural rubber when an infant industry here in America is anxious and willing to pioneer its development in free and open competition with all comers?

We are confident that world prices for natural rubber will remain sufficiently high for at least the next 5 years to permit us to operate profitably until by experience and through trial and error we can prove to the world that we can produce natural rubber in America as cheap or cheaper than any place in this cockeyed world.

What do you say?

Sincerely,

C. THORPE, *Chairman.*

---

RECONSTRUCTION FINANCE CORPORATION,
*Washington, D. C., December 14, 1945.*

MR. CARLISLE THORPE,
*Chairman, California State Guayule Project Committee, Los Angeles, Calif.*

DEAR MR. THORPE: Receipt is acknowledged of your letter of December 5, 1945, concerning the price at which Reconstruction Finance Corporation will purchase domestically produced guayule rubber.

In order to understand the position of this Corporation, you should bear in mind that the price at which this Corporation sells guayule rubber to consumers is fixed by the Office of Price Administration rather than by this Corporation and this Corporation cannot purchase same in excess of the established selling price unless it intends to subsidize domestic production of guayule rubber. This Corporation was specifically authorized by Congress to subsidize the production of natural rubber in foreign countries during the war emergency and similarly the Department of Agriculture was authorized to undertake the domestic production of guayule rubber, which was tantamount to a subsidy inasmuch as it was recognized that the sale of guayule to consumers would be at a price less than the cost of production. It is not the prerogative of this office to continue the subsidization of domestically produced guayule, particularly since Congress has only recently determined that the domestic production of guayule should not be subsidized any longer.

As to whether domestic producers of guayule should be, or when they will be, permitted to sell on the open market rather than to this Corporation is a decision which rests not with this Corporation but with the Civilian Production Administration, and until the present controls and restrictions are removed there is nothing this Corporation can do in the matter.

You state that you have received an offer of $2 per pound for 100 tons of guayule per month, but you did not indicate whether such offer was made by a manufacturer of permitted products or of nonpermitted products. Undoubtedly, manufacturers of nonpermitted products and black-market operators would be willing to purchase much more than 100 tons per month at almost any price. However, as long as the Office of Price Administration believes the over-all national economy is served best by a selling price of 17½ cents per pound for guayule, this office must abide by the decision of the Office of Price Administration. If you disagree with such decision, your recourse is with the Office of Price Administration or with Congress.

With regard to the price being paid to Mexican producers of guayule, I will only reiterate that such price is being paid solely because it was necessary as a war measure to agree to pay such a price through June 30, 1947, in order to obtain maximum production during the war period. Upon the expiration of such contract it is not contemplated that any further commitments will be made with Mexican interests at price above our domestic selling price.

Yours very truly,

RICHARD BAYBUTT,
*Deputy Director, Office of Rubber Reserve.*

Copy to Congressman ANDERSON of California.

---

## Mr. Harry Bashore, an Outstanding Public Servant

EXTENSION OF REMARKS
OF
## HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. CURTIS. Mr. Speaker, Mr. Harry Bashore, the Commissioner of Reclamation, is leaving the Federal service. Mr. Bashore, having reached the age of 65, is going to leave his desk in Washington and return to his home at Mitchell, Nebr. I know that I speak for every Representative from the West when I say that we are grateful for the long years of service that Mr. Bashore has rendered. We hope that he will enjoy many, many years of life and that many good things are in store for him.

Mr. Bashore graduated from LaGrange College in LaGrange, Mo., in 1899, with a bachelor of arts degree, and from the University of Missouri at Columbia, Mo., in 1906, with a bachelor of science degree in civil engineering. He joined the Bureau of Reclamation in 1906, when that agency was only 4 years old. He

was an engineering aide and later superintendent on the North Platte project in Nebraska and Wyoming. In 1927 he became construction engineer on a project to irrigate 32,000 acres in eastern Oregon. Three years later he was called to Spokane, Wash., where for 2 years he made the engineering investigations that preceded the building of the world's largest concrete dam—Grand Coulee Dam on the Columbia River to store water for irrigating more than a million acres of new land which will provide thousands of farms for returning servicemen and others. In 1932 he went to Sacramento to conduct preliminary investigations on another great multiple-purpose reclamation project—the 2,000,000-acre Central Valley development in California. The following year he became construction engineer and supervised the building of the Alcova and Seminoe Dams on the Kendrick project in Wyoming. From Wyoming to Washington was but a step for Harry Bashore after having given such an account of his administrative ability and capacity for thorough, careful workmanship. He was appointed Assistant Commissioner of the Bureau of Reclamation in 1939 and succeeded John C. Page as Commissioner in 1943.

Mr. Bashore's illustrious predecessor John C. Page was also a Nebraskan. Mr. Page was born in Nebraska, he graduated from the college of engineering at the University of Nebraska and served the Bureau of Reclamation with distinction for many years.

Mr. Speaker, I would like to extend my remarks by including an editorial which appeared in the Lincoln (Nebr.) Star of December 17, 1945:

BACK TO MITCHELL

The Nebraska neighbors of Harry W. Bashore could be a little bit envious of the opportunities which this adopted Nebraskan has had as the head of the United States Bureau of Reclamation. It is the job of the finest creative activity. Each day of it brings the satisfaction justly arising from knowledge that America's natural resources are being restored.

Mr. Bashore entered the reclamation service in 1933, and his first responsibility was the North Platte irrigation projects in western Nebraska. He followed this assignment by supervising construction of the Alcova and Seminoe Dams in Wyoming, rising steadily until appointed Commissioner in August of 1943. Now, at 65, retirement age, Mr. Bashore confirms his devotion to the region where so much of his activities took place by announcing his intention to return to Mitchell to take up residence. He has the satisfaction of knowing that he was associated with the reclamation service in its period of the greatest usefulness.

## All of Us

EXTENSION OF REMARKS

OF

### HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Farm Journal of December 1945 by Wheeler McMillen:

ALL OF US

(By Wheeler McMillen)

All of us feel better this Christmas. Even those whose sons will not come back have the sad comfort of knowing war is over for their friends' sons, too. We shall not, on this Christmas morning, read of casualty lists. Headlines will not tell how many tons of bombs were dropped on an enemy. Many of the boys already will be home. We shall know that others will be on the way. The war is over. But has peace come?

If people were sensible, everyone would now forgive everybody else for the sins of the past. All people in all nations would treat others fairly. They would say, "Millions of men have been killed and hurt. Cities and roads and ships have been destroyed. The labors of long years have been wiped out. The world has been made poor. People who once lived happily are dead, or weak, or starving. No one of us is better off. The cruel, ignorant tyrants who started this war are gone or going. So now let us live and let live. Let us not quarrel. Let us not fight. Instead, we shall be kindly and be happy. We shall work and be well off."

Also, they would say: "From now on we live in danger. Never again can the world be the same. Man has cracked the atom! Nothing so truly awful has ever come about. A few evil, mad men can start war again, as such men have done before. With rocket planes they can shoot atom bombs against cities 10,000 miles away. They can push one button and vaporize a million people—turn to nothing by the act of an instant a whole city, all its people, and everything in it. A ghastly power, too horrible to think about—but true. We had better think about it. We must think what to do about it.

"On earth peace, good will toward men!" Never before were those words so filled with meaning; filled, too, with warning. Unless good will spreads among men there will be no peace on earth. Unless peace clothes the earth there will be no men. That can almost be true. The atom bomb has such power for ruin that it can blast away all the tools of civilization. An atomic war could leave only those few who escaped and were able to live as savages live. Our modern life depends upon tools, upon factories, railroads, wires, pipes, radio, cities, and machines. All these a few atomic bombs could destroy.

How sure can we be that people will choose to be of good will? Not sure at all. The Old World has always seethed with hatreds. Race has hated race. Nation has hated nation. Religion has hated religion. Some of these hatreds have lived for a thousand years, and they still flame. The cruelties of this war have added new fuel to these old hates. New causes for hate have risen. In the United States we have hate enough, yet we hardly know what it is. We have been free. Having been free, we have lived well. We have learned that a man who works and creates new wealth gets more than a man who spends his life fighting with others over a dollar, a crust, or an acre.

Unless we know how rare good will is among men, we can fool ourselves because we see so much of it at home. What other people pour out their money each year for Community Chests? What other nation gives so freely to the Red Cross? What other nation holds great drives to find clothes for the cold and food for the hungry and help for the stricken? Where else do men give hospitals and schools and art galleries and medical laboratories out of their own private pockets? Only in America are these things common. Only in America have many men been free enough to earn the means to give so generously.

So what can we do? What can you and I, as plain American people, do? How can we keep the atom from killing us? How can we spread good will among men? What can we do that there may be peace on earth? One thing, plainly, is to hold peace and good will in our own hearts. Peace and good will within our own families, and between us and our neighbors will help a little. They are mildly contagious, and will spread a little to others. But we are small ourselves—only a few among 2,000,000,000 people in the world. What else can we do?

Neither men nor nations gain advantage by being weak. We can insist that the United States shall be strong. The world being what it is, the strength of America must be such that it will be respected. Though the war is over, peace has not been made sure. Our scientists must always hereafter know more about the atom than anyone else knows. We must set free our men of the air, in the plane factories, and on the air lines, so that our air power shall be the strongest. We must set free our industries. It was the superiority of American industrial management and know-how that gave our fighting men the best arms first, and the most of them. We had that superiority because Americans have been free to invent, to risk, to decide, to plan, to make, to compete, and to sell. A strong America comes first of all.

Then we can insist that people everywhere shall be helped to help themselves. Hard as we may find it to believe, hunger and want are far more common than plenty. War has its roots in want. So, if people can be helped to raise and make what they want there is less danger that they can be stirred up to fight. American tools and American know-how will work any place. They will raise food, make goods, and haul things. In the long run they do not need to be given at our expense. They can be sold, for they will pay their way. Millions need American health know-how, too, so they can do more work. Certainly, one means toward peace and good will is to help people to work their way to plenty. The way may be long, but when they feel hope they will not find it too hard.

One other thing. America must not only be strong, but her statesmen will need to be tough. For a short time we hold the advantage of the atom. We can at least try to establish a world order that can settle disputes without war. We must be tough but not selfish—tough for our ideals. Our one national purpose among nations should be to prevent future fools from starting future wars. We know now that in modern war the victor loses, just as do the defeated. In future wars the whole human race will lose if, indeed, it survives.

"On earth peace, good will toward men!" Are human beings sensible enough to earn so high a reward? Will they ever choose leaders strong enough to solve national problems without wars? Will they ever learn that the Great Creator filled this earth with ever-renewable riches which man will harvest only if he studies nature's laws, and if he works in their obedience? Will men ever learn that the Golden Rule can bring both wealth and peace? What a glorious Christmas the world might enjoy were human beings truly practical!

## Congress Should Move Speedily To Protect the Authorized Wearers of Service Buttons

EXTENSION OF REMARKS

OF

### HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. ANDERSON of California. Mr. Speaker, on December 4 I addressed the

House on the necessity for imposing drastic penalties on individuals who are guiltly of wearing honorable discharge buttons to which they are not entitled. On the same day I introduced a bill, H. R. 4898, which would impose heavy penalties for the unauthorized or illegal wearing of discharge buttons and other service insignia.

As indicated by the following article from the Washington Times-Herald of recent date, there is an urgent need for passing the legislation referred to above. Let us put a stop to this unconscionable racket:

ANYONE CAN BUY SERVICE BUTTON

NEW YORK, December 17.—That little gold "ruptured duck," which the Nation's fighting men sweated out through years of war, can now be bought by any grafter, grifter, or IV-F who has the cash.

Current asking prices range from 35 cents to $25 in New York stores for the gold emblem which decorated Trajan's forum in ancient Rome and more recently was adopted by the United States as the token of honorable discharge from the armed services.

A reporter was able to buy a 35-cent sew-on emblem from one of the uniform outfitting shops with no questions asked about Army service. Another shop asked for discharge papers but was easily satisfied by a hasty glimpse of a driver's license.

That is to say there are no honest stores.

One shop required honorable-discharge papers, then a draft card, and finally apologized for being so strict.

"But we thought maybe you were an FBI man," the clerk said.

The Army public-relations office explained that stores are required to obtain a license from the Army Adjutant General's office in Washington in order to sell discharge emblems, and that the stores are supposed to ask to see discharge papers.

"Whether they do or do not is another question," a public-relations officer added.

One Manhattan firm is doing a rushing mail order business in "ruptured-duck" rings, in which there is no attempt made to check on the service status of the buyer.

Prices vary greatly from shop to shop, for there are no OPA price ceilings on this type of jewelry.

## The Loafing Period

EXTENSION OF REMARKS
OF
### HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. GAMBLE. Mr. Speaker, on December 4, 1945, there was published in the Standard-Star, of New Rochelle, N. Y., an editorial entitled "The Loafing Period," which, under leave to extend my remarks, I insert in the CONGRESSIONAL RECORD:

THE LOAFING PERIOD

It was to be expected that after the ending of wars on two continents, after an inspired national effort which admittedly called heavily upon our reserve strength, we should wish to rest a bit. Many deserve a little time to "sit it out" and catch up on lack of sleep and frazzled nerves and actually depleted physical reserves.

Then, too, there are many who are utterly unwilling to return to their prewar roles and for some this is thoroughly justified. The janitor or the elevator operator who rose in the ranks to a position of responsibility and command is not willing to go back to sweeping floor or running the elevator, and who is there to blame him for a desire to perpetuate his higher plane of livelihood?

Some, too, are shopping around, not with an intention of idleness for any extent of time but in a deserved leisure while they ascertain what the market offers for their best interests. Many who were upgraded in war industries now refuse to accept downgrading. And in the case of women, many who found independence and pleasure in constructive effort are disinclined to return to domestic service or clerical jobs of less prestige and consequence in the social and economic scale.

This is all understandable. But on the other hand, surveys indicate that there are hundreds of thousands more who are just plain loafing. They have their wartime earnings, they have their war bonds savings, and they want a good time before they put the harness back on. Some are drifting about the country, seeking vainly what they could not find at home, under the prevalent theory that the grass in the other pasture is always greener.

This may be pleasant for a time. It is good after an all-out exertion to sit for a while and rest, drawing upon the resources we have been fortunate to save, playing once more and learning again that life is not all blood and sweat and tears. But if we doze too long in the sun we tempt sickness; if we cultivate coma we may find it has turned into a catalepsy. Laziness is a vice which can become the master.

Isn't it about time we shook off this hypnosis of fatigue and get back to work? Let's quit waiting for George to do it. Let's recognize that reconversion means not only the making over of large industrial factories, but also of our own mental and physical structures, to the point where we can again find pleasure in hard work.

We have had our rest. Now the time for loafing has ended. Let's get back on the job.

## Rank Injustice for Some Retired Federal Employees

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. HAGEN. Mr. Speaker, for many years I have watched the progress of civil-service retirement legislation.

I have been conscious of the inadequacies imposed upon a group of Federal employees by the amended Civil Service Retirement Act of 1942. For that reason I was particularly interested in the editorial which appeared in the Washington (D. C.) Post on November 28. The editorial is entitled "Rank Injustice" and it should be of interest to all Members of the House.

It follows:

RANK INJUSTICE

The Senate voted unanimously last week to extend the benefits of the Civil Service Retirement Act, as amended January 24, 1942, to Federal employees retired prior to that date. Previously, restrictions on the maximum amount of annuities payable had resulted in very inadequate proportional allowances to employees in the upper salary brackets. Presumably through an oversight Congress did not follow its usual practice of granting increased annuities to eligible employees who had retired before it approved the liberalizing amendment of 1942. Consequently, this group of annuitants could not qualify for the increased allowances now available to higher-salaried employees.

The gross and utterly indefensible discrimination caused by failure to include a retroactive clause in the 1942 legislation is strikingly revealed in numerous instances. For example, a District engineer in the Public Work Agency retired before 1942, after 38 years of service, who had had a salary of $5,600 was granted an annuity of $1,403—25 percent of his salary. After passage of the liberalizing legislation of January 1942, several employes with the same positions, salaries, and terms of service retired with annuities of twice that size.

The injustice done individuals who had the misfortune to reach retirement age a few months, weeks or days too soon, has been aggravated by the action of some retired employees who by good luck or political pull have been able to qualify for reappointment and to become eligible for increased annuities. Thus the Director of the United States Census, retired in 1941 on an annuity of $1,478, obtained in June, 1942, reappointment to a post carrying less than half his former salary. When he retired again 3 months later, he was granted an annuity of $4,530—more than three times his former one. During that 3 months he paid into the retirement fund 5 percent of his salary—$44.

The cases cited are typical of the inequities resulting from the carelessness or indifference of Congress. The pressure of wartime legislative demands may partly explain, but it does not excuse, its failure to enact remedial legislation long ago. Almost 4 years have elapsed since the mischief was done. Meantime many older annuitants have died and all of them have lost benefits to which they had a moral right and which they could have used to great advantage during a period of rapidly rising prices. Since the bill just passed by the Senate does not permit retroactive payments to be made—as it should in strict justice—a further delay on the part of the House in passing this pressing relief measure will add just that much more to the unacknowledged debt that the Government owes to a very unfairly treated group of its retired employees.

## Edwin W. Kemmerer

EXTENSION OF REMARKS
OF
### HON. JESSE P. WOLCOTT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. WOLCOTT. Mr. Speaker, the country was shocked to learn of the recent death of Dr. Edwin W. Kemmerer, noted economist and monetary expert. On many occasions Dr. Kemmerer has appeared before committees of Congress and has given valuable advice on monetary matters. He has at various times, acted as monetary consultant for 14 governments in reorganizing their monetary systems. Until his retirement in June 1943, Dr. Kemmerer was Walker professor of international finance and director of the international finance section of Princeton University. His death is mourned by many Members of Congress who have been helped by his many

publications and discussions on our domestic and international economic and financial problems. I include in my remarks the following editorial from the New York Times of Monday, December 17, 1945.

EDWIN W. KEMMERER

In the death of Edwin W. Kemmerer this Nation has lost one of its foremost economists. There was a time, indeed, when he was probably better known throughout the world than any other American economist, for he was successively called in as financial adviser to so many countries that it would be tedious even to list them here.

This record shows the wide recognition of his merits. He combined a broad theoretical grasp of the problems of money, banking and credit with the practical judgment that came from his unparalleled experience. He was a clear thinker and a lucid writer. He was forthright in his expression of opinion. He remained to the end an uncompromising defender of the international gold standard as the world's only protection against a chaos of domestically managed paper currencies. Perhaps more than any other economist in this country he has steadily warned in the last dozen years against the tendency toward inflation, and now that that danger is so close upon us, his analysis and guidance will be keenly missed.

## Speedy Implementation of United Nations Charter

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, in January the United Nations Organization will be officially launched when both the General Assembly and the Security Council meet for the first time. Many immediate problems will demand attention and so great may be the pressure that the primary purpose for which the United Nations was conceived may be slighted or ignored. That primary purpose is clearly stated in article 1 of chapter 1 of the Charter: "To maintain international peace and security." This purpose must be carried out at once and with vigor. Today, therefore, the gentleman from California [Mr. VOORHIS] and I are offering identical resolutions which call for speedy implementing of article 26, chapter 5, of the United Nations Charter. That article reads:

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and economic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee, referred to in article 47, plans to be submitted to the members of the United Nations for the establishment of a system for the regulation of armaments.

The advent of the atomic bomb has magnified our needs to control the "diversion of the world's human and economic resources to armaments" beyond all powers of understanding when the Charter was drawn up last spring in San Francisco. Unilateral action would be dangerous folly, but without international controls, most of our resources will be drained off in armaments. Already our power is fortified by the greatest fleet the world has ever seen, as well as a stock pile of atomic bombs and yet in spite of appropriation cuts since VJ-day, obligations already undertaken, keep our armament spending at the appalling rate of six and a half billion dollars a month.

Russia, on the other hand, plans to build a great new fleet, and before long she will undoubtedly master the atomic bomb. Already she has a huge army, based on conscription. Britain, for the first time in her history, will continue compulsory military training. However reluctantly, the United States may be forced to follow suit.

Since national security depends on relative and not absolute military strength, the armament game is an explosive and competitive one. Each step leads to another. The air becomes poisoned with fear and war is easily kindled.

With our new powers of destruction, so vast and immediate, we have no time for fumbling. The ominous race must be halted at once by the organization which in war was conceived of as an agency to keep the peace. While success is uncertain, lack of international agreement, spells certain ruin for all. We risk nothing by attempting to limit the mad race. In fact, the speed and firmness with which the United Nations act, may determine the fate of mankind.

As the most potent nation in the world, it is proper that the United States, through its Congress, direct the attention of the United Nations to the immediate implementing of its Charter. Action should outlaw the use of the atomic bomb, abolish world-wide peacetime conscription, and set up adequate international controls and an inspection system. This, as the Charter promises, would release our resources for constructive purposes.

## A Militant Champion for Peace

EXTENSION OF REMARKS

OF

### HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. LUDLOW. Mr. Speaker, the Reverend Lee F. Soxman, pastor of the Cleveland Avenue Methodist Church, of Kansas City, Mo., has sent me a letter which in my humble opinion sounds a rallying cry that should activate every minister of the Gospel and every person who believes that Christianity has saving power to rescue humanity from the hatreds, wars, and strifes that are threatening to destroy the world. Mr. Soxman is an ardent believer in my bill, H. R. 4648, to establish a Department of Peace and Good Will and he is willing to do something more than express his sentiment. He believes in action. He believes that if we want peace, as nearly all Americans do, we must be willing to fight for it, and he would organize a fighting peace army of young people to propagandize for peace under the direction and guidance of the proposed Department of Peace and Good Will. In these critical times Mr. Soxman's letter should be read by all forward-thinking people, and I present it for printing in the CONGRESSIONAL RECORD, as follows:

CLEVELAND AVENUE
METHODIST CHURCH,
*Kansas City, Mo., December 20, 1945.*

The Honorable LOUIS LUDLOW,
*House of Representatives Office Building, Washington, D. C.*

MY DEAR MR. LUDLOW: Permit me to congratulate you sir, on your efforts in Congress in behalf of peace and especially for H. R. 4648 to which you referred last week in your radio talk. Men like yourself, with concern and vision, backed by practical plans to meet the needs of this war-cursed world, are the only hope in the days that lie ahead.

Personally, I have felt the need for a long time, for a Department of Peace in our Federal Government. We certainly need in such a department, determined and aggressive leadership that will challenge this country and the whole world to do something heroic to stave off the disaster that certainly awaits us.

We need to learn to wage peace with the same spirit of sacrifice with which we wage war, and I believe our people can be aroused to do it. They can plainly see that everything else has failed.

If we could put at the disposal of a Department of Peace only a fraction of the resources and manpower requested by the War Department, who can tell what the results might be? If, instead of training our youth to kill and destroy, we challenged them to take a year of training for peace work and then go out under Government auspices as members of an army of good will, to help meet the desperate needs of men today, don't you think youth would respond? We have sent them out with guns and bombs, why can't we appeal to them now with even more enthusiasm to go out and wage peace by helping poor, ignorant, and fearful people to a knowledge of the better life and to achieve a standard of living that will bring to them contentment and happiness? When people are happy and contented, the warmakers will be out of a job.

Wouldn't it be a glorious day for this old world if, instead of launching another silly and disastrous race in armaments, we engaged in a friendly rivalry in doing good? If we could volunteer to China, for instance, the services of a group of trained engineers and soil experts to go there and help them in the control of their rivers and the use of their land, how many millions of lives would be saved from starvation and want? Isn't it reasonable to assume that England and Russia and other countries would catch the spirit and follow our lead by establishing unselfish and cooperative relationships with places of need throughout the world? The strong must learn to help bear the infirmities of the weak and ignorant. This is indeed one world. Now we must make it a brotherhood.

Most cordially and sincerely yours,

LEE F. SOXMAN.

## Committee Appointed on St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
**HON. WILLIAM A. PITTENGER**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. PITTENGER. Mr. Speaker, on December 17 I pointed out the status of the St. Lawrence project. My remarks will be found in the Appendix of the CONGRESSIONAL RECORD, page A5602. As indicated, 76 days had elapsed since the introduction of a bill providing for the construction of the St. Lawrence seaway and power project. These remarks are merely to bring the subject matter up to date and to make a very happy report to the American people.

SUBCOMMITTEE APPOINTED BY SENATOR CONNALLY

On Wednesday, December 19, 1945, Senator THOMAS CONNALLY, of Texas, chairman of the Senate Foreign Relations Committee, appointed a subcommittee of leading United States Senators for the purpose of conducting hearings on the St. Lawrence project. This routine procedure of appointing a committee is of tremendous importance, and friends of the St. Lawrence project hailed it as a good omen. For nearly 1 year nothing has been done in the way of enactment of legislation in connection with the St. Lawrence project, and without legislation the project stands exactly where it stood 1,000 years ago. So the friends of progress and those American people who realize that tremendous advantages will come when the St. Lawrence project is completed will all have added cause to rejoice with the advent of the holiday season.

This appointment of a committee of leading and outstanding Senators will be welcomed by forty or fifty million people in the Middle West section of this country alone. These people have labored under a severe economic handicap: the lack of transportation which would add to their prosperity and to the prosperity of the whole United States as well as Canada.

But let the great molder of public opinion, the newspaper, tell the story. An account of this appointment of a subcommittee is contained in the Mesabi Daily News, one of the leading newspapers in my section, published at Virginia, Minn. Under date of Thursday, December 20, this paper contained an item by James C. Munn of the Associated Press, which item reads as follows:

SEAWAY LEGISLATION NEARING SHOW-DOWN—SENATORS NAMED TO CHART COURSE OF LEGISLATION

(By James C. Munn)

WASHINGTON.—Congressional action of the St. Lawrence seaway, stalemated by weeks of indecision, headed today for at least a preliminary show-down by early 1946.

That assurance developed late yesterday with appointment of a five-man Senate Foreign Relations Subcommittee to chart the course of pending legislation which would authorize construction of the long-debated seaway and power development.

Senator HATCH, Democrat, New Mexico, the subcommittee chairman, indicated that hearings on the measure—a joint, bipartisan resolution—would start shortly after Congress reconvenes in January.

In addition to HATCH, the subcommittee named by Chairman CONNALLY, Democrat, Texas, of the Foreign Relations Committee, included Senators HILL, Democrat, Alabama; TUNNELL, Democrat, Delaware; LA FOLLETTE, Progressive, Wisconsin; and WHITE, Republican, Maine.

Authorization to name the subcommittee was given CONNALLY more than 2 months ago. His failure to act more promptly had caused several proponents of the development—particularly Representative PITTENGER, Republican, Minnesota—to charge that "high administration leaders" were attempting to delay action on the proposed legislation for which President Truman has urged "speedy approval."

PITTENGER, one of the seaway's most articulate supporters, hailed appointment of the subcommittee "a most encouraging step."

"That shows," PITTENGER said, "That TOM CONNALLY has got the Christmas spirit. I'm glad he's done what I have so repeatedly urged."

For the last 7 weeks PITTENGER has made what he terms "a weekly report to the people on the State of the Union regarding the St. Lawrence development."

The reports were made in the form of extensions in the CONGRESSIONAL RECORD. In them, PITTENGER has been extremely critical of delays to expedite the seaway legislation.

The latter calls for a simple majority of the Senate and the House to authorize this Nation's part in the seaway's construction.

However, instead of the so-called agreement method of dealing with the legislation, the Hatch subcommittee may decide that it should be treated as a treaty and, as such, require only action by the Senate.

The Senate in 1934 turned down the treaty proposal which requires a two-thirds majority for passage. The treaty was negotiated by former President Hoover—one of six Chief Executives favoring the seaway.

President Truman, in an October 3 message, urged the Congress to give the legislation speedy approval and termed it "one of the great developments of the world."

SUBCOMMITTEE HAS TREMENDOUS RESPONSIBILITY AND AN IMPORTANT WORK TO DO

Friends of the St. Lawrence project must realize that the responsibility for making a favorable or an unfavorable report on the bill introduced by Senator BARKLEY, Democrat, of Kentucky, on October 2, 1945, which bill is known as Senate Joint Resolution 104, rests upon these five members of the subcommitee. They will make a report after hearing testimony and after getting the facts and considering every bit of evidence that is presented to them. This subcommittee report to the full Foreign Relations Committee of the Senate and that committee will then report favorably or adversely, as the case may be, to the Senate, or it will make no report at all. The important thing to know is that the friends of the project desire a favorable report from the subcommittee and a favorable report from the full committee, and affirmative action on the bill, with a favorable report by the Members of the Senate of the United States. If all of these things happen, the measure will then be considered by the House of Representatives.

WHEN SUBCOMMITTEE HOLDS HEARINGS

The American people who are familiar with the merits of this project will do well to remember that they will have to present facts to the subcommittee when it announces that hearings on Senator BARKLEY's bill will be held. The regular procedure for the friends of the project is to request the chairman of the subcommittee, Senator HATCH, for an opportunity to either give oral testimony or submit written testimony for the record, which the subcommittee will have printed when hearings are completed. You need not worry about the opponents of this St. Lawrence project. They will be on hand—they are already here. They are powerful and they will have unlimited funds at their disposal with which to fight it. That has been the history of legislative proposals dealing with this subject for generation after generation. If you want to know who these people are all you have to do is to go back to 1932 and 1933 when the Senate held hearings on this matter, and you will find every strong sectional interest opposed to the project. If you want to bring yourself up to date, you will turn to the hearings which were conducted by the Rivers and Harbors Committee in the House of Representatives in 1941 and those hearings will acquaint you fully with the opposition and its line of argument.

So it behooves the friends of the measure to make their interest known, either directly to the subcommittee or to those men and women who represent them in the Congress of the United States. No powerful groups representing untold millions of wealth and the influence which goes with it will be on hand to plead the cause of this worthy legislation. The American people will have to do that themselves if success is to crown the efforts of the friends of this measure.

## When Is Surplus Surplus?

EXTENSION OF REMARKS
OF
**HON. JACK Z. ANDERSON**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. ANDERSON of California. Mr. Speaker, many returning veterans are rapidly coming to the conclusion that so-called veterans' preference for surplus Government property is a snare and a delusion, with heavy emphasis on the delusion. A lot of previously able-bodied former servicemen will soon join the ranks of the amputees, having run their feet off in a hopeless search for apparently nonexistent surpluses.

When Congress was asked to pass and later to amend the Surplus Property Disposal Act, we were advised that there was approximately $100,000,000,000 worth of Government surplus property to be disposed of. So far, I am advised, only about $1,500,000,000 worth of surpluses have actually been sold. Where in heaven's name is the rest of it?

The following excerpt from a letter written to me by a good friend in California may be a partial explanation:

DEAR JACK: This is in reference to surplus commodities, which is the damnedest tangle of red tape and inefficiency I have ever seen. There are acres and acres of every conceivable type of product at Lathrop, Calif. Everyone admits it, that I have talked to, rows of trucks, tractors, farm equipment, pickups—many things in the original crates.

Our veterans go over there, see this equipment and try to buy it, only to find out that it is not surplus. When they do find something that is declared surplus, the tag and serial numbers already on it, they rush back to San Francisco, and after being shoved around for a number of hours, discover that it is being held for some Federal, State, or county agency, or that someone has purchased it ahead of them.

I spent the entire day in San Francisco last Friday, talking to the various men in the Veterans' Division of Surplus Commodities, men in the Department of Commerce, and the men in charge of Smaller War Plants. They are all about on the verge of resigning because almost daily they get conflicting orders from Washington on how to proceed. This information they pass on to veterans and other people who try to buy things, and it is Congress that gets the blame.

Now I do not believe that it is the intention of these gentlemen to blame Congress, they just blame it on Washington, but to the average kid, the only contact he has with Washington is his Congressman. These gentlemen I refer to would love to have a talk with you or some other Congressman, or would even welcome a congressional investigation.

The suggestions has been made, and it seems practical to me, that all power equipment, trucks, tractors, trailers, automobiles, etc., which will be shortly obsolete, be immediately declared surplus, and further that instead of giving governmental agencies the prior right to all equipment, it be broken down so that say one-third goes immediately to veterans, one-third to governmental agencies, and one-third to smaller war plants. If it is not disposed of within 30 days, or other time depending upon how often they make an allocation of surplus equipment, that the balance be declared open to dealers for the general public, and that the next batch of surplus equipment allocated then start through the same process. This would put us in a position where the veterans would have an opportunity to be taken care of on a certain amount of equipment.

As indicated by the above it becomes apparent that there just is not going to be much surplus property available as long as the Army and Navy and other Federal agencies hang on to what they have. The continued hoarding of automobiles, trucks, tractors, jeeps, building materials, and other essential reconversion commodities is becoming scandalous. I am preparing to introduce a resolution, when Congress convenes in January, to authorize a special congressional committee to investigate this unwarranted freezing of badly needed surplus property.

The Surplus Property Administration says that: "Any honorably discharged or released veteran who served in the armed forces on or after September 16, 1940, is entitled to preference in buying surplus Federal property." That is a flat statement, and I know that Congress intended it to be that way when the Surplus Act was originally approved. However, when a returning veteran writes me as follows, words and good intentions do not mean much:

I have made application to the SWPC in San Francisco for some equipment in order that I may start my former business. I had phoned, written, and called in person, but no luck. They say they do not have anything. This has been going on since October. I am 6,269 on the list which now numbers more than 25,000. From their vague answers it seems that we, the returning veterans, are not able to have any of these surplus goods. And there have been many rumors of auto dealers of SF buying huge lots of cars for something like $250 and selling them for $1,000.

I have just a small business with a potential of five or six employees. I need a vehicle, drafting tools, and such. All of that must be available; millions of men are being released and that equipment is no longer needed.

I spent nearly five long years in the service, from buck private to first lieutenant; spent 1 year in the Pacific and almost 2 in Europe. I fought for 10 continuous months in 5 European campaigns as an infantry-platoon leader, and all that time I have dreamed and planned and fought for my return to civilian life and the continuation of my former work, merely to design and build homes for Americans. You have heard this before, as far as I am concerned only you can supply the answer and the action necessary.

Mr. Speaker, this is typical of hundreds of letters that all of us are receiving every day. Congress is going to be blamed if something is not done soon to correct the situation, so let us get busy.

---

## American War Dads Adopt Resolutions on Important Problems

EXTENSION OF REMARKS
OF
## HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. HAGEN. Mr. Speaker, a short time ago I conferred with officials of the Minnesota branch of the American War Dads organization, including its able State president, Mr. R. S. Thornton, of Alexandria, Minn. Mr. Thornton also is national vice president of the American War Dads.

During that conference I was shown several resolutions that had been passed at the third national convention of the American War Dads held in St. Louis, Mo., on October 28 to and including October 31, 1945.

Because I feel that Members of Congress are anxious to know the views of the fathers of War II veterans, I am incorporating these resolutions and the aims of the splendid new national organization.

The resolutions committee report follows:

The American War Dads in convention assembled do hereby accept the challenge given to us by Gen. Douglas MacArthur, namely: "They are coming home—take care of them"; and realizing that the war is not won until the peace is won, we solemnly pledge to our service sons and daughters:

Adequate hospitalization and medical care for the sick and wounded.

A program of employment in every community.

Full support of their educational needs of every kind.

Every effort to help establish and insure a permanent peace.

To this end we submit the following resolutions as the objectives to be obtained as the militant program of the American War Dads:

"I

"Whereas the responsibility of our Nation toward our disabled veterans for their adequate hospitalization resolves itself into a single, clear-cut, paramount issue: That of providing facilities for the maximum restoration to health to the largest number of veterans in the shortest space of time; and

"Since the time has come for us to make available to these veterans not only the latest and most modern developments of the science of medicine and surgery, but also the services of the most skilled physicians of our country, especially the services of our veteran physicians. These indispensable services, however, cannot be provided if we continue to perpetuate the tragic mistakes of the past 25 years, which mistakes and practices have aroused the indignation of Congress and of every citizen of our country whose thoughts and prayers are for the tender and skillful care of those who have borne the brunt of battle: Now, therefore, be it

"*Resolved*, That our sick and wounded veterans should have available to them, under veterans' privileges, America's most experienced and skilled members of the medical profession who shall be adequately compensated for such services in line with what they would receive in private practice. To this end we insist that the doctors and nurses of all veteran facilities be removed from civil service regulations. In order to secure the highest quality of professional skill for disabled veterans, the physicians and surgeons shall be selected upon a basis of training, experience, and qualifications for the particular field for which they are engaged. Preference shall be given, when possible, to those who have served with the armed forces of World War II; and be it further

"*Resolved*, That medical services and facilities be concentrated in metropolitan areas accessible to the majority of those who will require hospitalization, or near large medical centers; and that in the location of hospitals consideration such as precedent, politics, prejudice, and expense be eliminated; be it further

"*Resolved*, That each disabled veteran be provided the privilege of choosing the locality where he wishes to be treated; and be it further

"*Resolved*, That the Congress be requested to amend the GI bill of rights to accord with the recommendations made above."

"II

"Whereas under the Selective Service Act of the United States the reemployment rights of veterans of military service automatically expire within a comparatively brief period of time from the day of termination of hostilities as declared by the President of the United States; and

"Since experience has demonstrated that discharged veterans have not been able speedily to adjust themselves to civilian life, resulting in lapsing of the beneficial provisions of existing law: Now, therefore, be it

"*Resolved by the American War Dads*, That we request the Congress of the United States to amend the reemployment rights, privileges, and benefits of the Selective Service Act so that, as amended, said period shall be not less than 6 months from date of dis-

charge or date of termination of hostilities, whichever is later.

"III

"Whereas the Southeastern Athletic Conference in May 1945 adopted a regulation prohibiting our sons returning from the armed forces, who had previously been in college, from engaging in intercollegiate athletics at any school of the Southeastern Athletic Conference unless they had attended the same school before going into the service; and since many of our sons will wish to attend a different college from the one they went to before entering the service; and since we want our sons to be allowed to participate in the entire program of any institution they wish to attend upon their return from the service, regardless of what college or university they attended before going into the armed services: Be it therefore

"*Resolved*, That the members of the Southeastern Athletic Conference be urged to take immediate action to see that our sons, on their return from service, be allowed to participate in all forms of intercollegiate athletics for any school which they may attend, and that this rule discriminating against them be immediately rescinded.

"IV

"Whereas the Administrator of Veterans' Administration has issued regulations granting institutions of education the right to charge for each veteran enrolled under part VIII such customary tuition and incidental fees as are applicable to all nonresident students, provided that said charges are not in conflict with existing laws or other legal requirements. (Sections 2 (a) (2) V B Instruction No. 6, dated April 17, 1945); and since the American War Dads vigorously oppose the action of any State institution in charging, or seeking to charge, a veteran residing in the State of that institution, a fee applicable to nonresident students, on the grounds that it is an arbitrary and discriminatory act: Now, therefore, be it, and it is hereby

"*Resolved*, That appropriate action be instituted in each State, sponsored by a War Dad chapter in each said State, whereby in appropriate legal proceedings carried to the court of last resort in said State, if necessary or required, the legal right of said institution to make such charge is finally and definitely determined; be it further

"*Resolved*, That since the attorneys general in some States have ruled that this practice on the part of State-supported schools is legal, and since the legislatures in most States will not meet again until 1947, the American War Dads do hereby instruct the National Council to set aside sufficient funds to assist any one chapter of the American War Dads who will enter suit or legal proceedings against any State-supported school in the said State to eliminate this practice, this suit being for the purpose of recording a test case; be it further

"*Resolved*, That the results of the proceedings in this suit be given publicity to every War Dad through the medium of the American War Dad magazine within 6 months from the closing date of this convention.

"V

"Whereas State-supported schools in almost every State in the Union are taking unfair advantage of the GI bill of rights, known as Public Law No. 346, and the said schools are charging the Veterans' Administration on the basis of the nonresident fee, regardless of the fact that the veteran may live in the State, and since section 1505 of Public Law No. 346 provides that any benefits derived from the said bill shall be charged against and deducted from the veteran's compensation: Be it

"*Resolved*, That the American War Dads vigorously protest this discriminatory and unfair practice on the part of State-supported schools throughout the Nation; be it further

"*Resolved*, That we demand the Veterans' Administration shall not make a contract with any school wherein the charge would be greater than that which is charged a nonveterans under similar conditions; be it further

"*Resolved*, That we commend those State-supported schools in several States which are not charging the nonresident fee for resident veterans.

"VI

"*Be it resolved*, That there shall be no discrimination to veterans regardless of rank or branch of service in the matter of furloughs pending final discharge; that War Dad chapters in each State take proper action to assure veterans the privilege of having their discharges recorded wherever they desire and that all county clerks, city clerks, and town clerks be instructed to accept for recording the discharge of persons who reside or expect to reside in their community; and that all funds received by reason of being members of the armed services be exempt from income tax and tax refunds be made to those who served in World War II providing a maximum of $500 taxes due be forgiven on incomes received while serving in the armed forces of the United States.

"VII

"Whereas the men and women serving in the armed forces of the United States have not been and are not now covered under title II of the Federal Social Security Act, as amended, during such service; and the majority of those who have been or who are now in the service are losing the benefit of wage credits already credited to them and many of those who have been discharged have already suffered losses in wage credits; and in many instances the survivors of those men and women killed in the service of their country have been deprived of benefits under the old-age and survivors insurance program which they would otherwise have received; and

"*Resolved by the American War Dads*, That the Congress of the United States of America be, and is hereby, respectfully urged to speedily enact such legislation as would provide that the men and women who have been and who are now in our armed forces be given appropriate wage credits on their old-age and survivors insurance accounts for each quarter of the whole period of their military service; and that such legislation provide for extension of coverage under old-age and survivors insurance to all those occupations not now covered by the law in order to protect the old-age and survivors insurance wage credits to be granted men and women who have been or who are now in the armed forces of the United States, and who previous to their service had no such wage credits; and that all statutes of limitations be waived in the filing of claims for lump-sum, current, or full insurance payments, and that such payments be made, calculated from the first month to which the claimant could have been entitled by filing, regardless of the date of filing, in order to prevent loss of benefits and lowering of benefit amounts now occasioned by the provisions of the Social Security Act, as amended, and in order to assure that the insurance principles inherent in the afore-mentioned Social Security Act be fulfilled, and that Congress shall make adequate appropriations.

"VIII

"*Be it resolved*, That certain American-born citizens have, since December 7, 1941, declared their loyalty to a foreign government and have refused to pledge allegiance to the United States of America; be it further

"*Resolved*, That the American War Dads do hereby recommend the vigorous and immediate prosecution of such persons by the legal authorities of the United States Government, and that all such persons found to have renounced their American citizenship, after trial before duly authorized courts, shall be deported to the country to which they have declared allegiance.

"IX

"*Be it resolved*, That the national council be requested to take action necessary to promote a more strict control of the movements of conscientious objectors from time to time as occasion may justify; be it further

"*Resolved*, That the American War Dads go on record as opposing the release of conscientious objectors from camp until the time when service men and women of the armed forces can also be released contemporaneously therewith, in order that in common fairness to members of armed forces they may have an equal opportunity and a fair chance with that of the conscientious objectors in securing peacetime employment; be it further

"*Resolved*, That the fulfillment of the foregoing resolution will also have the effect of maintaining the morale of service men and women in the armed forces.

"X

"*Resolved*, That the United States Government be urged to continue careful and complete search of all the islands of the Pacific and other war areas for men missing in action, and that adequate ships and means be forthwith supplied for this purpose to the end that missing men be rescued before hardship and starvation bring death or permanent disability, and that a copy of this resolution be sent to each chapter of the American War Dads, each Congressman, and the President of the United States.

"XI

"*Be it resolved*, That the American War Dads take the initiative in organizing a servicemen's joint committee composed of the American War Dads and all recognized veterans' organizations of this war, or previous wars, to determine upon and present to the Congress appropriate legislation of vital interest to veterans, and that similar committees be organized to handle State or local problems in each State or community.

"XII

"*Be it resolved*, That an impartial board of review reconsider the cases of all men released from military service with discharges other than honorable, and that their findings be made final, subject only to action by the President.

"XIII

"*Be it resolved*, That a continuation of the means, facilities and commitments for military and naval research be urged upon the Congress.

"XIV

"*Be it resolved*, That by God's grace and the courage and sacrifice of our sons and daughters, the military might of the Axis forces has been crushed. The American War Dads do hereby call upon all citizens to make any additional sacrifices necessary for the consolidation of our victory, which has been won at such a terrible price, and for the establishment and maintenance of just and lasting peace, and to this end we urge:

"(A) Occupation of enemy countries and replacement of long-service veterans:

"That a firm but just policy be adopted and maintained in occupying and governing Axis countries in strict compliance with the terms of surrender, including the removal from power of their war-mad leaders and the prompt and just trial by allied courts of all

those who have violated the laws of God and international treaties. We urge that adequate military and naval forces of occupation be maintained for as long a period of time as may be necessary to achieve this end; however, we further declare that in justice to those men and women who have borne the hardships and peril of battle, they should be replaced as rapidly as this can be done without jeopardizing the victory which has been won at such cost, and that the discharge of men and women having 2 years or more service as of January 1, 1946, be made mandatory, and that such replacements should be made even though this may require the continuation of the National Selective Service Act.

"(B) Support of United Nations Pact:

"We further endorse and urge the fullest support of the United Nations Security Pact on the part of the United States and the fulfillment of all our obligations thereunder in the interest of permanent peace.

"(C) Demand strong national forces:

"We further declare that this country must maintain its own strong national forces in keeping with its opportunity and responsibility for world leadership.

"(D) Maintenance of regular armed forces:

"We further declare that the strength and the use of such forces shall at all times be only adequate to carry out policies as determined by the civil, executive, and legislative branches of our Government, and that all such policies should at all times be designed to encourage on the part of all nations the settlement of all differences by peaceful methods, with fair and just treatment of all peoples and all nations.

"(E) Methods recommended for maintaining adequate manpower in regular armed forces:

"We further resolve and urge that for the maintenance of such forces as may be needed under the preceding sections the following measures should be adopted:

"(1) There should be established scales of pay and other benefits designed to encourage voluntary enlistments in our regular armed forces.

"(2) But recognizing that such adequate regular forces may not always be obtainable through the volunteer system alone, we further recommend the continuation of selective service in a modified form, to be invoked only when necessary to maintain our forces at adequate strength.

"(F) Universal training for national defense:

"We further declare that it is contrary to American principles and traditions to maintain in time of peace professional or regular armed forces comparable to those needed in time of war; nevertheless, we recognize it to be essential at this time to our national safety and world peace that we do maintain a large reserve of physically able citizens who will be readily available for service under conditions of modern warfare should such a regrettable condition arise in spite of all our efforts to maintain peace. We therefore recommend a program calling for universal training for national defense on the part of all citizens, such program to be correlated with and be made a part of the regular school and college program throughout the land and to include the further training of citizens in camps during the summer months: *Provided further*, That all such training be under the supervision of Federal authority and at Federal expense.

"(G) National Guard:

"We further recommend that the National Guard and ROTC program be reestablished and expanded, with adequate pay, equipment, and supervision as an integral part of our national-defense system.

"XV

*"Be it resolved*, That the American War Dads to hereby solemnly declare that all peoples of the earth should ultimately be united in a Federation of the World under one Federal Government, and to that end we hereby approve the principle of World Federation and request the Congress of the United States to empower the President of the United States to initiate the necessary procedure that this Nation may take the leadership in the establishment of a Federation of the World as an ultimate objective.

"XVI

"Whereas the present widespread disputes between labor and management curtail employment opportunities for returned veterans, and the resulting situation has a discouraging effect on the morale of returning veterans, in addition to being detrimental to the national economy, and the present situation is caused in many instances by improper leadership, and since ample employment opportunities for returned veterans are main objectives of the American War Dads, and the President of the United States has called a labor-management conference, with seven topics proposed for discussion, as follows:

"(A) 'General acceptance' by management of collective bargaining where workers want it.

"(B) 'Genuine acceptance' by organized labor of the right and responsibilities of management to direct the operation of an enterprise.

"(C) 'Utilization of machinery' of the National Labor Relations Act and similar State statutes.

"(D) 'Recognized and orderly procedure' in negotiating contracts, with provision for conciliation if talks are breaking down.

"(E) Inclusion of such provisions as these in agreements:

"(1) Procedure for adjustment of disputes and grievances during the life of a contract and in negotiating a succeeding contract;

"(2) No-strike, no-lock-out clauses;

"(3) When contract renewal negotiations fail, early use of conciliation, mediation, and possibly voluntary arbitration;

"(4) Settlement of grievances at the level where they occur;

"(5) Responsibility of both parties to live up to agreement;

"(6) Control of members by unions and of officials and supervisory force by management in conforming with contracts.

"(F) Lessening jurisdictional and interunion disputes; be it

*"Resolved*, That the American War Dads endorse the seven purposes outlined for the labor-management conference called by the President of the United States for an orderly settlement of labor disputes; and be it further

*"Resolved*, That a copy of this resolution be forwarded to the President and Congress of the United States and to the members of the labor-management conference, and all national labor, business, and industrial leaders, with the request that there be implemented, with appropriate legislation, the agreements reached at said conference, insofar as such decisions are in harmony with the avowed seven purposes set forth above.

"XVII

*"Be it resolved at this 1945 national convention of the American War Dads*, That it expresses its approval of the National Foundation to Honor General Dwight D. Eisenhower and the United States Armed Forces, Inc., as a living memorial.

"XVIII

*"Be it resolved*, That each chapter of the American War Dads be requested to devote one meeting of each year to each of the following major objectives of the American War Dads:

"(a) Hospitalization; (b) rehabilitation; (c) employment; and (d) education;

"and that the chapter secretary be requested to report on same to his respective State association.

"XIX

"Whereas, under present law, a widow or dependent children of a deceased veteran, who had a claim for pension denied under existing law, must file a new claim if the law is revised so as to include said dependent or widow within the scope of said law; and since many widows and dependent children are not aware that they are entitled to the benefits, and fail to file a claim for some: Now, therefore, be it

*"Resolved*, That Congress provide that in the event any future law is enacted enlarging the benefits for widow and dependent children that any application on file by any widow or dependent children for a pension, under the provisions of any former law, shall ipso facto be deemed refiled as of the effective date of any new law enlarging the basis of pensions, and that the effective date of any allowances of pensions be dated from the effective date of said new law and the automatic refiling of said application for claim.

"XX

*"Be it resolved*, That the American War Dads urge the speedy enactment of Federal legislation and the apprporiation of sufficient funds to the end that any wife or parent who has a husband, son, or daughter killed in line of duty and buried overseas shall have the right to have the body returned to the United States for burial at Government expense.

"XXI

*"Be it resolved*, That the American War Dads go on record as insisting that American prisoners of war be given such promotions in rank and increase in pay as they would have received had they been in active duty for the time they were prisoners of war, and that they be awarded a suitable badge of recognition.

"XXII

*"Be it resolved*, That we do hereby approve and endorse suitable legislation authorizing the President of the United States to present, through our Representatives in Congress, to the mother and father of each member of the armed forces of the United States who has died or hereafter dies as a result of his or her service to our country during the present war, a button or ribbon of suitable design and composition which may be worn by each such parent to signify that his or her son or daughter has made the supreme sacrifice for the Nation in order that its sacred traditions and high ideals might be sustained.

"XXIII

"Whereas the women of America, including our mothers, wives, daughters, and sisters, have rendered services to our Nation over and beyond the line of duty in every branch of our services, and thereby replacing men who have gone into all branches of the armed forces and thus have greatly aided our war effort: Be it

*"Resolved*, That the American War Dads do hereby express our appreciation of these services, and do hereby accord them every honor along with the men in the fighting ranks; and be it further

*"Resolved*, That we now have the hope that these patriotic women who have contributed so much to our war effort will support the American tradition of the sovereignty of the home; and in these homes, particularly where there are children or where both parents are employed, that they will resume their positions as wives and mothers and thus greatly tend to prevent the juvenile delinquency rampant throughout the country.

"XXIV

"*Be it resolved*, That the American War Dads do hereby request our national officers to express our faith and confidence in Gen. Omar N. Bradley, Administrator of the Veterans' Administration, and do offer our wholehearted cooperation to the achievement of his highest goal."

## Whence Come Federal Funds—Michigan Has an Answer

EXTENSION OF REMARKS
OF
**HON. EARL C. MICHENER**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. MICHENER. Mr. Speaker, just how foolish we are in thinking that money we get from the Federal Government for highways, welfare, schools, and other purposes are Santa Claus gifts is shown by the leaflet Michigan and the National Debt released by the Michigan Public Expenditure Survey. This leaflet, dealing with Federal taxes collected in Michigan in the fiscal year ending June 30, 1944, shows that this State contributed $2,370,646,239 to the National Treasury, which was $439 for every man, woman, and child, and $948 for every employed person. This compared to average contributions in the United States of $287 per person, and $618 per employed person.

But the significant thing brought out in the leaflet is that the two and one-third billions we of Michigan poured into the Federal coffers would have paid all of the expenses of the Michigan State government for more than 10 years, including the State aid extended to schools, highways, welfare and all else. That gives us something to think about.

Of course, the bulk of these moneys went to defray our war costs. We spent them willingly in supporting our fighting forces in their struggles to win victory—which came only at tremendous personal sacrifices and tremendous financial sacrifices. But now, when we are seeking to establish ourselves on sound foundations of peace, security, and prosperity it is well to look squarely at the cold dollars and cents factors in the situation. We cannot consider Federal spending as something apart from us personally. And that Federal spending is continuing—and must continue for some time—now that the fighting itself has ended. We must get a realistic perspective on that spending and must watch it if we are to avoid getting beyond our depths as a Nation, which calamity would involve us as individuals and as a State as well as a people.

We will have to pay stupendous interest charges in the years to come. Our national debt, as of June 30, 1945, was $258,682,187,410. That was $1,857 per person in the United States; it was $3,979 per employed person in the United States. But at the rate we in Michigan are called upon to pay Federal taxes, our share of the national debt was $2,826 per man, woman, and child, and $6,105 per employed person.

Michigan's total share of the interest charges on the national debt—based on what we pay in Federal taxes—was $213,403,000 as of last June. What we of Michigan contributed in interest charges alone would, according to the Michigan Survey estimates, "operate Michigan's entire State government, in all branches, for more than 11 months; or pay all State administrative, operational, and capital outlay costs for nearly 2½ years—excluding State aid; or retire the total public debt in our State—city, county, school, and so forth—in a little more than 2 years."

We think of the national debt as being far away from us, we think of Federal expenditures as coming from some mystic beneficient source apart from us, but the Michigan Survey leaflet is a reminder that we in Michigan are being held responsible for $2,826 of that debt per person; that we pay $40 per person in interest charges upon it every year. It is a reminder, too, that we are paying Federal taxes at the rate of $439 per person and at the rate of $948—nearly $1,000—a year per employed person. We, whether we realize it or not, are carrying the load—and more than our per capita share of the load.

The above language is taken verbatim from an editorial appearing in the Ann Arbor News and written by Mr. Arthur Stace, the editor. I am pleased to adopt Mr. Stace's words as my words on this particular occasion, because he presents the facts in such an understandable way.

The fact that so many demands are being made upon the Congress by the numerous municipalities, communities, and pressure groups makes Mr. Stace's editorial most timely.

## Congressman Robert Ramspeck Honored

EXTENSION OF REMARKS
OF
**HON. GEORGE P. MILLER**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. MILLER of California. Mr. Speaker, friends of ROBERT RAMSPECK who retires as chairman of the Civil Service Committee of the House of Representatives, by virtue of his resignation, paid him honor at a testimonial dinner, Tuesday evening, December 18, at the Statler Hotel.

The dinner was held under the auspices of the following AFL unions: National Federation of Post Office Clerks; National Association of Letter Carriers; Railway Mail Association; American Federation of Government Employees; National Association of Special Delivery Messengers; National Association of Post Office and Railway Mail Service Mail Handlers; National Federation of Post Office Motor Vehicle Employees; District No. 44, International Association of Machinists; National Rural Letter Carriers Association; Joint Conference on Retirement; Government Employees' Council, AFL; International Brotherhood of Bookbinders; International Federation of Technical Engineers, Architects, and Draftsmen's Unions; International Typographical Union; International Plate Printers, Die Stampers, and Engravers' Union of North America; Washington Central Labor Union; Maryland-District of Columbia Federation of Labor.

National President James B. Burns, of the American Federation of Government Employees, acted as toastmaster.

One of the high lights of the evening was the reading of the following letter from President Truman:

THE WHITE HOUSE,
*Washington, December 14, 1945.*

Hon. ROBERT RAMSPECK,
*Chairman, Civil Service Committee,*
*House of Representatives,*
*Washington, D. C.*

DEAR BOB: I do not know of a public servant more deserving of public honor than you. I wish I could join in person with the sponsoring unions who are tendering a dinner to you. It is a pleasure to extend to them and to you my hearty felicitations and warmest personal greetings.

The advances made in Government service during the decade of your chairmanship of the very important House Committee on the Civil Service have been steady and far reaching. Despite depression and economic transition, and upheaval of war, and now through reconversion to peace, the standards of public service have steadily been raised and made more efficient. No small part of the credit for this improvement is due to your vision and wise leadership.

I trust that you will find happiness and further opportunities for high service as you return to private life. I hope also that the union groups who are honoring you will continue to give their close attention and best thinking to the cause of better government.

Very sincerely yours,

HARRY S. TRUMAN.

Many Members of Congress and high Government officials were present, including Hon. Sam Rayburn, Speaker; Hon. John W. McCormack, majority leader; Hon. Joseph W. Martin, minority leader; Hon. Sheridan Downey, United States Senator; Hon. Jennings Randolph, Member of Congress; Hon. Thomas G. Burch, Member of Congress; Hon. Harry B. Mitchell, President, United States Civil Service Commission; Hon. Arthur S. Flemming, Commissioner, United States Civil Service Commission; Hon. Robert E. Hannegan, Postmaster General of the United States; Hon. George Meany, secretary-treasurer, American Federation of Labor; Hon. W. C. Doherty, vice president, American Federation of Labor.

Joining others in paying his respects to Mr. RAMSPECK was Hon. William Green, president of the American Federation of Labor.

Secretary of Labor L. B. Schwellenbach, unable to be present, wrote in part to Mr. Burns:

His efforts on behalf of a sound civil-service system will have lasting results in increased Government efficiency. His active interest in improving the lot of the Federal

worker has not only contributed to this efficiency but has brought an increased measure of material reward to a group of sincere and faithful workers.

The Honorable James A. Farley, former Postmaster General, in a wire said of Mr. RAMSPECK:

Bob RAMSPECK has been a fine public servant and I had a real opportunity to observe that during the time I served as Postmaster General. He is one of the most sincere men I ever met in public life. Will you extend to him my hearty congratulations and best wishes for continued success, health and happiness?

One of the sincerest tributes came from Edward Keating, manager of Labor who wrote:

As a rule the retirement of a Member of Congress is of no particular significance. That is not true in the case of Mr. RAMSPECK. He has industry, ability, experience, plus a breadth of vision rarely found among public men. While wishing him success in his new venture, every Progressive will regret his going.

Senator JIM MEAD, of New York, and Representative MARY NORTON, of New Jersey, both detained, paid compliment to the work of Mr. RAMSPECK during 16 years in Congress.

A handsome scroll and other gifts of remembrance were presented to the guest of honor. About 300 persons were present.

## The British Loan—Articles of Agreement

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. WHITE. Mr. Speaker, the plan which has been drawn up and agreed to by the responsible heads of our Government to further increase the national debt and the tax burden of the American people by making a loan of $4,400,000,000 to Great Britain is fraught with such serious consequences and so much uncertainty as to the future relations of our Government and the Government of Great Britain that the language of the agreement itself should be preserved for all time.

It should be preserved so that a thousand years from now future historians can turn to these pages kept in the National Archives and weigh the effect of this national folly on our country's destiny.

The text of the British agreement is taken from the New York Times of December 7, 1945:

JOINT STATEMENT REGARDING SETTLEMENT FOR LEND-LEASE, RECIPROCAL AID, SURPLUS WAR PROPERTY, AND CLAIMS

1. The Governments of the United States and the United Kingdom have reached an understanding for the settlement of lend-lease and reciprocal aid, for the acquisition of United States Army and Navy surplus property, and the United States interest in installations, located in the United Kingdom, and for the final settlement of the financial claims of each Government against the other arising out of the conduct of the war. Specific agreements necessary to implement these understandings, setting forth the terms in detail, and consistent herewith, are in the course of preparation and will shortly be completed.

2. This settlement for lend-lease and reciprocal aid will be complete and final. In arriving at this settlement both Governments have taken full cognizance of the benefits already received by them in the defeat of their common enemies. They have also taken full cognizance of the general obligations assumed by them in article VII of the mutual aid agreement of February 23, 1942, and the understandings agreed upon this day with regard to commercial policy. Pursuant to this settlement, both Governments will continue to discuss arrangements for agreed action for the attainment of the economic objectives referred to in article VII of the mutual aid agreement. The Governments expect in these discussions to reach specific conclusions at an early date with respect to urgent problems, such as those in the field of telecommunications and civil aviation. In the light of all the foregoing, both Governments agree that no further benefits will be sought as consideration for lend-lease and reciprocal aid.

3. The net sum due from the United Kingdom to the United States for the settlement of lend-lease and reciprocal aid, for the acquisition of surplus property, and the United States interest in installations, located in the United Kingdom, and for the settlement of claims shall be $650,000,000, subject to the account adjustment referred to below. This amount consists of (a) a net sum of $118,000,000 representing the difference between the amount of the services and supplies furnished or to be furnished by each Government to the other Government after VJ-day through lend-lease and reciprocal-aid channels, less the net sum due to the United Kingdom under the claims settlement, and (b) a net sum of $532,000,000 for all other lend-lease and reciprocal-aid items, and for surplus property and the United States interest in installations located in the United Kingdom and owned by the United States Government. The actual amounts due to the respective Governments for items included in (a) above other than claims will, however, be ascertained by accounting in due course, and the total sum of $650,000,000 will be adjusted for any difference between the sum of $118,000,000 mentioned above and the actual sum found to be due. All new transactions between the two Governments after December 31, 1945, will be settled by cash payment.

4. The total liability found to be due to the Government of the United States will be discharged on the same terms as those specified in the financial agreement concluded this day for the discharge of the credit provided therein.

5. In addition to the financial payments referred to above, the two Governments have agreed upon the following:

(A) Appropriate nondiscriminatory treatment will be extended to United States nationals in the use and disposition of installations in which there is a United States interest;

(B) Appropriate settlements for the lend-lease interest in installations other than in the United Kingdom and the colonial dependencies will be made on disposal of the installations;

(C) The United States reserves its right of recapture of any lend-lease articles held by United Kingdom armed forces, but the United States has indicated that it does not intend to exercise generally this right of recapture;

(D) Disposals for military use to forces other than the United Kingdom armed forces of lend-lease articles held by the United Kingdom armed forces at VJ-day, and disposals for civilian use other than in the United Kingdom and the colonial dependencies of such lend-lease articles will be made only with the consent of the United States Government and any net proceeds will be paid to the United States Government. The United Kingdom Government agrees that except to a very limited extent it will not release for civilian use in, or export from, the United Kingdom and the colonial dependencies lend-lease articles held by the United Kingdom armed forces; and

(E) The Government of the United Kingdom will use its best endeavors to prevent the export to the United States of any surplus property transferred in accordance with this understanding.

6. The Government of the United Kingdom agrees that, when requested by the Government of the United States from time to time prior to December 31, 1951, it will transfer, in cash, pounds sterling to an aggregate dollar value not in excess of $50,000,000, at the exchange rates prevailing at the times of transfer, to be credited against the dollar payments due to the Government of the United States as principal under this settlement. The Government of the United States will use these pounds sterling exclusively to acquire land or to acquire or construct buildings in the United Kingdom and the colonial dependencies for the use of the Government of the United States, and for carrying out educational programs in accordance with agreements to be concluded between the two Governments.

7. The arrangements set out in this statement are without prejudice to any settlements concerning lend-lease and reciprocal aid which may be negotiated between the Government of the United States and the Governments of Australia, New Zealand, the Union of South Africa, and India.

POSITIVE COMMITMENTS FOR UNITED STATES UNCERTAINTIES AND EVASION FOR GREAT BRITAIN

FINANCIAL AGREEMENT BETWEEN THE GOVERNMENTS OF THE UNITED STATES AND THE UNITED KINGDOM

It is hereby agreed between the Government of the United States of America and the Government of the United Kingdom of Great Britain and Northern Ireland, as follows:

1. Effective date of the agreement: The effective date of this agreement shall be the date on which the Government of the United States notifies the Government of the United Kingdom that the Congress of the United States has made available the funds necessary to extend to the Government of the United Kingdom the line of credit in accordance with the provisions of this agreement.

2. Line of credit: The Government of the United States will extend to the Government of the United Kingdom a line of credit of $3,750,000,000 which may be drawn upon at any time between the effective date of this agreement and December 31, 1951, inclusive.

3. Purpose of the line of credit: The purpose of the line of credit is to facilitate purchases by the United Kingdom of goods and services in the United States, to assist the United Kingdom to meet transitional postwar deficits in its current balances of payments, to help the United Kingdom to maintain adequate reserves of gold and dollars, and to assist the Government of the United Kingdom to assume the obligations

of multilateral trade, as defined in this and other agreements.

4. Amortization and interest:

(I) The amount of the line of credit drawn by December 31, 1951, shall be repaid in 50 annual installments beginning on December 31, 1951, with interest at the rate of 2 percent per annum. Interest for the year 1951 shall be computed on the amount outstanding on December 31, 1951, and for each year thereafter, interest shall be computed on the amount outstanding on January 1 of each such year.

Forty-nine annual installments of principal repayments and interest shall be equal, calculated at the rate of $31,823,000 for each $1,000,000,000 of the line of credit drawn by December 31, 1951, and the fiftieth annual installment shall be at the rate of $31,840,736.65 for each such $1,000,000,000. Each installment shall consist of the full amount of the interest due and the remainder of the installment shall be the principal to be repaid in that year. Payments required by this section are subject to the provisions of section 5.

(II) The Government of the United Kingdom may accelerate repayment of the amount drawn under this line of credit.

5. Waiver of interest payments: In any year in which the Government of the United Kingdom requests the Government of the United States to waive the amount of the interest due in the installment of that year, the Government of the United States will grant the waiver if:

(A) The Government of the United Kingdom finds that a waiver is necessary in view of the present and prospective conditions of international exchange and the level of its gold and foreign exchange reserves; and

(B) The International Monetary Fund certifies that the income of the United Kingdom from home-produced exports plus its net income from invisible current transactions in its balance of payments was on the average over the five preceding calendar years less than the average annual amount of United Kingdom imports during 1936-38, fixed at £866,000,000, as such figure may be adjusted for changes in the price level of these imports. Any amount in excess of £43,750,000 released or paid in any year on account of sterling balances accumulated to the credit of overseas governments, monetary authorities, and banks before the effective date of this agreement shall be regarded as a capital transaction and therefore shall not be included in the above calculation of the net income from invisible current transactions for that year. If waiver is requested for an interest payment prior to that due in 1955, the average income shall be computed for the calendar years from 1950 through the year preceding that in which the request is made.

6. Relation of this line of credit to other obligations.

(I) It is understood that any amounts required to discharge obligations of the United Kingdom to third countries outstanding on the effective date of this agreement will be found from resources other than this line of credit.

(II) The Government of the United Kingdom will not arrange any long-term loans from governments within the British Commonwealth after December 6, 1945, and before the end of 1951 on terms more favorable to the lender than the terms of this line of credit.

(III) Waiver of interest will not be requested or allowed under section 5 in any year unless the aggregate of the releases or payments in that year of sterling balances accumulated to the credit of overseas governments, monetary authorities, and banks (except in the case of colonial dependencies) before effective date of this agreement is reduced proportionately, and unless interest payments due in that year on loans referred to in (II) above are waived. The proportionate reduction of the releases or payments of sterling balances shall be calculated in relation to the aggregate released and paid in the most recent year in which waiver of interest was not requested.

(IV) The application of the principles set forth in this section shall be the subject of full consultation between the two governments as occasion may arise.

7. Sterling area exchange arrangements. The Government of the United Kingdom will complete arrangements as early as practicable and in any case not later than 1 year after the effective date of this agreement, unless in exceptional cases a later date is agreed upon after consultation, under which immediately after the completion of such arrangements the sterling receipts from current transactions of all sterling area countries (apart from any receipts arising out of military expenditure by the Government of the United Kingdom prior to December 31, 1948, to the extent to which they are treated by agreement with the countries concerned on the same basis as the balances accumulated during the war) will be freely available for current transactions in any currency area without discrimination; with the result that any discrimination arising from the so-called sterling area dollar pool will be entirely removed and that each member of the sterling area will have its current sterling and dollar receipts at its free disposition for current transactions anywhere.

8. Other exchange arrangements:

(I) The Government of the United Kingdom agrees that after the effective date of this agreement it will not apply exchange controls in such a manner as to restrict (A) payments or transfers in respect of products of the United States permitted to be imported into the United Kingdom or other current transactions between the two countries; or (B) the use of sterling balances to the credit of residents of the United States arising out of current transactions. Nothing in this paragraph (I) shall affect the provisions of article VII of the articles of agreement of the international monetary fund when those articles have come into force.

(II) The Governments of the United States and the United Kingdom agree that not later than 1 year after the effective date of this agreement, unless in exceptional cases a later date is agreed upon after consultation, they will impose no restrictions on payments and transfers for current transactions. The obligations of this paragraph (II) shall not apply:

(A) To balances of third countries and their nationals accumulated before this paragraph (II) becomes effective; or

(B) To restrictions imposed in conformity with the articles of agreement of the international monetary fund, provided that the Governments of the United Kingdom and the United States will not continue to invoke the provisions of article 14, section 2 of those articles after this paragraph (II) becomes effective, unless in exceptional cases after consultation they agree otherwise; or

(C) To restrictions imposed in connection with measures designed to uncover and dispose of assets of Germany and Japan.

(III) This section and section 9, which are in anticipation of more comprehensive arrangements by multilateral agreement shall operate until December 31, 1951.

9. Import arrangements: If either the Government of the United States or the Government of the United Kingdom imposes or maintains quantitative import restrictions, such restrictions shall be administered on a basis which does not discriminate against imports from the other country in respect of any product; provided that this undertaking shall not apply in cases in which (A) its application would have the effect of preventing the country imposing such restrictions from utilizing, for the purchase of needed imports, inconvertible currencies accumulated up to December 31, 1946, or (B) there may be special necessity for the country imposing such restrictions to assist, by measures not involving a substantial departure from the general rule of nondiscrimination, a country whose economy has been disrupted by war, or (C) either Government imposes quantitative restrictions having equivalent effect to an exchange restriction which that Government is authorized to impose in conformity with article VII of the articles of agreement of the international monetary fund. The provisions of this section shall become effective as soon as practicable, but not later than December 31, 1946.

10. Accumulated sterling balances:

(I) The Government of the United Kingdom intends to make agreements with the countries concerned, varying according to the circumstances of each case, for an early settlement covering the sterling balances accumulated by sterling area and other countries prior to such settlement (together with any future receipts arising out of military expenditure by the Government of the United Kingdom to the extent to which they are treated on the same basis by agreement with the countries concerned). The settlements with the sterling area countries will be on the basis of dividing these accumulated balances into three categories, (A) balances to be released at once and convertible into any currency for current transactions, (B) balances to be similarly released by installments over a period of years beginning in 1951, and (C) balances to be adjusted as a contribution to the settlement of war and postwar indebtedness and in recognition of the benefits which the countries concerned might be expected to gain from such a settlement. The Government of the United Kingdom will make every endeavor to secure the early completion of these arrangements.

(II) In consideration of the fact that an important purpose of the present line of credit is to promote the development of multilateral trade and facilitate its early resumption on a nondiscriminatory basis, the Government of the United Kingdom agrees that any sterling balances released or otherwise available for current payments will not later than 1 year after the effective date of this agreement, unless in special cases a later date is agreed upon after consultation, be freely available for current transactions in any currency area without discrimination.

11. Definitions:

For the purposes of this agreement:

(I) The term "current transactions" shall have the meaning prescribed in article XIX (I) of the articles of agreement of the international monetary fund.

(II) The term "sterling area" means the United Kingdom and the other territories declared by the defense (finance) (definition of sterling area) (No. 2) order, 1944, to be included in the sterling area, namely, the following territories, excluding Canada and Newfoundland, that is to say—

"(A) Any dominion.

"(B) Any other part of His Majesty's dominions.

"(C) Any territory in respect of which a mandate on behalf of the League of Nations has been accepted by His Majesty and is being exercised by His Majesty's Government in the United Kingdom or in any dominion.

"(D) Any British protectorate or protected State.

"(E) Egypt, the Anglo-Egyptian Sudan and Iraq.

"(F) Iceland and the Faroe Islands."

12. Consultation on agreement. Either Government shall be entitled to approach the other for a reconsideration of any of the

provisions of this agreement, if in its opinion the prevailing conditions of international exchange justify such reconsideration, with a view to agreeing upon modifications for presentation to their respective legislatures.

Signed in duplicate at Washington, D. C., this 6th day of December 1945.

For the Government of the United States of America,

FRED M. VINSON,
*Secretary of the Treasury.*

For the Government of the United Kingdom of Great Britain and Northern Ireland,

HALIFAX,
*His Majesty's Ambassador Extraordinary and Plenipotentiary at Washington.*

## Mike Colalillo Receives Congressional Medal of Honor

EXTENSION OF REMARKS
OF
## HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. PITTENGER. Mr. Speaker, Mrs. Pittenger and I were privileged to witness the ceremony at the White House on December 18 when six young men from our armed forces, including one from our district, were presented with the Congressional Medal of Honor by President Truman.

Among those receiving this honor was Sgt. Michael Colalillo, of Duluth, Minn. This young man was an auto mechanic in civilian life and was honored for gallantry in action on April 7, 1945, in the vicinity of Untergriesheim, Germany. The Associated Press account of the White House ceremony states:

His company was pinned down until he jumped up and led the way. He shoved ahead behind a tank, firing as he went. Then he jumped onto a tank, and, with a machine-gun mounted on top, knocked out two enemy machine-gun positions and blasted three more. Altogether he was credited with killing or wounding 25 Germans.

A TYPICAL AMERICAN YOUTH

This young man is typical of the thousands of young fellows, not only from northern Minnesota, but from all sections of our country who have served in the armed forces. Like the other five young men who were privileged to receive this special recognition from President Truman, Colalillo gave the impression of being happy that the war was over and that he was privileged to return to civilian life. As we listened to President Truman recount the exploits of Colalillo and these other young men, everyone in the audience received added emphasis to the common knowledge that these young men and the other millions who participated with them in the gigantic task of winning World War II, measured up full stature when put to the test on the battlefield. They faced their responsibility and proved true to the highest traditions of our fighting forces. Michael Colalillo and others who have returned home after the end of World War II, and those who are now awaiting discharge from the armed forces, are entitled to the grateful plaudits and appreciation of the men and women of American. We can best show our high regard for these young men by making our main objective in public and private life the winning of the peace, not only in the internal affairs of America, but in its relationship to the rest of the world. The soldiers of peace will be needed. Strong men and courageous men must furnish the leadership in this Republic and our people must be eternally vigilant if American is to be preserved for posterity as a land of freedom and opportunity. Every citizen has that responsibility and that duty. Otherwise, the war that Sergeant Colalillo and his comrades fought to win has been but an empty gesture and an idle effort. The exploits of these young men and others like them all over the world challenge us to dedicate ourselves to the patriotism of peace and to emulate them in the building of a better and greater America, the heroism of these young fellows.

PITTENGER'S WASHINGTON NEWS COLUMN

After the ceremony, I issued the following statement to the people in northern Minnesota who joined with me in congratulations to Colalillo and his family on this event which so directly concerns the people of the Eighth Congressional District:

The approach of the holiday season could not overshadow important Minnesota news in Washington today when Sgt. Michael Colalillo, of Duluth, Minn., received the Congressional Medal of Honor from President Truman at the White House at noon today, December 18. The decoration was also conferred upon five other outstanding heroes of World War II. Sergeant Colalillo was decorated for gallantry in action on April 7, 1945, in the vicinity of Untergriesheim, Germany.

The ceremony was not a public affair and was conducted in President Truman's private office, where invited guests were assembled. Included among the Army and Navy Department officials were Gen. Dwight Eisenhower, Admiral Chester Nimitz, Gen. Henry Arnold, Secretary of War Robert Patterson, and many other high-ranking Government officials.

Sergeant Colalillo was accompanied from Duluth by his close relatives attending the ceremony. There were his father, Carlos Colalillo; his two sisters and his brother Pat and wife. Minnesota guests were Congressman and Mrs. William A. Pittenger; Miss June Cobey, of International Falls; Miss Rose Smilanich, of Buhl; Myrtle Watson, of West Duluth; also Gustaf A. Nordin.

Following the ceremony the newsreel operators and the photographers were busy taking pictures. This part of the ceremony did not bother Mike Colalillo who grinned broadly when he posed with President Truman for the photographers.

It is interesting to note that only 200 men in the armed forces in World War II have received the Congressional Medal of Honor. War Department records disclose that five Minnesota men have received the decoration in World War II; Cpl. Arthur O. Beyer, of Ogema, Minn.; First Lt. Willibald C. Bianchi, whose Minnesota address was not ascertained; Pfc Lloyd C. Hawks, of Fergus Falls, Minn.; Second Lt. Donald E. Rudolph, of Minneapolis, Minn.

Those receiving the citation today in addition to Sergeant Colalillo were Master Sgt. Vito R. Bertoldo, of Decatur, Ill.; First Lt. Frank Burke, of Jersey City, N. J.; Tech. Sgt. Vernon McGarity, of Evansville, Ind.; Lt. Richard McCool, of Norman, Okla.; Capt. Robert H. Dunlap, of Galesburg, Ill.

This ceremony, Mr. Speaker, had of course, a note of sadness, because the battlefields of Europe and the world are dotted with the graves of American boys who lost their lives in World War II. That is the grim side of war. As the New Year approaches, let us resolve to do everything we can to make a repetition of this ghastly catastrophe impossible in the years to come.

COMBAT LOSSES

What I have to say is rather forcibly told in a news item which points out that approximately 325,000 Americans were killed in this conflict, and all casualties, which include the wounded, run over a million men. The following news item from the Daily Journal of International Falls, Minn., points to the fact, without elaboration, that war is a grim and ghastly thing. It reads:

COMBAT LOSSES

A combat toll six times as great as in World War I and greater than that of the combined combat deaths in all previous wars the United States has ever fought is the cost in American lives in World War II. But our forces exacted a much heavier toll of the enemy.

In their review of America's combat losses in World War II, the Metropolitan Life statisticians estimate the total to be approximately 325,000. This includes an allowance for deaths among those wounded in action and for men still carried on the rolls as missing in action, who will eventually have to be written off as killed in combat or died as a result of enemy action.

About four-fifths of our losses, or between 255,000 and 260,000 were suffered by the Army and the remaining 65,000 to 70,000 were incurred by the Navy, including the Marine Corps and Coast Guard. Of the Navy's total, about 23,000 were in the Marine Corps and about 900 were in the Coast Guard.

"Relative to their strength, however, the combat losses for the Army and Navy were more nearly equal," the statisticians report. "The Navy, including the Marines, had a combat toll appreciably greater than the total losses for all American armed forces in the First World War. This toll in the recent war was more than 20 times higher than Navy and Marine losses in the First World War, and the Navy alone since Pearl Harbor lost about 100 times more men than in the last war."

Heavy as American losses have been in World War II, even higher losses were inflicted on the enemy. In his recent biennial report, General Marshall estimated that German and Italian dead in the Mediterranean area and on the western front totaled nearly 375,000 in land operations, while Japanese battle deaths, some time before the fighting ended, were estimated at more than 1,200,000, figures well above the losses suffered by all the Allies on those fronts.

Pointing out that the United States was the only major belligerent to escape severe destruction of life or property in its home territory, the statisticians conclude that "the very size of our combat losses should spur our leaders in their every endeavor to develop with other nations a permanent world organization for peace."

We will fail those who laid down their lives for their country unless we take heed of the responsibilities that victory has brought. As the New Year approaches it is well for us to decide that these men have not died in vain and that their sacrifices, with our efforts, will make for a better and a happier world.

## Higher Education in Russia

EXTENSION OF REMARKS
OF
**HON. HERMAN P. EBERHARTER**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. EBERHARTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article on education in Russia, which appeared in the supplement of the magazine Science in its issue of Friday, November 23, 1945:

In Soviet Russia, 3,900 scientists were graduated from the colleges with the degree of doctor in the years 1937 to 1944; about 20,000 received a master's degree, according to Joseph Agroskin, vice chairman of the Committee on Higher Education in Moscow. The Soviet Government has been paying particular attention to the matter of training scientists because of the pressing need for teachers of technical subjects in the colleges due to greatly increased student body. In 1929, there were only 26,000 engineers with diplomas in all the heavy industries of Russia. But in the last 6 years, about 80,000 engineers were graduated. In prerevolutionary Russia, Vice Chairman Agroskin said, higher education was for the privileged few of the upper strata. In 1914, Russia had only 91 colleges with 112,000 students. The Soviet Government placed the entire system of higher education on new principles. Nationality and class distinctions were abolished. Education was free. All nationalities were permitted to teach in their own languages in colleges on the territory of their own national republics. Both universities and institutes were opened to all working people. As a result, there are now 772 colleges with 562,000 students.

Of these 132 are industrial institutes, 18 transport institutes, 87 agricultural institutes, 68 medical institutes, 115 pedagogical colleges, and 29 universities. In 1925, Vice Chairman Agroskin reported, there were only 17,900 professors and lecturers in all Russia's colleges. Now there are 40,000.

## Speech of Dr. Raver, of the Bonneville Power Administration

EXTENSION OF REMARKS
OF
**HON. COMPTON I. WHITE**
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. WHITE. Mr. Speaker, today as never before the West offers opportunities to our returning soldiers to make a home and build up a competence in this land of opportunity.

Under leave to extend my remarks, I include the following address by Bonneville Power Administrator Paul J. Raver before the twelfth annual meeting of the Inland Empire Waterways Association, Lewiston, Idaho, November 20, 1945:

Six months ago the Northwest, as well as the rest of the Nation, was concentrating on the postwar plan. Many plans were advanced; many of them seriously considered; some were adopted, to be put into effect the minute hostilities ceased.

The job which we are now faced is concerned with putting those plans to work or, if upon examining them in the light of present-day circumstances we find them wanting, revising them into workability. But the time for planning alone has passed. There is urgency in the present situation. Recognizing that we cannot solve tremendous problems overnight, we should have a basic pattern of relationships established upon which we can make a start.

Much has been said about the development of the Northwest. Probably there is much yet to be said. However, this development can no longer be treated as a phenomenon which we expect to see occur of its own accord sometime in the dim, distant future. If we expect our region to maintain the economic gains which it has made during the war, it cannot be left for the future. We must be ready to meet the acute interregional competition which has already begun.

The question is not one so much concerned with whether the Northwest is to be developed at all, but how. There are plenty of people in the East who are still only too willing to develop the Northwest, but upon their own terms. And I am not so sure that we are willing to accept their terms in all instances. I think we have already seen enough examples of the "cut out and get out" type of development.

Our success in shaping things as we wish to see them shaped depends upon several important "if's."

### A CHANGING WORLD

There are those, I know, who voice the opinion that they want no change—they are satisfied with things as they are. The simple fact is—that attitude will no longer work. Tremendous changes—technological, social, economic—have already taken place—not only here but throughout the world. We can't stand still, or even coast along comfortably—we must keep pace with those changes. The rest of the Nation has far too great a stake in this region to permit the "go away and leave us alone" attitude to survive.

For those who see this thing realistically—those who want to be in on the ground floor to take advantage of the opportunities we know to exist in this region, I can only say that if this industrial and economic development is to come to pass, we must work for it together.

What is to be done? What are the real needs in the situation?

First, we must recognize that, although changes have taken place as a result of the war, our essential position is not greatly different. Despite the fact that new and basic industries have come into the region, our economy is still immature largely because existing industries are neither sufficiently integrated nor diversified.

The Northwest's light metals industry, for instance, is concentrated almost entirely in the production of raw metal. The aluminum reduction plants and the one fabricating plant that have been established in the region are far too great for existing regional markets or the present population to support. Development of the alumina plants to supply the raw material for aluminum production and development of extrusion, forging and casting plants to turn the raw metal into finished or semifinished products is needed to provide full integration of the industry if the region is to hold its place as one of the Nation's light metals centers.

The need for development along these lines was never greater. Wider and more diversified industrialization is the only answer. To hold the gains we have already made, it is essential that firm bases for immediate and permanent employment and for widened business opportunity—for free private enterprise—be established.

This question of industrial development represents a fundamental gap in our regional economy as much now as it has in the past. Both Government and private business have too much investment in the present set-up to risk not giving the matter the utmost concentration and cooperative attention.

First, the plant, energy, and skills which exist in this region—and I include the new plant, energy, and skills which have come here during the war years—must be kept at work. Those that have momentarily closed down with the war cut-backs must be returned to work and our industrial machinery must be rounded out by the addition of new correlative enterprise, in order to obtain full integration. This calls for unified effort—it cannot be done piecemeal with any hope of early success. There must be an exchange of ideas and interest, freely given and freely received.

### THE EXTRACTIVE INDUSTRIES

What does an inventory of our present condition show? Historically, the extractive industries have represented the backbone of the Northwest economy. Unfortunately, although the monetary returns have been great, these extractive industries have been just what the name implies—a great deal going out with very little of permanent worth returning.

Generally speaking, the extractive industries are well developed—but even in these there is much that can be gained through diversification and wise conservation practices. With our minerals resource, for instance, traditional interest in the basic metals, gold and silver, and more recently in our nonferrous minerals for the production of copper, lead, and zinc, has overshadowed the basic need of the region for other industrial materials of mineral base. Because of the tremendous interest in these relatively high-priced minerals, too little emphasis has been placed on the more abundant sources of limestone, silicas, phosphate rock, and the like, which are basic to the development of large-scale industries in any region.

Our mineral situation can be summed up in these terms: the traditional sources of mineral materials which provided Butte with its pay rolls, the Coeur d'Alenes with mining camps, have reached a relatively low ebb because of exhaustion of the high-grade ores. The discoveries of large bodies of complex lead-zinc ores in both northern and southern Idaho may shift the center of these mining industries in the Pacific Northwest. There is little question that emphasis on nonmetallics such as those I have enumerated will create new types of mining enterprises in the Pacific Northwest. This, however, will be more akin to large-scale quarry and open pit mining than the traditional hard rock tunneling most familiar to Pacific Northwesterners.

In the forest industries, the present tendency is to make them less and less extractive in nature. The present concept of treating timber as a crop rather than as a raw material to be mined, is a healthy one and

will stand this region in good stead. Further, each year sees better integration of this industry, with more and more tendency to establish lumber remanufacturing plants in the region and proportionately less shipment of raw lumber to eastern manufactories.

In addition, there is a steady increase in byproducts industries, which may be expected to develop still further as technological processes for the use of wood wastes become available. Many of these developments have been devoted in the past few years to war purposes and the public has known little about them. But it is to be expected that they will account in the future for a good percentage of the total forest products output.

Agriculture, which employes more people than any other single industry in the Northwest, is also probably the best developed of the three major extractive industries, but there is still ample room for expansion and integration—particularly with the development of sprinkler and pumping irrigation, using the cheap and limitless power supplies now available, and by the development of our great phosphate rock deposits for fertilizer.

The related food-processing industries have only recently made any considerable strides. Previously, most of the raw products have gone to eastern points for packaging, processing, or refining; only to be returned to the West again in finished form—and the West has borne the freight both ways.

THE MANUFACTURING INDUSTRIES

From all of this, it is apparent that in the second section of this inventory—the manufacturing industries—our greatest need for growth and development lies. Even with substantial wartime growth in certain of the heavy industries, this region is still far behind the Nation in manufacturing, and it is here that most of our relative immaturity exists.

Some of the heavy industries which have come here, in all probability, will remain; but there is good reason to be dubious about more of them unless we hasten to fill in the blank areas in the over-all industrial pattern. The region continues to lack light industries. It is upon these that much of our success in integrating the extractive industries within the region and the maintenance of the heavy industries will depend.

I cannot emphasize too strongly the need for building upon our resources, coupled with improving the situation for both heavy and light industries—since the end result of these developments will be new opportunities for business enterprises; for the advancement of science and technology and for the absorption of skilled labor into our economy.

THE SERVICE INDUSTRIES

Finally, there is the matter of service industries. Fundamentally, these are dependent upon an employment base provided by the extractive and manufacturing industries. A healthy, progressive development of our regional basic industries will, in turn, stimulate expansion in the service industries in tune with national growth and will thus contribute toward full employment and a rising standard of living.

This integration of industry of which I speak depends to a great extent upon another serious factor. That is, population. We may think, as a result of evident overcrowding in our congested production areas, that we are already over-populated. Actually, that is far from the truth. The new population which has come into this region during the war is probably one of our most valuable assets. The over-crowding we have seen has not resulted from the fact that the region cannot absorb more new people. More accurately, we were not ready to receive them when the emergency arose. From now on, there will be a resettling process which will relieve the congestion, but let's hope and pray that the resettlement takes place right here, not in some other part of the country.

There is no single factor which has more responsibility in maintaining and increasing the value of fixed investments of every type than a steadily growing population. We need these new people for their skills. We need the increased labor force we have accumulated during the war years in order to consolidate and retain the industrial gains which have been made during the past 5 years.

MARKETS BEGIN AT HOME

But, most important, we need these people because people mean markets—home markets. Any good economist will tell you that while export markets are wonderful to envision, a sound economy cannot be built unless home markets are first created. One of the great stumbling blocks to economic progress in the Pacific Northwest has been the relatively low density of population, with consequent lack of local or home markets.

The result of this situation has been literally to force us to ship our timber, mineral, and agricultural resources, largely in their raw state, to esatern markets. This will tend to decrease, if we can retain a major portion of our war-increased population and continue to add to that by attracting new population in the years to come. In so doing, we will have taken an important step toward creation of local markets commensurate with our natural resources and our ability to produce.

In the field of agriculture, the Pacific Northwest is in a particularly advantageous position. Although employment in agriculture throughout the country has for years been on the decline and will probably continue so as new mechanical devices are developed, we in the Pacific Northwest, with our emphasis on irrigated agriculture and the development of new agricultural lands, can confidently look for continued expansion, even in the face of rapid mechanization.

It is expected that in the Columbia basin project alone when it is completely developed an additional 75,000 farm workers can be taken care of. While the project is in the process of development, there will most certainly exist an important stimulus to manufacturing and the general economic development of the Pacific Northwest.

A region such as the Northwest does not change its basic pattern overnight. Thus it seems reasonable to suppose that in the immediate future we can expect approximately the same distribution of jobs that existed immediately before the war. At that time, manufacturing occupied 21 percent of the workers in Oregon and Washington; extractive industries, including agriculture, forest products, mining and fishing, occupied 19 percent, and the various service industries accounted for the remaining 60 percent.

We need feel less concern about the development of jobs in the service industries, if the necessary expansion in agriculture and the basic industries takes place. The major problem will be to open ever-widening opportunities for new workers in the extractive and manufacturing industries.

NEW POPULATION

That it is entirely possible to take care of these new workers is indicated in a report of the Federal Reserve Bank of San Francisco Monthly Review for February of this year. A survey of Oregon and Washington manufacturers indicated that in 1939 they employed approximately 183,000 persons. Employment by this same group in 1943 reached a peak of 451,000 workers. They expect to employ in the immediate reconversion period some 246,000 persons. This means an increase of 63,000 employees over 1939. A proportionate increase throughout the entire region and continuing past the reconversion period can soon exhaust the immediately available labor pool.

Consideration of all the foregoing objectives—integration and diversification of industry, growth and spread of population and expansion of home markets—leads to the examination of still another step.

THE TRANSPORTATION PROBLEM

Our transportation conditions in general must be improved with an accompanying adjustment in the freight-rate pattern for the region. The existing general body of rates applicable in this region was developed to facilitate the shipment eastward of raw materials and semifinished commodities and the movement westward of manufactured goods. These, in turn, are distributed locally within the region by wholesalers and branch houses on a system of distributive rates. One point at fault in this system has been that the rates for wholesalers have not necessarily been built to fit the needs of manufacturers, since the latter generally wish to market over much wider areas than jobbers.

Modern water transportation on the Columbia River system can contribute its part to the needed adjustment by furnisning an improved type of transport service. We must recognize, however, that the influence of the water carriers should not be limited merely to river bank communities. Through proper interchange facilities and the establishment of joint-through routes and rates by water lines and land carriers, the benefits of navigation can be reflected to interior points and localities situated away from the river's edge.

The development of these new routes and rates must inevitably contribute to a greater diversification of industry and will afford the region an opportunity to make better use of its labor and raw materials.

Earlier I referred to a continuing lack of light industries in the region and indicated that these are essential to the diversification which will help us keep our heavy industries in operation. I would like particularly to note the lack of home-owned, home-operated light industries, as contrasted to branch plants. Studies now being made by the Bonneville Power Administration indicate that branch plants may be more favored by existing freight rates than indigenous industries. This is evidently true, because the branch plant will generally be established to conform to an existing rate pattern. When other market areas are to be supplied, additional branches will be set up to care for them. Conceivably, the locally owned, locally operated small industry might wish to market throughout the far West from a single plant located in the Northwest. Our studies indicate that existing freight rates, from this point of view, are not designed to aid in marketing over such a wide area.

It should be clearly understood that I have not raised this point to argue against the establishment of branch plants, the need for which and the reasons for which are quite generally accepted. It is our belief, however, that such industries should not have arbitrary factors working in their favor to the detriment of locally developed plans.

So much for the "if's."

WAYS AND MEANS

We have seen that if the three basic types of industry can be properly diversified and integrated, and if our population gains lead to expanding local markets, and if our transportation picture is corrected, we can be well on the road to a sound regional economy. For a few moments, then, I would like to discuss ways and means.

Most of us here, I am sure, are aware of the steadily increasing interest in industrial research. Time and again we hear that upon the development of our scientific technology the future welfare and the security of this country depend. We know that research and experimentation were largely responsible for the developments by which we were able to win the war. They will most certainly be no less important in winning the peace.

The basis of the scientific process is reproducible experiment. It is the accepted scientific method and when applied to obtain a particular understanding of our environment, it is called "scientific research."

The importance of scientific research has been well stated by Frank A. Howard, president of the Standard Oil Development Co. He has this to say:

"New industries and the advancement of old industries depend first of all on increase in the sum of human knowledge—and that, of course, is the function of scientific research. But they depend even more on the new application of existing knowledge—and that is development. The amount of scientific knowledge already available which ought to be applied to an industry, and has not yet been applied, is almost always far greater than the new contributions to human knowledge which any industrial research organization can hope to make. Therefore, industrial research is mainly development work. The third component of industrial research is invention.

"These three—scientific research, development and invention—are the components of technical progress in industry. It is the function of industrial research to harness the three components in a sustained common effort, and to keep the effort headed in the right direction."

This matter of industrial research is something in which private industry and government can share with profit—profit to industry in the ordinary sense of increased financial returns—profit to the Government in building an increasingly stronger national economy and hence an increased over-all national strength and security.

The Bonneville Power Administration, as a development agency of the United States Government, has entered into a limited program of cooperative research with a number of institutions of higher learning in this region. I would like to give you a few of the details of this program to illustrate my point.

Under basic cooperative agreements with Oregon State College, Washington State College, University of Washington, the State College of Montana, and Linfield College in Oregon, some 18 research projects are being undertaken. Some of them have to do with agricultural problems involving such things as sprinkler irrigation, farm refrigeration, and preservation of forage crops; others are concerned with electric house-heating methods of various types and one is exploring the possibilities in water treatment by ozone.

Further, the Bonneville Power Administration is encouraging research into industrial problems having to do with basic raw materials. For instance, we feel that one of our chief problems in the Pacific Northwest has to do with industrial carbons. Until recently, in this region, coal mining—for instance—has been relatively unimportant. Coal generally has been thought of as a domestic fuel rather than as an element for industrial and manufacturing operations. With increased industrialization of this region, there is need for a long-range research program into our carbon supplies so that low-cost, adequate materials will be available to sustain the industries we are urging to come here.

There is critical need for a comprehensive research program involving exploration, assaying, laboratory and pilot-plant testing for both the nonmetallic as well as the metallic resources of the region. Every citizen of the Northwest should demand and support further scientific exploration and development of our vast mineral resources. This region has been too long neglected from this point of view and both Federal and State agencies should expand their programs considerably if we are to lay a foundation for new industries in the Northwest. This is equally important in the field of chemicals, especially those concerned with the electrochemical industries.

A major interest of the Bonneville Power Administration in this encouragement of industrial research, in addition to its desire to see regional industrial development progress as rapidly as possible, lies in its obligation to the taxpayers of this country to do everything in its power to make the huge Federal investment pay out.

While we have not yet felt the full effect of the anticipated cut-backs in power demand, it is reasonable to expect that something in the nature of 600,000 kilowatts of power will become available for remarketing.

Therefore the problems which we, as a public enterprise, must face are in many ways similar to those which now engage those of you who are in private enterprise. And I firmly believe that the end we are both seeking is identical. We want a strong and prosperous Northwest and a strong and prosperous nation.

In the Bonneville Power Administration, we entertain no doubts whatsoever as to the ability of this region to work things out and to achieve that end. From our own point of view, on the basis of preliminary estimates, we believe that our cut-back losses can be completely offset within 5 years—even that additional capacity from new projects in the Columbia Basin will be sought before that time.

### MULTIPLE-PURPOSE DEVELOPMENT

Actually the possibilities for future multiple-purpose development of the water resources of the region are nearly limitless. The entire program for the physical and economic development of the Northwest is based primarily on making the fullest use of the rivers of the region.

Multiple-purpose development of the water resources of the Columbia Basin will provide improved transportation facilities on the Columbia and Snake Rivers. It will provide irrigation water for the reclamation of several million acres of new land and it will provide almost unlimited quantities of low-cost power for use in the region's industries, as well as on farms and in homes.

But the basic physical development of Northwest resources and the related full development of a balanced industrial and agricultural economy depends primarily upon some form of over-all regional design for leadership, cooperation, and coordination of developmental activities. To be genuinely effective, all of the major development agencies of the Columbia Basin and the Pacific Northwest must be made to fit into this design without overlapping and without leaving gaps. Each should contribute according to the special skill or responsibility for which it was created and each must function cooperatively with the other agencies engaged in this development.

But mere cooperation is not enough—it is passive. Development must have some kind of management if it is to progress and to produce the highest results when they are needed and due. In other words, to get the job done and done properly it is first necessary to fix over-all responsibility; and second, to furnish the responsible organization with sufficient authority to carry out its program.

### REGIONAL DEVELOPMENT IS REGIONAL BUSINESS

Regional development is, after all, regional business. It is, therefore, only reasonable to admit that in carrying out its functions the developmental organization must have business attributes and operate under some type of business or corporate character. Without management of some kind, given the necessary responsibility and authority, we can only expect a piecemeal type of development, producing totally inadequate economic and financial returns.

Granted that within their own limited fields of authority, existing agencies are producing with moderate effectiveness, it is still plain that for lack of concerted effort on the part of Federal bureaus, State agencies, and other institutions concerned, the real progress for which we are looking remains to be achieved. We must have a single, unified, and clear-cut set of objectives, based upon an integrated plan. Both Federal and State investments in the region must be calculated and sound to eliminate needless waste of the taxpayers' money. Construction must be both economical and timely and project operations must be efficient.

Without management of some kind the full force of our efforts cannot be realized because it is not a force moving steadily in the most desirable direction. Too often we find one component canceling or offsetting another. We cannot achieve the progress we desire when special interest is pitted against special interest in unnecessary conflict—with area against area, resource use against resource use, Federal and State Government, public and private enterprise, capital and labor interests alined against one another. Our strength must be united to move toward the common goal.

We must realize that Columbia-Snake River navigation is not in conflict with Snake Basin irrigation; that low-priced power is not inimical to low-cost irrigation anywhere in the Columbia Basin or in the Pacific Northwest; that it is not a matter of McNary Dam or Foster Creek Dam, but of both; that benefits of navigation, reclamation, power and other products of multiple-purpose development can be distributed equitably throughout the Pacific Northwest.

### MACHINERY FOR COOPERATION

There must be machinery for cooperation—for action. This means again that there must be vision, leadership, and management. And by this I mean democratic management. The management must be seated in and accessible to the region, its States, its industries, its citizen groups, and its people at large. It must be responsive to their individual needs and aspirations. It must be situated properly to hear just such representative groups as the Inland Empire Waterways Association.

Here, however, I want to make particularly clear that such citizen groups should themselves maintain their own democracy; they should represent the common interest in their particular fields. They should not be taken into camp—as so often has happened—by the special interests that "join" them, help to support them, and ultimately exact the price of that support.

### A POSSIBLE PROGRAM

The answer may be a "valley authority"—but one adapted to the peculiar strengths and needs of the Columbia Basin. At least, the valley-authority idea should not be ruled out by special interests before the people of the region have had adequate opportunity to study the problem and arrive at some conclusions of their own or some alternatives that will accomplish the same results. The answer, it is true, may lie in some other kind

of regional organization, but it must be an organization that will provide the desired democratic management.

At the Bonneville Power Administration we have our own ideas as to minimum and optimum requirements. We don't ask you to take them as your own. We do hope you will consider the problem in a positive and constructive way from the standpoint of your own interest in river development, the interest of the whole Pacific Northwest and the interest of the Nation. We hope that you will contribute your ideas and support to the kind of an organization that you believe can work for all of these interests.

We hope that you will focus on the real issue—of timely and profitable regional development through sound investment under efficient and democratic regional management, as opposed to uncoordinated and delayed development without central plan and management.

We hope, also, that you will focus on the real objectives of such regional development (1) to create new taxable wealth, (2) provide new jobs in new industries for new people, and (3) raise the standard of living of all.

If the Pacific Northwest will adopt this organized-development objective and move toward economic maturity, it will do so in the interest not only of its own prosperity and well-being, but in that of the Nation as a whole. Beyond that, it will have made a material contribution to the peace and prosperity of the whole world—which inevitably is depending upon the United States for the maintenance of world economic stability.

Let us look at our part of the problem objectively, and work cooperatively to accomplish our objectives effectively.

## Curbstone Lament

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. BIEMILLER. Mr. Speaker, from time to time I have brought to the attention of the House the serious crisis that exists in housing for veterans. I wish to insert in the RECORD a poem by Ye Old Vette which appeared recently in Army Times. I think it quite properly portrays the attitude of veterans on this very vital question:

CURBSTONE LAMENT

(Ye Old Vette in Army Times)

Ah, chill were the Normandy fox holes,
And bitter and dank was Attu!
But far more disturbing
Is life on this curbing,
Where the cold is fast turning us blue.

The housing committees are buzzing,
But though their proposals sound fine,
There's no satisfaction
In words without action—
It's shelter we need, me and mine!

My wife has turned suddenly frigid,
The winter winds wrinkle her face,
Her once-fetching dimples
Are lost in goose pimples—
Can't somebody find us a place?

The building authorities holler,
"Priorities keep our hands tied!"
And we've been unable
To locate a stable
Or Chic Sale that's not occupied.

All vets, states the FHA's Blandford,
Should "double up" now without fuss;
But letters from mother
And my younger brother
Say they plan to move in with us!

The landladies laugh at our misery,
The future's appallingly black,
And Christmas is coming;
We're plumb out of plumbing—
O Santa, please bring us a shack!

Four walls and a roof are sufficient,
Just cardboard—we don't hope for brick.
I've begged and petitioned,
For my wife's heir-conditioned,
And we've got to be off the streets quick.

Dear Congress, I'm not a brass monkey,
And I long to defrost my poor spouse.
Be assured my selections
For next year's elections
Will be men who can find me a house!

## Proposed Columbia Valley Authority

EXTENSION OF REMARKS
OF
### HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

*Friday, December 21 (legislative day of Wednesday, December 19), 1945*

Mr. MITCHELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief statement by me relative to Senate bill 1716, proposing to create a Columbia Valley Authority. I also ask that a copy of the bill be printed in the RECORD. The statement is in explanation of the changes Senate bill 1716 makes in Senate bill 460, which was previously introduced by me and which likewise had for its purpose the creation of a Columbia Valley Authority.

There being no objection, the statement and Senate bill 1716 were ordered to be printed in the RECORD, as follows:

Mr. President, S. 1716 supplants my previous bill, S. 460, and would create a Columbia Valley Authority.

Principal differences between the old and the new CVA bill include the following:

1. Sections 5 and 6 of S. 460 concerning the National River Basin Development Board and national coordination of CVA by the Board, have been deleted. S. 1716 would establish an independent CVA responsible directly to the President and to Congress in the same manner as the Tennessee Valley Authority.

2. The provisions for the creation of a Columbia Valley Advisory Council in S. 460 have been deleted, and in lieu thereof section 5 of the new bill authorizes the CVA to form advisory committees for regular consultation with labor, agriculture, business, and Government.

3. Section 10 (b) of S. 460 authorized the CVA to obtain a transfer of any project or property of the United States in the Columbia Valley region merely by requesting such transfer. Section 9 (b) of S. 1716 permits such transfers to be made only by the President.

4. Section 10 (f) of S. 460 required the CVA to operate through other Federal departments and agencies so far as practicable. This provision appears too restrictive and better results should be obtained if the CVA is free to determine whether a particular activity should be conducted by itself, through other Federal agencies or through States or local institutions. Section 10 (d) of S. 1716 leaves it optional with the CVA to conduct any activity either directly or through any agency, depending upon which will best achieve the desired result.

5. Section 1 (d) of S. 460 was intended to protect vested water rights and the existing system of appropriation of water under State laws. To remove the doubts of irrigation interests, section 1 (d) has been redrafted in S. 1716 and now conforms almost word for word with section 8 of the Reclamation Act of 1902, and it safeguards both existing water rights and State laws for the appropriation of water.

6. Section 12 of S. 1716 is entirely new and it substitutes for the corresponding reclamation provisions of S. 460, the Federal reclamation laws.

7. Section 13, relating to land settlement with preference for veterans, has been expanded to include a definite land program which was only handled generally in S. 460.

8. Section 20 of S. 460, relating to the regulation of river obstruction and stream pollution, has been deleted. No corresponding provision is included in the new bill.

9. Section 20 (a) of the new bill spells out in more detail the uses to which the CVA may put its revenues.

10. The first sentence of section 22 recognizes the right of the CVA to perform construction work by private contract, although the CVA is not required to use that method of construction exclusively.

S. 1716

A bill to establish a Columbia Valley Authority to provide for integrated water control and resource development on the Columbia River, its tributaries, and the surrounding region in the interest of the control and prevention of floods, the irrigation and reclamation of lands, the promotion of navigation, the providing of employment, the strengthening of the national defense, and for other purposes

*Be it enacted, etc.*, That this act may be cited as the "Columbia Valley Authority Act."

DECLARATION OF POLICY

SEC. 2. In order to safeguard the navigable waters in the Columbia Valley region and to promote navigation, to provide for the control and prevention of floods and the reclamation of lands, and to encourage the fuller development and utilization of the resources of the region, all for the purpose of fostering and protecting commerce among the several States, strengthening the national defense, conserving the water, soil, mineral, and forest resources of the Nation, relieving unemployment, and promoting the general welfare of the United States, it is hereby declared to be the policy of the United States that—

(a) The Federal Government shall establish and maintain a broad program of integrated water control and resource development for the Columbia Valley region, consisting of that portion of the Columbia River, its tributaries, and watershed which is within the boundaries of the United States, those portions of the States of Oregon, Washington, and Idaho which are not within such watershed, and such additional adjoining territory as may be related to or materially affected by the development consequent to this act, and shall consult and negotiate, and, through the State Department, may agree with the Dominion of Canada or any Province or political subdivision thereof concerning the conservation, utilization, and control of the waters of the Columbia River Basin.

(b) The administration of such a multipurpose program shall be entrusted to a Federal regional agency.

(c) Such a regional agency—

(1) shall recognize the doctrine of beneficial consumptive use of water, and in the event of any conflict between the purposes for which the waters of the Columbia Valley region may be used, such waters shall be devoted to (I) domestic, irrigation, mining, and industrial purposes; (II) flood control; (III) navigation; and (IV) power, in that order of priority;

(2) shall acquire the electric or water system of any municipality only if such acquisition is agreeable to the municipality;

(3) shall make its power and water projects collectively self-supporting and self-liquidating;

(4) shall recognize and utilize to the fullest possible extent the authorities, advice, assistance, and cooperation of the people of the region and their public and private organizations—local, State, and Federal.

(d) No provision for works of irrigation in or under this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State relating to the control, appropriation, use, or distribution of water used for domestic, irrigation, mining, or industrial purposes, or any vested right acquired thereunder, and the Corporation, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any land-owner, appropriator, or user of water in, to, or from any interstate stream or the water thereof: *Provided*, That the right to use of water acquired for irrigation under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right: *Provided further*, That nothing in this subsection shall limit the authority of the Corporation to acquire by purchase, lease, condemnation, exchange, transfer pursuant to section 9 of this act, or donation, real or personal property, or any interest therein.

COLUMBIA VALLEY AUTHORITY

SEC. 3. (a) To carry out the purposes and policy of this act, there is hereby created a body corporate which shall be known as the "Columbia Valley Authority" (hereinafter referred to as the "Corporation") and it shall be an instrumentality of the United States. The Board of Directors first appointed shall be deemed the incorporators, and the incorporation shall be held to have been effected from the date of the first meeting of the Board.

(b) The Corporation shall maintain its principal office at a convenient place centrally located in the territory in which its activities are conducted. Upon selecting the location of its principal office, and in the event it later makes a change in such location, the Corporation shall file with the Secretary of State public notice of such selection or change.

DIRECTORS OF CORPORATION

SEC. 4. (a) The Corporation shall be directed and controlled by a board of three directors, who shall be appointed by the President, by and with the advice and consent of the Senate. In appointing the members of the Board, the President shall designate the chairman. All other officials, agents, and employees shall be designated and selected by the Corporation. All matters of policy shall be considered and determined by the Board of Directors acting as a board. Each member of the board, before entering upon the duties of his office, shall subscribe to an oath (or affirmation) to support the Constitution of the United States, and to perform faithfully and impartially the duties imposed upon him by this act. Each director shall maintain his residence in the Columbia Valley region.

(b) The terms of office of the members first taking office after the approval of this act shall expire as designated by the President at the time of nomination, one at the end of the third year, one at the end of the sixth year, and one at the end of the ninth year after the date of approval of this act. A successor to a member of the Board shall be appointed in the same manner as the original members and, except for instances in which subsection (c) of this section is applicable, shall have a term of office expiring nine years from the date of the expiration of the term for which his predecessor was appointed.

(c) Any member appointed to fill a vacancy in the Board occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

(d) Vacancies in the Board, so long as there shall be two members in office, shall not impair the powers of the Board to execute the functions of the Corporation, and two of the members in office shall constitute a quorum for the transaction of the business of the Board.

(e) Each of the members of the Board shall be a citizen of the United States and shall receive a salary at the rate of $15,000 a year, to be paid by the Corporation as current expenses. Members of the Board shall be reimbursed by the Corporation for actual expenses (including traveling expenses) incurred by them in the performance of the duties vested in the Board by this act: *Provided*, That they may receive a per diem of $10 per day in lieu of actual subsistence expenses. No member of said Board shall, during his continuance in office, be engaged in any other business, but each member shall devote himself to the work of the Corporation.

(f) No director shall, during his continuance in office, have a financial interest in any public-utility company engaged in the business of generating, transmitting, distribution, or selling power to the public; nor in any holding company or subsidiary company of a holding company as those terms are defined in the Public Utility Holding Company Act of 1935; nor in any business that may be substantially affected by the success of the Corporation.

(g) Any member of the Board may be removed from office at any time by the President or a concurrent resolution of the Senate and House of Representatives.

COOPERATION WITH STATE AND LOCAL AGENCIES

SEC. 5. The Corporation, in carrying out the programs authorized in this act in accordance with purposes and policies set forth herein, and particularly section 2 (c) (4), shall develop formal and informal procedures by which the advice, assistance, and participation of the people of the region and their State and local governments and organizations, public and private, shall be obtained to the fullest possible extent to assist the Board of the Corporation in the formulation of policies designed to carry out the basic provisions of this act. To this end the Corporation shall establish procedures for regular consultation and interchange of views on matters of policy with one or more representatives of each of the States of Idaho, Montana, Oregon, and Washington (as designated by the respective Governors thereof), representatives of the business, agricultural, and labor interests of the region, appropriate officers of representative local and State agencies and institutions, with which the Corporation has cooperative arrangements, contracts, and agreements, and representatives of the general public of the region. Such designated representatives and officials shall receive the amount of $10 per day for subsistence expenses, and their actual travel expenses for the periods during which they consult with the Corporation away from their regular places of work.

CORPORATE POWERS

SEC. 6. Subject to the provisions of this act, the Corporation—

(a) Shall have succession in its corporate name;

(b) May adopt and use a corporate seal which shall be judicially noticed;

(c) May adopt, amend, and repeal by-laws;

(d) May sue and be sued in its corporate name and may settle and adjust claims held by it against other parties or persons and by other parties and persons against it;

(e) Shall have power to acquire, by purchase, lease, condemnation, exchange, transfer pursuant to section 9 of this act, or donation such real and personal property and any interest therein, including water rights, and may sell, lease, or otherwise dispose of any real and personal property and any interest therein, as in its judgment may be necessary or appropriate in carrying out the purposes of the Corporation under this act or under any other law of the United States, subject to the following:

(1) The provisions of section 355, Revised Statutes (40 U. S. C. 255), as amended, other than the provisions contained in the last paragraph of said section, shall be inapplicable to acquisitions by the Corporation.

(2) The Corporation may not acquire the electric or water system of any municipality through the exercise of the power of eminent domain if the municipality opposes such acquisition: *Provided*, That the foregoing shall not preclude the Corporation from exercising the power of eminent domain to acquire an easement for a right-of-way over, under, or across a municipal electric or water system or portion thereof for the electric or water transmission system of the Corporation, nor shall it preclude the Corporation from acquiring any such system or part thereof when the construction or operation of a dam or reservoir by the Corporation will render useless the system or the part thereof sought to be acquired.

(3) Except as provided in section 15 (e) of this act, the Corporation shall not dispose of any real property on which is located a permanent dam, hydraulic power plant, or munitions plant heretofore or hereafter constructed by or on behalf of the United States or the Corporation, or which has a value in excess of $1,000,000.

The Corporation may exercise the power of eminent domain in carrying out any of the purposes of this Act, except as otherwise provided in this section and section 13 hereof. All condemnation proceedings shall be had in the name of the Corporation. In connection with any such proceeding, the Corporation shall have the rights conferred upon the United States by the act of February 26, 1931 (46 Stat. 1421), and upon the Tennessee Valley Authority by section 25 of the Tennessee Valley Authority Act of 1933 (48 Stat. 70), the provisions of both of which are hereby declared to be applicable to proceedings brought by the Corporation in its own name to the same extent as though it were expressly mentioned therein, except insofar as they are inconsistent with this section, and are declared also to be applicable to proceedings for the condemnation of personal property in the same manner as proceedings for the condemnation of lands, easements, or rights-of-way: *Provided*, That commissioners shall receive such compensation as the court deems reasonable, including a per diem allowance in lieu of subsistence expenses while away from their homes for time actually spent, and their actual traveling expenses incurred in performing their duties as commissioners: *Provided further*, That the court may order an

award in favor of a minor, insane person, or incompetent person to be paid to the natural guardian of, or directly to such minor, insane person, or incompetent person. Title to all property, with the exception of that owned by the United States and entrusted to the Corporation as agent of the United States, shall be taken in the name of the Corporation. Conveyances of real and personal property, or interests therein, shall be in the name of the Corporation or the United States of America, depending on the holder of the title, and may be by warranty deed, bill of sale with warranty of title, or otherwise, which may be executed by any director, or by such other person or persons as the board may designate, such designation to be filed with the Director of the Division of the Federal Register, the National Archives, and to be published in the Federal Register.

(f) Shall have power to acquire, without reimbursement, any properties defined as surplus under the Surplus Property Act of 1944 (Public Law 457, 78th Cong.), and to maintain, repair, alter, use, and operate such properties and any other properties which the United States may place in its custody, whether or not for the purposes of this act, until other proper disposition be made thereof.

(g) Shall have power to produce, transmit, sell, and dispose of electric power and water, as hereinafter specified.

(h) Shall have power to purchase and acquire such insurance as it deems necessary to appropriate to carry out the powers now or hereafter conferred upon it by law.

(i) Shall have power to enter into such contracts and agreements and to exercise such powers and do such things as it may determine to be necessary or appropriate to carry out the powers now or hereafter conferred upon it by law.

VENUE AND JURISDICTION

SEC. 7. The Corporation shall be held to be an inhabitant and resident, within the meaning of the laws of the United States relating to the venue of civil suits, of the judicial district in which its principal office is located at the time of the commencement of suit. The district courts of the United States shall have original jurisdiction, without regard to the amount in controversy, over any proceeding brought by or against the Corporation. Any proceeding brought against the Corporation in a court of any State may be removed by the Corporation to the district court of the United States for the district in which the proceeding is pending, and, to effect such removal, it shall not be necessary that any other party or parties defendant join in the petition for removal. Except as otherwise provided herein, the procedure for removal shall be according to the applicable laws of the United States relating to removal.

SUBMISSION OF PLANS TO THE PRESIDENT AND CONGRESS

SEC. 8. (a) The Corporation is hereby authorized and directed, after giving due consideration to existing surveys and plans relating to water control and resource development for various purposes, conducting such additional surveys and investigations as it deems necessary or proper, and enlisting the advice and assistance of appropriate local, State, and Federal governmental agencies, educational institutions, and private organizations, to formulate and report to the President and Congress with the utmost expedition, and in any event not later than 2 years from the enactment of this act its recommendations for the unified development of the Columbia Valley region in accordance with the purposes and policy of this act. Such recommendations shall include a plan for the integrated control and utilization of the waters of the Columbia Valley region, which will reconcile and harmonize, as far as may be practicable within the policy prescribed in section 2 (c) (1) of this act, the requirements for flood control, navigation, reclamation, power, and other needs, and which will promote soil conservation, afforestation and reforestation, mineral development, preservation of fishing and game resources, and recreation and recreational facilities, in such a way as to secure the maximum public benefit for the region and Nation. Particular consideration in such a plan and recommendations shall be given to projects and activities which shall serve the following purposes:

(1) The control and prevention of floods which impair and disrupt navigation, the facilities of interstate commerce, the properties and functions of the United States, and agricultural and industrial properties and production, by, among other means, the storage, control, and disposition of flood and surplus waters, and the control and retardation of water run-off and the restoration and improvement of the absorption and infiltration capacity of the soil. Projects for such purposes shall include, but not by way of limitation, dams, reservoirs, levees, spillways, and floodways; improved methods and conditions of soil conservation, utilization, fertilization, and cultivation; and the conservation of forests and afforestation and reforestation of lands.

(2) The promotion of navigation by, among other means, the improvement of the channels of navigable rivers and their tributaries; the prevention of siltation of such waters; the regulation of stream flow; and the development and coordination of navigation facilities.

(3) The reclamation of arid, semiarid, swampy, wet, logged off, and cut-over lands by, among other means, the irrigation, drainage, or clearing of lands, and the advancement of their economic use through improved water-utilization and soil-conservation procedures.

(4) The safeguarding of navigable waters and their use by, among other means, the prevention and abatement of pollution of navigable streams and their tributaries, the provision of sewage-disposal and water-purification works and structures and facilities in connection therewith, and the adoption of other appropriate sanitation practices.

(5) So far as may be consistent with or necessary or appropriate for the control and prevention of floods, the promotion of navigation, the safeguarding of navigable waters, and the reclamation of lands, as provided in subsection (a), plans shall give due regard to the following, among other considerations: (I) The present and future development and conservation of water for power, irrigation, and other beneficial uses; (II) the prudent husbandry of soil, mineral, and forest resources and their conservation for recreation, the protection of wild game and fish, and other beneficial uses; (III) the preventing of irreparable waste of the Nation's resources from droughts, winds, dust storms, and soil erosion; (IV) the integration and interconnection of projects and activities, the development of their multiple purposes, and the equitable distribution of the benefits thereof; and (V) equitable contributions to cost by States and subdivisions and agencies thereof specially benefited by the projects and activities.

(b) The Corporation is further authorized, after following the procedure prescribed in subsection (a) hereof, to formulate and report to the President and Congress, at such time or times as it deems advisable, its further recommendations for the unified development of the Columbia Valley region in accordance with the purposes and policy of this act. Such recommendations may include additions to or modifications of the plan provided in subsection (a) hereof.

(c) The plans and recommendations authorized in subsections (a) and (b) hereof shall be in sufficient detail to provide the President, the Congress, and the people and institutions of the region with reasonably specific information as to—

(1) the water control and utilization policy and program which would be established and maintained;

(2) the nature, scope, and general location of the projects and activities recommended, and the estimated cost and benefits thereof;

(3) the order of preference and priority which should be followed in the construction and carrying out of such projects and activities in the light of postwar conditions existing and anticipated at the time of the report.

(d) The plans and recommendations authorized in subsections (a) and (b) hereof shall be forwarded to the President and to Congress while it is in session. The plans and recommendations shall lie before the Congress for its consideration for a period of not to exceed 120 calendar days during which Congress is in session. An adjournment of more than 3 days to a day certain by either House or an adjournment of the Congress sine die shall interrupt the 120-day period, but in either case the remainder of the period shall begin to run on the first day on which both Houses are again in session: *Provided*, That if a resolution with respect to such plans and recommendations has been passed by one House and sent to the other, no interruption shall occur by reason of adjournment of the first House taken thereafter. If not affirmatively disapproved by the Congress by concurrent resolution within the 120-day period, each of said plans and recommendations shall be deemed to be effective at the end of such period, and the provisions thereof shall be carried out in accordance with their terms subject to the provisions of this act.

TRANSFER OF PROJECTS, PROPERTY, AND FUNCTIONS TO CORPORATION

SEC. 9. (a) On the first day of the third calendar month following the effective date of this act, or on the first day of the calendar month following the appointment and confirmation of the directors of the Corporation, whichever is later—

(1) the exclusive use, possession, and control of the Bonneville project, including the Bonneville Dam, the Columbia Basin project, including the Grand Coulee Dam, the Hungry Horse project, including the Hungry Horse Dam, the Umatilla project, including the McNary Dam, the Snake River project, including the dams contemplated by the plans submitted in House Document No. 704, Seventy-fifth Congress, as modified pursuant to the act of March 2, 1945 (Public Law 14, 79th Cong.), and the Bonneville transmission system, together with all real estate, buildings, powerhouses, hydroelectric and operating appurtenances (including the locks), books, records, and correspondence connected therewith, all tools and machinery, equipment, accessories, and materials belonging thereto, and all laboratories and plans used as auxiliaries thereto, shall be entrusted to the Corporation for the purposes of this act: *Provided*, That the Corporation may operate each such project or portion thereof through the agency from which it is hereby transferred, including the Bureau of Reclamation and the Corps of Engineers. At the same time the employees of the Bonneville Power Administration shall be transferred to the Corporation, and any employees of the Bureau of Reclamation and the Corps of Engineers who are employed in connection with the foregoing projects and property may be transferred to the Corporation at its option;

(2) the unexpended balances of the appropriations of the Department of the Interior and the Department of War for the construction, operation, and maintenance of said projects and transmission system shall be

transferred to the Corporation and shall be placed in a single account with, and shall be available for expenditure in carrying out the purposes of this act in the same manner and to the same extent as, all other funds of the Corporation;

(3) the Corporation shall complete and administer the Columbia Basin, Hungry Horse, and McNary projects, and the Snake River projects authorized by the act of March 2, 1945 (Public Law 14, 79th Cong.), in accordance with the purposes and policies of this act: *Provided*, That the Corporation in completing and administering the irrigation and reclamation features of the Columbia Basin project shall be governed by the Columbia Basin Project Act (57 Stat. 14), except to the extent that it is inconsistent with this act, and all the powers and functions of the Secretary of the Interior as provided in said Columbia Basin Project Act shall be transferred to and may be exercised by the Corporation: *Provided further*, That the Corporation and the Bureau of Reclamation are hereby directed to work out such arrangements and schedules as are necessary to insure the prompt completion of the Columbia Basin project and to insure that construction will proceed as soon as materials and manpower become available.

(b) The President is authorized, whenever in his judgment the purposes of this act and the interests of economy and efficiency will be served thereby, to transfer to the Corporation the use, possession, control, and operation of any dam or water-control project, together with appurtenant works and transmission facilities, constructed, or under construction, or hereafter constructed by or in behalf of the United States or its instrumentalities in the Columbia Valley region, and of such other real or personal property of the United States, or any agency thereof, and any functions, duties, powers, and responsibilities conferred by law upon any executive department or agency of the United States which pertain to projects or activities within or affecting the region and which are within the scope of or related to any functions, duties, powers, or responsibilities conferred upon the Corporation by this act, as he may from time to time deem necessary or proper to carry out the purposes and policy of this act. All contractual obligations of the transferring department or agency pertaining to the use of such dams, projects, works, facilities, and other properties or to the disposition of the products thereof, including water for irrigation, shall be assumed by the Corporation. In connection with any such transfer the President shall make such provision as he deems necessary or appropriate for the transfer to the Corporation of unexpended balances of appropriations available for use in respect of such dams, projects, works, facilities, other properties, and such functions, duties, powers, or responsibilities, together with personnel, equipment, books, records, correspondence, and any powers, duties, and other obligations pertaining thereto. All such unexpended balances shall be placed in a single account and shall be available for expenditure in carrying out the purposes of this act in the same manner and to the same extent as all other funds of the Corporation.

GENERAL POWERS AND DUTIES OF CORPORATION

SEC. 10. (a) The Corporation is hereby authorized and directed to construct, operate, and carry out such projects and activities in the Columbia Valley region as will best serve to control and prevent floods, to safeguard the navigable waters, and to promote navigation and the reclamation of the lands. In order to effectuate such primary purposes with the greatest public benefit, to create employment, and, so far as is consistent with such primary purposes and the policy prescribed in section 2 (c) (1) of this act, to avoid the waste of water, water power, and other property of the United States, the Corporation shall have such powers as may be necessary or appropriate to construct by contract, force account or otherwise, operate, and carry out such projects or activities so as to accomplish the purposes of this act, including but without limitation, the power—

(1) to acquire, construct, operate, maintain, and improve dams, locks, reservoirs, levees, spillways, floodways, fishways, conduits, canals, roads, roadways, docks, wharves, terminals, sewage-disposal, water-purification, and other sanitation works, and recreation facilities, and structures, equipment, and facilities incidental thereto;

(2) to acquire, construct, operate, maintain, and improve such canals, conduits, powerhouses, steam-generating plants, transmission lines, rural electric lines and substations, and such machinery, equipment, structures, and facilities, for the storage and transportation of water or for the generation and transmission of electric energy as the Corporation deems necessary or appropriate to supply existing and potential markets;

(3) to develop and provide such methods and conditions of water and land utilization as the Corporation deems necessary or appropriate to prevent and abate floods and droughts.

In order to further effectuate such primary purposes in the construction and operation of dams for projects entrusted to it, the Corporation, insofar as practicable, shall make provision, in the construction of any dam, for such foundations, sluices, penstocks, and other works as may be necessary or appropriate to prevent the waste of water power at such dam and to make possible the economical future development of water power at such dam.

(b) The Corporation is authorized to negotiate, execute, and carry out contracts with States, counties, municipalities, and all State agencies and with railroads, railroad corporations, common carriers, and all public-utility commissions and any other person, firm, or corporation, for the relocation of railroad tracks, highways, highway bridges, mills, ferries, electric-light plants, and any and all other properties, enterprises, and projects, the protection, alteration, reconstruction, relocation, replacement, or removal of which may be necessary in order to carry out the provisions of this act. The Corporation is further authorized to exercise the power of eminent domain to carry out the purposes of this subsection.

(c) The Corporation is authorized to advise and cooperate in the readjustment of the population displaced by the construction of dams, the protection of watersheds, the acquisition of land, and other necessary operations, in order to effectuate the purposes of this act; and may cooperate with Federal, State, and local agencies to that end.

(d) The Corporation is authorized, if in its judgment the interest of economy and efficiency will be served thereby, to construct or operate any project or conduct any activity entrusted to it through, or in cooperation with other departments and agencies of the United States and through or in cooperation with States, counties, municipalities, cooperatives, individuals, educational and scientific institutions, or other bodies, agencies, and organizations, public or private. The departments and agencies of the United States are hereby authorized to participate in the construction or operation of such projects or the conduct of such activities on terms mutually agreeable to such department or agency and the Corporation.

DISPOSITION OF SURPLUS ELECTRIC ENERGY

SEC. 11. (a) The Corporation is hereby authorized to sell and dispose of surplus electric energy generated by it, not used in its operations or for operation of locks and other works or in the case of reclamation projects for reclamation of public lands, to Federal agencies, States, counties, districts, municipalities, corporations, cooperatives, partnerships, and individuals, according to the policies hereinafter set forth; to provide for emergencies, break-down relief, increased stability and economy in operations, and conservation of stored water, the Corporation may enter into contracts or arrangements upon suitable terms with public and private power systems for the purchase or mutual exchange of electric energy, or both, and for reciprocal use of transmission facilities.

(b) To encourage the widest possible use of available electric energy, to provide adequate markets and outlets therefor, and to prevent the monopolization thereof by limited groups of localities, the Corporation shall acquire, construct, operate, maintain, and improve such electric-transmission lines, rural-electric lines, substations, and other structures and facilities as it deems necessary or appropriate to bring electric energy available for sale, from its projects to existing and potential markets, and to interconnect such projects with other public or private projects for the disposition, purchase, or exchange of electric energy.

(c) To insure the disposition of the electric energy developed at a project for the benefit of the general public, and particularly of domestic and rural consumers, the Corporation shall, in disposing of electric energy after meeting the needs of Federal agencies, give preference and priority to States, counties, and municipalities, including agencies, instrumentalities, or political or governmental subdivisions thereof or of two or more States (in this act called public agencies), and to cooperative and other organizations organized or administered not for profit but primarily for the purpose of supplying electric energy to their members as nearly as possible at cost (in this act called cooperative agencies). In the event of competing applications by public or cooperative agencies (whether or not formally organized) on the one hand, and other persons or agencies on the other hand, the Corporation, in order to preserve and protect the preferential rights and priorities of such public and cooperative agencies, shall allow to people and communities, when within such distance from such project as to render practicable the transmission of power therefrom, reasonable opportunity and time to acquire, purchase, or construct the necessary facilities for the use or distribution of such electric energy, including reasonable opportunity and time to create and finance such public or cooperative agencies under the laws of the several States.

(d) Subject to the provisions of this act, the Corporation may enter into contracts for the sale or disposition at wholesale of electric energy, whether for resale or direct consumption, to Federal agencies, to public and cooperative agencies, and to private agencies and persons. Contracts entered into under this subsection shall be binding in accordance with the terms thereof and shall be effective for such period or periods, including renewals or extensions, as may be provided therein, not exceeding in the aggregate 20 years from the respective dates of the making of such contracts. Such contracts shall contain appropriate provisions, to be agreed upon between the Corporation and the purchaser, for the equitable adjustment of rates at appropriate intervals. In the case of contracts with private agencies or persons who resell the bulk of the electric energy purchased, the contracts shall contain appropriate provisions authorizing the Corporation to cancel the contract, in whole or in part, upon 3 years' notice in writing whenever in its judgment there is reasonable likelihood that part of the electric energy purchased under such contract will be needed to

satisfy the preferential rights and priorities of public or cooperative agencies under this act.

(e) Contracts for the sale of electric energy shall contain such terms and conditions, including provisions to insure that resale to the ultimate consumer shall be at rates which are reasonable and nondiscriminatory, as the Corporation may deem necessary or desirable for carrying out the purposes of this act, and in case the purchaser shall fail to comply with any such terms and conditions, said contract may provide that it may be canceled at the election of the Corporation.

(f) Schedules of rates at which electric energy will be contracted for sale shall be published by the Corporation and may be changed, withdrawn, or added to from time to time. All contracts for the sale or disposition of electric energy other than for exchanges, shall provide for payment pursuant to a schedule or schedules so published. Subject to the provisions of section 14, the Corporation shall publish such rate schedules as it finds necessary or appropriate to provide adequate markets and outlets for electric energy and to encourage the widest possible use of electric energy: *Provided*, That its rate schedules collectively shall have regard (upon the basis of the application of such rate schedules to the capacity of the contemplated electric facilities of the Corporation) to the recovery of the costs of generating and transmitting such electric energy, including appropriate reserves for maintenance and upkeep and the higher of the following:

(1) amortization over a reasonable period of years of the capital investment allocated to commercial power, plus interest on the unamortized portion of such investment at an annual rate not less than the annual cost of money to the Treasury Department on Treasury bonds having a maturity date of 10 years or more issued during the period in which the unamortized investment was incurred; or

(2) amortization over a reasonable period of years of the capital investment allocated to commercial power plus the capital investment allocated to purposes other than commercial power but assigned to be repaid out of power revenues.

In order to distribute the benefits of integrated transmission systems and to promote the equitable distribution of electric energy, rate schedules shall provide for uniform rates, or rates uniform throughout prescribed transmission areas.

RECLAMATION PROVISIONS

SEC. 12. (a) For the purpose of stabilizing the agricultural economy of the region, making more secure the tenure of settlers on the land, and providing family-type farming operations on farms consisting wholly or partly of reclaimed lands, the Corporation may undertake projects for the reclamation of lands, including logged or cut-over lands, by irrigation, drainage, or land clearing in the region. Such projects shall be constructed, operated, and maintained by the Corporation, and reimbursement therefor shall be made by the water users or other beneficiaries in accordance with the provisions of the Federal reclamation laws (act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof or supplementary thereto), so far as such provisions are consistent with this act and are otherwise applicable: *Provided*, That where a reclamation project has been included in a plan submitted to the Congress under section 8 of this act, no further report thereon, nor findings of feasibility with respect thereto, shall be required for the authorization of the project under the Federal reclamation laws.

(b) The Corporation shall establish the maximum size of farm units within each project for the reclamation of lands in accordance with its findings as to the area sufficient in size to constitute a productive, owner-operated farm or adequately to supplement adjacent grazing or dry farming lands. No benefits from any such project shall be made available to the owners of lands whose individual holdings exceed the maximum area so prescribed by the Corporation until and unless such owners shall have agreed for and in behalf of themselves, their heirs, executors, and assigns, by contracts in form, substance, and legal sufficiency satisfactory to the Corporation—

(1) that they will sell such part of their lands as may exceed the maximum area so prescribed by the Corporation at the appraised value thereof, as determined by the Corporation, without reference to or increment on account of the construction of the project; and

(2) that the Corporation shall have an irrevocable power of attorney to sell in their behalf any such excess lands, not theretofore disposed of by said landowners, at the appraised value thereof: *Provided*, That any sales by the Corporation pursuant to such power of attorney shall, unless otherwise provided in writing by the landowner, be only for cash and only upon terms that will require the landowner to surrender possession of all of his excess lands at substantially the same time: *Provided further*, That the provisions of this section shall not be applicable to the Columbia Basin project to the extent that they are inconsistent with the Columbia Basin Project Act.

LAND SETTLEMENT; VETERANS' PREFERENCE

SEC. 13. (a) For a period of 20 years following the effective date of this act, veterans shall have a 90-day preferred right of purchase with respect to lands made available for settlement by the Corporation on projects constructed, operated, or maintained by it. The Corporation shall advise the Veterans' Administration of the availability of lands for settlement; and the Administrator of Veterans' Affairs shall inform veterans of settlement opportunities on such lands. As used in this section the term veteran means any person who served in the active military or naval service during a time of war and who shall have been discharged or released therefrom under conditions other than dishonorable.

(b) The Corporation may acquire, but not by condemnation, such lands in the region as it deems necessary or proper for disposition to veterans and others desiring to settle thereon. Such lands shall be disposed of to such settlers in economic family-sized farming units determined in accordance with the provisions of subsection (b) of section 12 of this act.

(c) To expedite the settlement and use of lands transferred to the Corporation or acquired under this section, the Corporation may improve such lands and may erect and provide thereon such structures and facilities as may be necessary or desirable for the use thereof.

(d) Contracts for the sale of land under this section shall be on the basis that, in the judgment of the Board, will provide the return in a reasonable period of years of the appraised value of the land and the improvements thereon, including structures and facilities, as determined by the Corporation, consideration being given in such appraisal to the normal earning capacity of the property. Such sales of land as may be made by the Corporation for prices insufficient to recover total investments therein shall be listed by the Corporation in its annual report to the Congress.

ALLOCATION OF COSTS

SEC. 14. (a) The Corporation shall make a thorough investigation of the costs to the United States of each dam, steam plant, electric or water transmission system, or other similar facilities constructed or acquired by or turned over to the Corporation for its management and control for the purpose of allocating on a region-wide basis the unamortized portion of such costs among the various purposes served by the facilities—such as navigation, flood control, irrigation, commercial power, or other types of development, as the case may be. Costs of facilities serving only one purpose shall be allocated to that purpose. Costs of facilities serving more than one purpose shall be equitably allocated among such purposes in such manner as the Corporation deems proper.

(b) Costs allocated to purposes which do not directly produce revenues, such as flood control and navigation, shall not be reimbursable. All other costs shall be reimbursable and shall be assigned for reimbursement among revenue-producing purposes, upon a region-wide basis, in such manner as the Corporation deems necessary or appropriate to promote a sound national economy, to encourage the widest possible economic use of water for irrigation and municipal purposes and of electric energy for domestic, rural, and industrial needs, and to avoid the imposition upon any one purpose of a greater share of joint costs than such purpose can and should fairly bear. The Corporation shall also determine the appropriate periods and rates of amortization to be applied to the capital investment to be repaid by revenue-producing purposes. The allocation of costs, the assignment of reimbursement obligations, and the periods and rates of amortization so determined by the Corporation, when approved by the President, shall be final and shall be used thereafter in keeping the books of the Corporation.

(c) The Corporation shall, within 5 years from the date of enactment of this act, file with Congress a statement of its allocation of the costs and assignment of reimbursement obligations of all such properties constructed, acquired, or turned over to said Corporation and which have been completed prior thereto. The Corporation shall also file a statement of its allocation of the costs and assignment of reimbursement obligations of such other properties as have been constructed, acquired, or turned over to the Corporation and have been completed during any fiscal year in its annual report to Congress for the succeeding fiscal year.

(d) For the purpose of accumulating data useful to the Congress in the formulation of legislative policy in matters relating to the generation, transmission, and distribution of electric energy, and to the Federal Power Commission and other Federal and State agencies, and to the public, the Corporation shall keep complete accounts of its costs of generation, transmission, and distribution of electric energy and shall keep a complete account of the total cost of generation and transmission facilities constructed or otherwise acquired by the Corporation, and a description of the major components of such costs according to such uniform system of accounting for public utilities as may be prescribed by the Federal Power Commission, with such modifications as may be deemed by the Corporation and Federal Power Commission to be necessary or desirable by reason of the nature and character of the Corporation and its operations, together with records of such other physical data and operating statistics of the Corporation as may be helpful in determining the actual cost and value of services, and the practices, methods, facilities, equipment, appliances, and standards, and sizes, types, location, and geographical and economic integration of plants and systems best suited to promote the public interest, efficiency, and the wider and more economical use of electric energy. Such data shall be reported to the Congress by the Corporation from time to time with appro-

priate analyses and recommendations, and, so far as practicable, shall be made available to the Federal Power Commission and other Federal and State agencies which may be concerned with the administration of legislation relating to the generation, transmission, or distribution of electric energy.

(e) The Corporation may treat any two or more projects or any portions thereof, existing or planned, including transmission facilities, as a single unit, and it may credit the revenues derived from its integrated operations to the individual projects or portions thereof in such manner as it deems appropriate.

FACILITATING DISPOSITION OF SURPLUS POWER

SEC. 15. In order to facilitate the disposition of the surplus power of the Corporation according to the policies set forth in this act, to give effect to the priority herein accorded to public and cooperative agencies in the purchase of such power by enabling them to acquire facilities for the distribution of such power, and at the same time to preserve existing distribution facilities as going concerns and avoid duplication of such facilities wherever possible, the Corporaton is authorized—

(a) to assist and render services for any existing or potential purchaser of electric energy in constructing, acquiring, improving, maintaining, and operating the electrical distribution lines and other facilities of such purchaser or potential purchaser;

(b) to advise and cooperate with public and cooperative agencies and local groups desiring to form such public and cooperative agencies, situated within transmission distance from any dam where such power is generated by the Corporation;

(c) to extend credit to, and to assist and render services for, such agencies and groups in constructing, acquiring, improving, maintaining, financing, and operating (1) distribution facilities and incidental works, including generating plants; and (2) interconnecting transmission lines, or in acquiring any interest in such facilities, incidental works, and lines;

(d) to acquire, operate, maintain, extend, and improve electric utility systems, the principal facilities or operations of which are in the Columbia Valley region, or parts of such systems and properties and assets reasonably incidental thereto, or the acquisition thereof, and other generating, transmission, or distribution facilities, the acquisition of which will improve the operation of the Corporation's electric facilities in the region or facilitate the development of appropriate marketing outlets for the electric energy produced at any project under the Corporation's control: *Provided*, That before the Corporation consummates the acquisition of a utility system or part thereof, the Corporation shall file with the Director of the Division of the Federal Register, the National Archives, to be published in the Federal Register, a certification that public or cooperative agencies, or both, in a substantial portion of the area served by such system or part thereof, have expressed their desire, through existing State laws, to purchase the distribution facilities included in such system or part thereof which are located in the area served by such agencies, that in its judgment the operation of such system or part thereof will increase the Corporation's power revenues in an amount estimated to be sufficient to pay the operation and maintenance costs thereof and the principal and interest charges on the investment therein, and that the value of the acquired system or part thereof will be sufficient upon any sale or disposition pursuant to subsection (e) of this section substantially to repay the investment therein;

(e) to sell or otherwise dispose of and to convey any distribution facilities acquired pursuant to subsection (d) of this section, and any improvements thereof to public or cooperative agencies, and it is directed to do so as speedily as such sales or other disposition can reasonably be consummated, and it may sell or otherwise dispose of and convey to public or cooperative agencies such generating facilities and transmission lines acquired pursuant to the said subsection and any improvements thereof as it determines can be more conveniently and economically operated by such public or cooperative agencies. The Corporation may also sell or otherwise dispose of and convey any incidental properties or assets acquired by it when acquiring, improving, or operating a utility system pursuant to the said subsection. All such sales or other dispositions shall be upon terms which in the judgment of the Corporation are reasonable and advantageous to the Government. In managing such facilities and properties during the temporary ownership thereof by the Corporation, and in temporarily selling electricity at retail, the Corporation, notwithstanding any other provision of law, may adopt and follow such business practices, including bookkeeping, accounting, service, sales, and other practices as in its opinion are reasonable and are common and accepted in the utility business: *Provided*, That it shall keep the accounts of its electric operations and sales in conformity with the requirements of the Federal Power Act and the regulations issued pursuant thereto by the Federal Power Commission. In order to effect the continuity of operation and service during its interim operation thereof, the Corporation may employ and fix the compensation of the persons who were employed in operating the said facilities and property and in selling electricity at retail through the distribution facilities immediately prior to the Corporation's acquisition thereof, and such other persons who may be necessary, without regard to any of the laws applicable to the employment or payment of employees of the United States. The Corporation may also enter into leases or management contracts of not to exceed 1 year's duration, providing for the temporary operation, maintenance, extension, and improvement of the said facilities and properties for the sale of electricity at retail through the distribution facilities; and it may extend the said leases or management contracts for successive terms of not more than 6 months each.

FACILITATING DISPOSITION OF SURPLUS WATER

SEC. 16. In order to facilitate the disposition of the surplus water of the Corporation according to the policies set forth in this act, the Corporation is authorized—

(a) to assist and render services for any existing or potential purchaser of water in constructing, acquiring, improving, maintaining, and operating the water, transmission, and distribution facilities of such purchaser or potential purchaser;

(b) to advise and cooperate with States, districts, counties, municipalities, cooperatives, and nonprofit organizations, and local groups desiring to form such districts, municipalities, cooperatives, and nonprofit organizations within distance permitting practicable purchase and utilization of water stored and available for sale at any work or facility of the Corporation;

(c) to extend credit to, and to assist and render services for such agencies and organizations in constructing, acquiring, improving, maintaining, financing, and operating canals, conduits, laterals, pipe lines, ditches, siphons, and incidental works and facilites, or in acquiring any interest therein.

INDIAN LANDS

SEC. 17. The Corporation may exercise any of its powers under this act, including the power of eminent domain, on Indian lands, irrespective of the manner in which title to such lands is held. In the event of the Corporation acquires any Indian lands or receives by transfer any lands of the United States utilized for Indian purposes, the Corporation shall make available to the Office of Indian Affairs such sums as the Corporation, with the approval of the Secretary of the Interior, determines to be requisite for rehabilitating and relocating the Indians displaced by such acquisition or transfer, and for replacing facilities, the usefulness of which to the Indians has been destroyed or impaired through the operations of the Corporation, where the moneys paid for the lands would otherwise be inadequate to accomplish such purposes. The said sums, together with moneys paid by the Corporation for Indian lands acquired by it, other than lands individually owned without restrictions upon alienation, payments for which shall be made directly to the owner, shall be available, without further appropriation, for expenditure by the Office of Indian Affairs in rehabilitating and relocating the Indians so displaced, in replacing the facilities no longer useful to them, in acquiring for their benefit, by purchase or otherwise, lieu lands to replace the lands acquired by the Corporation, and for such other purposes as are authorized by law. Lieu lands so acquired shall be held in the same status as those from which the funds were derived and shall be nontaxable until otherwise provided by the Congress.

REGIONAL DEVELOPMENT ACTIVITIES

SEC. 18. The Corporation, in order to encourage the preservation, discovery, and increase of natural resources, to promote proper resource development, to prevent soil erosion and floods, to encourage industry, and to stimulate the more efficacious use of the land, waters, and products thereof in the region, is hereby authorized with respect to—

(a) Research and scientific experimentation—

(1) to plan and to conduct economic, scientific, and technologic investigations, surveys, and studies, to establish, maintain, and operate laboratories, research facilities and pilot plants, and to undertake experiments and demonstrations, all for the purpose of developing new uses and new and improved techniques and methods for the discovery, extraction, production, processing, and use of the resources and products of the region, and of fostering the orderly and proper physical, economic, and social development thereof; and

(2) to sell any products purchased or otherwise acquired by the Corporation, or the products manufactured by the Corporation in the development of any process, as a part of its development program, and to make donations or other dispositions of any such products for experimentation, education, and introduction of the use of such products so as to obtain information as to their value.

(b) Fertilizers and chemicals—

(1) to acquire and make alterations, modifications, and improvements in existing plants and facilties, to construct new plants and facilities, and to operate and maintain such plants and facilities for the purpose of enabling the corporation to furnish chemical products for military purposes, and fertilizer components and products for agricultural purposes; and in connection therewith, the Corporation may utilize, with or without reimbursement, the mineral resources of the public lands in the region which are suitable for the purposes herein set forth;

(2) to contract with commercial producers for the production of such fertilizer materials as may be needed in the Corporation's program of development and introduction. Such contracts may provide either for outright purchase of materials by the Corporation or only for the payment of carrying

charges on special materials manufactured at the Corporation's request for its program;

(3) to arrange with farmers, farm organizations, and other bodies for large-scale practical use of fertilizers under conditions permitting an accurate measure of the economic return they produce.

(c) Agriculture, forestry, grazing, and soil conservation—

(1) to promote the use of and for the purposes for which it may best be suited, including but not limited to agricultural, forestry, and grazing purposes; to foster the most efficient agricultural, forestry, grazing, and soil-conservation practices; to assist in afforesting, reforesting, seeding, and reseeding lands best suited for forest or grazing purposes; and to promote soil conservation by the use of crops, grasses, trees, and other plants or by any other means;

(2) to arrange for the large-scale practical use of new or improved varieties of crops, grasses, trees, and other plants, and new or improved methods for growing, harvesting, processing, and marketing them during the initial or experimental period, under conditions permitting an accurate measure of the economic return they produce; and

(3) to sell any crops, grasses, trees, or other plants grown, or fertilizers purchased or otherwise acquired by the Corporation or the products manufactured by it, as a part of its program of development of soil conservation, or to make donations or other dispositions to be fairly and equitably distributed through the agency of experimental stations, county demonstration agents, agricultural schools or colleges, farmers' cooperatives, or associations of owners, users, or operators of lands or of processors of products therefrom, or otherwise, as the Corporation may determine, for experimentation, education, and introduction of the use of such items and products.

(d) Fish and wildlife—

(1) to provide for the conservation, management, and rehabilitation of all species of birds, fish, mammals, and other classes of wild animals through the development, protection, rearing, stocking, and management of such wildlife, the resources thereof and their habitat, the control of losses of the same from diseases or other causes and through minimizing damages from predators and overabundant species, but not in conflict with the provisions of the laws relating to the protection of migratory birds or the programs administered under such laws, which shall continue to be administered as presently provided by law;

(2) to provide in connection with impoundments, diversions, water-control facilities, and any other works suitable and necessary means, measures, and management areas to conserve, manage, rehabilitate, and prevent loss of and damage to birds, fish, mammals, and other classes of wild animals dependent upon the waters, lands, and habitat affected by such works; and

(3) to cooperate with, and give and sell fish, game, and other wildlife to, States, counties, districts, municipalities, and governmental subdivisions and agencies of any of them, and educational and scientific institutions.

(e) Recreation—

(1) to construct, establish, maintain, develop, and operate, in conjunction with any of the programs and activities authorized under this act, recreational areas and facilities, and to make such areas and facilities available for public use upon such terms and conditions as the Corporation may determine to be appropriate; and

(2) to assist cooperating organizations in developing and executing recreational and health programs.

PERSONNEL

SEC. 19. (a) The Corporation shall, without regard to any other laws, rules, or regulations relating to the employment or payment of employees of the United States except the Veterans' Preference Act of 1944 to the extent that it otherwise is applicable, employ and fix the compensation of such managers, assistant managers, officers, employees, attorneys, agents, and consultants as are necessary for the transaction of its business, define their duties, require bonds of such of them as the Board may designate, the premiums for which shall be paid by the Corporation, and provide a system of organization to fix responsibility and promote efficiency. Any employee of the Corporation may be removed in the discretion of the Board. No regular officer or employee of the Corporation shall receive a salary in excess of that received by the directors. Subject to the provisions of this act, the Corporation is authorized to deal collectively with its employees through representatives of their own choosing and is authorized to enter into written or oral contracts with such employee representatives.

(b) Employees of the Corporation shall have rights with respect to security of tenure comparable to those provided by the civil-service laws, and shall be protected to substantially the same extent as persons subject to such laws. Employees acquired by transfer from other establishments or agencies of the United States shall retain all pay, leave, and retirement credits which they held at the time of such transfer, and in case they subsequently are retransferred to positions under the civil-service laws, shall be credited for the purpose of seniority with the time spent as an employee of the Corporation.

(c) In the employment, selection, classification, and promotion of officers and employees of the Corporation, no political test or qualification shall be permitted or given consideration, but all such employments and promotions shall be given and made on the basis of merit and efficiency. It shall be unlawful for the Board to make or assist in the making of or cause to be made any employment, selection, classification, or promotion of any officer or employee of the Corporation on the basis of or because of any political qualification or test, and if any director violates this provision he shall be guilty of an offense against the United States, and upon conviction thereof shall be fined not more than $5,000 or imprisoned not more than 1 year or both. Any officer or employee of the Corporation who is found to be guilty of a violation of this subsection shall be removed from office by the Board.

(d) The benefits of the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes", approved September 7, 1916, as amended, shall extend to persons given employment under the provisions of this act; and the remedies afforded by such act of September 7, 1916, as amended, shall be exclusive and in lieu of any other remedy for injuries or death against the United States or the Corporation.

(e) All persons given employment under this act, other than (1) laborers, mechanics, and workmen employed in connection with construction work or the operation and maintenance of the Corporation's properties and facilities to whom the act of May 29, 1930 (46 Stat. 468), as amended, does not otherwise apply, and (2) employees retained or hired in connection with interim operations under section 15 of this act, shall be deemed to be "employees" within the meaning of that term in the said act of May 29, 1930 (46 Stat. 468), as amended.

(f) Section 1426 of the Internal Revenue Code, as amended, is amended by adding at the end thereof the following new subsection:

"(k) Certain employees of Columbia Valley Authority: The term 'employment' shall include such service as is determined by the Columbia Valley Authority (hereinafter called the Authority) to be performed after December 31, 1946, by (1) a laborer, mechanic, or workman, in connection with construction work or the operation and maintenance of the Authority's properties and facilities, or (2) an employee retained or hired in connection with interim operations under section 15 of the Columbia Valley Authority Act, as an employee performing service for the Authority, but shall not include any service performed by such a laborer, mechanic, or workman to whom the act of May 29, 1930 (46 Stat. 468), as amended, applies. The term 'wages' means, with respect to service which constitutes employment by reason of this subsection, such amount of remuneration as is determined (subject to the provisions of this section) by the Authority to be paid for such service. The Authority is authorized and directed to comply with provisions of the internal revenue laws as the employer of individuals whose service constitutes employment by reason of this subsection."

(g) Section 209 of the Social Security Act, as amended, is amended by adding at the end thereof the following new subsection:

"(q) (1) The term 'employment' shall include such service as is determined by the Columbia Valley Authority (hereinafter called the Authority) to be performed after December 31, 1946, by (1) a laborer, a mechanic, or workman, in connection with construction work or the operation and maintenance of the Authority's properties and facilities, or (2) an employee retained or hired in connection with interim operations under section 15 of the Columbia Valley Authority Act, as an employee performing service for the Authority, but shall not include any service performed by such a laborer, mechanic, or workman, to whom the act of May 29, 1930 (46 Stat. 468), as amended, applies.

"(2) The Social Security Board shall not make determinations as to whether an individual has performed services which are employment by reason of this subsection, the periods of such services, the amounts of remuneration for such services which constitute 'wages' under the provision of this section, or the periods in which or for which such wages were paid, but shall accept the determinations with respect thereto of the Authority, and such agents as it may designate, as evidenced by returns filed by the Authority as an employer pursuant to section 1426 (k) of the Internal Revenue Code and certifications made pursuant to this subsection. Such determinations shall be final and conclusive.

"(3) The Authority is authorized and directed, upon written request of the Social Security Board, to make certification to it with respect to any matter determinable for the Board by the Authority under this subsection, which the Board finds necessary in administering this title."

(h) Section 1606 of the Internal Revenue Code, as amended, is amended by adding at the end thereof the following new subsection:

"(f) The legislature of any State may, with respect to service to be performed after December 31, 1946, by (1) a laborer, mechanic, or workman, in connection with construction work or the operation and maintenance of the Authority's properties and facilities, or (2) an employee retained or hired in connection with interim operations under section 15 of the Columbia Valley Authority Act, as an employee performing service for the Columbia Valley Authority (hereinafter called the Authority), require the Authority, and any such employee, to make contributions to an unemployment fund under a State unemployment compensation law approved by the Board under section 1603 and to comply otherwise with such law. Such

permission is subject to the conditions imposed by subsection (b) of this section upon permission to State legislatures to require contributions from instrumentalities of the United States. The Authority is authorized and directed to comply with the provisions of any applicable State unemployment compensation law as the employer of individuals whose service constitutes employment under such law by reason of this subsection."

(i) Section 1607 of the Internal Revenue Code, as amended, is amended by adding at the end thereof the following new subsection:

"(n) Certain employees of Columbia Valley Authority: The term 'employment' shall include such service as is determined by the Columbia Valley Authority (hereinafter called the Authority) to be performed after December 31, 1946, by (1) a laborer, mechanic, or workman, in connection with construction work or the operation and maintenance of the Authority's properties and facilities, or (2) an employee retained or hired in connection with interim operations under section 15 of the Columbia Valley Authority Act, as an employee performing service for the Authority. The term 'wages' means, with respect to service which constitutes employment by reason of this subsection, such amount of remuneration as is determined (subject to the provisions of this section) by the Authority to be paid for such service. The Authority is authorized and directed to comply with the provisions of the internal revenue laws as the employer of individuals whose service constitutes employment by reason of this subsection."

(j) All contracts to which the Corporation is a party and which require the employment of laborers and mechanics in the construction, alteration, maintenance, or repair of buildings, dams, locks, or other structures or facilities, shall contain a provision that not less than the prevailing rates of wages for work of a similar nature in the vicinity shall be paid to such laborers or mechanics. In the event any dispute arises as to what are the prevailing rates of wages, the question shall be referred to the Secretary of Labor for determination, and his decision shall be final. In the determination of such prevailing rate or rates, due regard shall be given to those rates which have been secured through collective agreement by representatives of employers and employees.

(k) The Corporation is authorized to request the assistance and advice of any officer, agent, or employee of any executive department, independent office, or agency of the United States, to enable the Corporation the better to carry out its powers successfully. The executive departments and independent offices and agencies of the United States are authorized to make such officers, agents, and employees available to the Corporation with or without reimbursement upon terms mutually agreeable to such department, independent office, or agency and the Corporation. The Corporation may accept and utilize such voluntary and uncompensated services as it finds helpful in carrying out the purposes of this act; and in connection with the utilization of such services reasonable payments may be allowed for necessary travel and other expenses. The Corporation, upon the basis of such authorization or approval as the Board may determine, may pay the expenses for travel of an employee and for transportation of his household effects, in connection with a change in his official station.

FINANCE, AUDITS, ACCOUNTS, AND REPORTS

SEC. 20. (a) The proceeds for each fiscal year derived by the Corporation from the sale of electric energy, the returns from water contracts, and the sale of any products manufactured by the Corporation and from any other activities of the Corporation, including the disposition of any real or personal property, shall be used for the following purposes and in the following order of priority:

(1) For payment of the expenses of the Corporation for operation and maintenance of dams and reservoirs and for conducting its business in generating, transmitting, and distributing electrical energy; for the establishment and maintenance of reserves for such purposes in amounts determined by the Corporation to be necessary and reasonable; and for a continuing emergency fund of $1,000,000 to defray emergency expenses and to insure continuous operation: *Provided*, That the funds covering such reserves shall be used only for the purposes for which they are maintained and shall not be impaired by any other payments authorized by this act.

(2) For payments in lieu of taxes pursuant to section 23 of this act.

(3) Subject to the provisions of section 21 of this act, for payments of interest and the principal of all outstanding revenue bonds of the Corporation as the same may become due and payable according to their terms, and for any sinking fund payments and the creation of any reserves required by the terms of the said bonds, or of any indenture agreement or instrument executed in connection therewith.

(4) For covering into the Treasury of the United States annually the appropriate payment on the reimbursement obligations established by the Corporation and approved by the President pursuant to section 14 of this act: *Provided*, That in any fiscal year in which the Corporation's revenues are not sufficient to cover into the Treasury the said sum in whole or in part, the unpaid amount shall be carried forward as a continuing obligation of the Corporation to pay and shall thereafter be paid to the Treasury in the same manner as the annual payments herein provided for.

(5) Subject to the provisions of section 21 of this act, for purchasing and retiring before maturity any of the Corporation's outstanding revenue bonds and for covering into the Treasury for the purpose of making advance payments on the reimbursement obligations established pursuant to section 14 of this act.

(6) All remaining revenues shall be paid into the Treasury of the United States at the end of each calendar year.

(b) The Corporation shall at all times maintain complete and accurate books of account. In January of each year the Board shall file with the President and the Congress a financial statement and a report as to the business of the Corporation covering the preceding governmental fiscal year.

(c) Subject to the provisions of this section, the Corporation shall determine and prescribe the manner in which its obligations and expenses shall be incurred, allowed, paid, and audited: *Provided*, That in addition to such audits by others as the Corporation may deem necessary or desirable, if any, the Comptroller General of the United States shall audit the transactions of the Corporation at such times as he shall determine, but not less frequently than once each governmental fiscal year, with personnel of his selection. In such connection he and his representatives shall have free and open access to all papers, books, records, files, accounts, plants, warehouses, offices, and all other things, property, and places belonging to or under the control of or used or employed by the Corporation, and shall be afforded full facilities for counting all cash and verifying transactions with and balances in depositaries. He shall make report of each such audit in quadruplicate, one copy for the President of the United States, one for the Chairman of the Board, one for public inspection at the principal office of the Corporation, and the other to be submitted by him to the Congress: *Provided*, That such report shall not be made until the Corporation shall have had reasonable opportunity to examine the exceptions and criticisms of the Comptroller General or the General Accounting Office, to point out errors therein, explain or answer the same, and to file a statement which shall be submitted by the Comptroller General with his report. The expenses for each such audit shall be paid from any appropriation or appropriations for the General Accounting Office, and such part of such expenses as may be allocated to the cost of generating, transmitting, and distributing electric energy shall be reimbursed promptly by the Corporation as billed by the Comptroller General. The Comptroller General shall make special report to the President of the United States and to the Congress of any transaction or condition found by him to be in conflict with the power or duties entrusted to the Corporation by law.

(d) Nothing in this act shall be construed to relieve the treasurer or other accountable officers or employees of the Corporation from compliance with the provision of existing law requiring the rendition of accounts for adjustment and settlement pursuant to section 236, Revised Statutes, as amended by section 305 of the Budget and Accounting Act, 1921 (42 Stat. 24), and accounts for all receipts and disbursements by or for the Corporation shall be rendered accordingly: *Provided*, That subject only to the provisions of this act, the Corporation is authorized to enter into such contracts, agreements, and arrangements, including the amendment, modification, adjustment, or cancellation thereof, and the compromise or final settlement of any claim arising thereunder, and of all litigation by or against the Corporation, and to make such expenditures, upon such terms and conditions and in such manner, as it may deem necessary and, notwithstanding the provisions of any other law governing the expenditure of public funds, the General Accounting Office, in the settlement of the accounts of the treasurer or other accountable officer or employee of the Corporation, shall not disallow credit for, nor withhold funds because of, any expenditure which the Board shall determine to have been necessary to carry out the provisions of said act.

(e) The Corporation shall determine its own system of administrative accounts and the forms and contents of its contracts and other business documents except as otherwise provided in this act.

(f) All funds required by the Corporation in addition to those derived and expended pursuant to subsection (a) hereof shall be provided by appropriation in accordance with the procedures of the Budget and Accounting Act of 1921 (42 Stat. 20), as amended, except as otherwise provided herein. All appropriations necessary to carry out the provisions of this act are hereby authorized.

REVENUE BONDS AND USE OF PROCEEDS

SEC. 21. The Corporation is authorized to issue and sell or exchange from time to time revenue bonds, revenue notes, and revenue obligations (all of which are hereinafter referred to as revenue bonds), and to use the proceeds thereof for the acquisitions authorized by section 15 (d) of this act, for providing funds for the rehabilitation of properties acquired pursuant thereto and working capital with which to commence operation thereof, but not more than 5 percent of the amount paid in any acquisition may be used for such purposes, and for purchasing, refunding, or redeeming outstanding revenue bonds. The interest and principal and other charges on such revenue bonds shall be paid only from the revenues from the Corporation's generation, transmission, and sale of electric energy pursuant to this act, and from the proceeds of the sales or other dispositions authorized by section 15 (e) of this act. The said revenue bonds shall express on their face that they are not direct obligations of the United States, and that the payment of the principal and interest on the bonds is not guaranteed

by the United States. Such revenue bonds shall be issued in such series and in such forms and denominations, shall mature within such period not more than 50 years from the date of their issue, may provide for redemption before maturity at the option of the Corporation or through the operation of any sinking fund in such manner and on such terms as may be stipulated therein, may carry such registration and conversion provisions, shall contain such provisions with respect to negotiability, may require the establishment of such sinking funds, shall bear such rates of interest, shall include such terms, conditions, and covenants not inconsistent with this act, shall be issued in such manner and amount, and shall be sold at such prices and in such manner as may be prescribed by the Corporation: *Provided*, That none of the properties or moneys of the Corporation or of the United States which are entrusted to the Corporation, other than power revenues and the proceeds of the sales or other dispositions authorized by section 15 (e) of this act, shall be pledged or mortgaged as security for any such revenue bonds or for any other purpose. The Corporation is authorized to execute such indentures, agreements, and other instruments as it may determine to be necessary to set forth the terms and conditions upon which revenue bonds are or may be issued under this act. Such revenue bonds shall be lawful investments, and may be accepted as security for all fiduciary, trust, and public funds, the investment or deposit of which shall be under the authority or control of the United States, or any officer or officers thereof. The Reconstruction Finance Corporation and the Secretary of the Treasury in their discretion are authorized to purchase any revenue bonds issued hereunder, and for such purpose the Secretary of the Treasury is authorized to use as a public-debt transaction the proceeds from the sale of any securities hereafter issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under said act, as amended, are extended to include any purchases of the Corporation's revenue bonds hereunder. The Reconstruction Finance Corporation and the Secretary of the Treasury may, at any time, sell any of the revenue bonds of the Corporation acquired by them under this section. All purchases and sales by the Secretary of the Treasury of the revenue bonds of the Corporation shall be treated as public-debt transactions of the United States. The Corporation shall have the power to purchase such revenue bonds in the open market at any time and at any price.

PROCUREMENT OF SUPPLIES AND SERVICES

SEC. 22. The Corporation may cause to be performed by contract any construction work authorized by this act. All purchases and contracts for supplies or services, except for personal services, made by the Corporation shall be made after advertising, in such manner and at such times sufficiently in advance of opening bids, as the Board shall determine to be adequate to insure notice and opportunity for competition: *Provided, however*, That advertisement shall not be required when (1) the Corporation determines that an emergency or insurance of continuous operation requires immediate delivery of the supplies or performance of the services; or (2) parts, accessories, supplemental equipment, extensions, additions, or services are required for supplies, facilities, or services previously furnished, constructed, or contracted for; or (3) the aggregate amount involved in any purchase of supplies or procurement of services does not exceed $500; in which cases such purchases of supplies or procurement of services may be made in the open market in the manner common among businessmen. In comparing bids and in making awards, the Board may consider such factors as relative quality and adaptability of supplies or services, the bidder's financial responsibility, plant, equipment and facilities, skill, experience, record of integrity in dealing, previous record of performance and compliance with specifications, and ability to furnish repairs and maintenance services, and the time of delivery or performance offered.

PAYMENTS IN LIEU OF TAXES

SEC. 23. (a) Subject to the provision of this section, the Corporation is authorized and directed to make the following payments in lieu of taxes:

(1) Payments shall be made in lieu of real and personal property taxes on any electric utility system or other property acquired by the Corporation pursuant to section 15 (d) of this act.

(2) Payments shall be made in lieu of business, franchise, excise, and other similar State and local taxes allocable to any electric distribution or related facilities acquired by the Corporation pursuant to section 15 (d) of this act and temporarily operated by the Corporation.

(3) Whenever the Corporation determines that the tax revenues of any State, county, district, or other taxing unit have been substantially affected by the acquisition of real or personal property or any interest therein by the Corporation other than property subject to clauses (1) and (2) of this subsection, and that the loss sustained thereby by such taxing unit has not been offset by gains derived by that unit from the operations of the Corporation, payment in an amount equal to the excess of such loss over such gains shall be made in lieu of real and personal property taxes on such property.

(b) As soon as practicable after the Corporation acquires property on, or by virtue of the operation of, which payments in lieu of taxes are to be made, the Corporation shall determine the average amount of the taxes paid or payable to the taxing unit by the previous owners on or by virtue of the operation of such property during the last 3 years, or such portion thereof as the property was subject to taxation, preceding the Corporation's acquisition thereof. On the date or dates on which each such tax is next due and payable according to law, or as soon thereafter as practicable, and at the corresponding time or times during each succeeding year, the Corporation shall pay such average amount so determined, or such lesser amount as may be required by subdivision (3) of subsection (a) of this section, to the respective officers or agencies to which said taxes would be paid had the property remained in private ownership, such payments to be distributed in the same manner and in the same proportions as the taxes in lieu of which the payments are made or in such other manner or proportion as the State legislature may direct.

(c) If the United States or any agency or instrumentality thereof is required by statute or agreement authorized by statute to make any payments in lieu of taxes on any property, or to pay any portion of the revenue derived from any property, the use thereof or any products produced therefrom, transferred to the Corporation pursuant to section 9 of this act, the Corporation shall continue to make such payments after the consummation of the transfer. The payments provided by this subsection shall be in lieu of any payments otherwise authorized by this section.

(d) No payment authorized by this section in lieu of any tax shall be made on account of properties which the Corporation shall have disposed of prior to the date on which such tax becomes due and payable. For the purposes of this section property owned or acquired by the United States shall be deemed to have been acquired by and to be the property of the Corporation. The determination of the Corporation of the necessity of making any payments under this section and of the amounts thereof shall be final.

(e) The payments authorized under this section are in lieu of taxation and the Corporation, its property, franchises, and income are hereby expressly exempted from taxation in any manner or form by any State, county, municipality, or any subdivision or district thereof.

(f) The Corporation shall, not later than 5 years after the enactment of this act, submit to the Congress a report on the operation of the provisions of this section, including a statement of the distribution to the various taxing units hereunder; the effect of the operation of the provisions of this section on State and local finances; and appraisal of the benefits of the program of the Corporation to the States receiving payments hereunder, and the effect of such benefits in increasing taxable values within such States; and such other data, information, and recommendations as may be pertinent to future legislation.

USE OF PATENTS

SEC. 24. (a) The Corporation, as an instrumentality of the Government of the United States, shall have access to the Patent Office of the United States for the purpose of studying, ascertaining, and copying all methods, formulas, and scientific information (not including access to pending applications for patents) necessary to enable the Corporation to use and employ the most efficacious and economical processes in the course of its operations. Except as provided in subsection (b), any owner of a patent whose patent rights may have been thus in any way copied, used, infringed, or employed by the exercise of this authority by the Corporation shall have as the exclusive remedy a cause of action against the Corporation, to be instituted and prosecuted in the appropriate district court of the United States for the recovery of reasonable compensation for such infringement. The Commissioner of Patents shall furnish to the Corporation, at its request and without payment of fees, copies of documents on file in his office.

(b) Any invention or discovery made by virtue of and incidental to service to the Corporation by an employee of the Government of the United States pursuant to section 19 of this act or otherwise, or by any employee of the Corporation, together with any patents which may be granted thereon, shall be the sole and exclusive property of the Corporation, which is hereby authorized to grant licenses thereunder, and under any other patents owned by it. The Corporation may pay to the employee making any such invention or discovery such sum from, or percentage of, the income from the sale of licenses as it may deem proper.

STATE COMPACTS

SEC. 25. The consent of the Congress, subject to the provisions of this section, is hereby given the several States to enter into agreements and compacts between or among any two or more States (1) to further and supplement on behalf of the States the purpose of this act, and (2) to carry out on behalf of the States appropriate projects and activities in relation thereto: *Provided, however*, That no such agreement or compact shall become effective or binding upon the States parties thereto unless and until it shall have been submitted to the Corporation and ratified by Congress. The Corporation shall recommend the ratification of any such agreement or compact if it finds such agreement or compact and the projects and activities contemplated thereby, to be feasible, practicable, and appropriate to and consistent with the policies and purposes of this act, and shall, insofar as practicable, cooperate with and furnish information and assistance to the States for the purposes of

negotiating, entering into, and carrying out agreements and compacts pursuant to this section.

PENAL PROVISIONS

SEC. 26. (a) All general penal statutes relating to the larceny, embezzlement, conversion, or to the improper handling, retention, use, or disposal of public moneys or property of the United States shall apply to the moneys and property of the Corporation and to moneys and properties of the United States entrusted to the Corporation.

(b) Any person who, with intent to defraud the Corporation, or to deceive any director, officer, or employee of the Corporation or any officer or employee of the United States, (1) makes any false entry in any books of the Corporation, or (2) makes any false report or statement for the Corporation, shall, upon conviction thereof, be fined not more than $10,000 or imprisoned not more than 5 years, or both.

(c) Any person who shall receive any compensation, rebate, or reward, or shall enter into any conspiracy, collusion, or agreement, express or implied, with intent to defraud the Corporation or wrongfully and unlawfully to defeat its purposes, shall, upon conviction thereof, be fined not more than $5,000 or imprisoned not more than 5 years, or both.

REPEALER PROVISIONS

SEC. 27. All acts or parts of acts in conflict herewith are hereby repealed, so far as they affect the operations contemplated by this act. Effective as of the date the transfers authorized by section 9 (a) of this act become effective, the act of August 20, 1937, entitled "An act to authorize the completion, maintenance, and operation of Bonneville project for navigation, and for other purposes" (50 Stat. 731), as amended, is hereby repealed.

SEPARABILITY PROVISIONS

SEC. 28. If any provision of this act or the application of such provision to any person or circumstances shall be held invalid, the remainder of the act and the application of such provision to persons or circumstances other than those to which it is held invalid shall not be affected thereby.

CONSTRUCTION OF ACT

SEC. 29. This act shall be liberally construed to carry out the purposes of Congress to provide for the disposition of and make needful rules and regulations respecting Government properties entrusted to the Corporation, provide for the national defense, improve navigation, control destructive floods, and promote interstate commerce and general welfare.

## We Just Can't Afford the Brass Hats' Dream

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Morning Tribune of December 21, 1945:

WE JUST CAN'T AFFORD THE BRASS HATS' DREAM

If the armed forces are unified properly, the cost of national defense will be lowered materially. Even with wasteful duplication eliminated, however, the cost of adequate defense will be a heavy financial burden on the American people during the years to come.

Interest on the national debt of $260,000,000,000 will require an annual outlay of $5,000,000,000. Other fixed costs of Federal Government will be at least $11,000,000,000 annually. If the people embark on some addditional weifare programs, the cost will be greater. Some reductions must be made in the amount of national indebtedness if our well-being is to be safeguarded.

Without debt retirement, however, we seem destined to raise at least $16,000,000,000 annually for basic governmental requirements outside of national defense.

It is estimated that Federal receipts during the fiscal year 1946 will amount to $39,000,000,000. Congress already has reduced taxes for 1947 by more than $5,000,000,000, and the taxpayers expect greater reductions. The 1947 budget estimates about to be submitted to Congress are expected to call for expenditures close to $50,000,000,000—or at least $16,000,000,000 more than estimated receipts.

Drastic reductions in Federal expenditures are essential if we are not to continue piling up the national debt and, of course, the interest charges on the national debt.

Those responsible for national defense apparently have given little thought to such a possibility. They serenely go ahead making proposals for national defense which, in addition to showing little consideration of the implications of the atomic era and attempts to organize collective security, show singular unawareness of the financial limitations of even the richest body of taxpayers in the world.

Senator TAFT estimates the armed forces proposed annual budget at $9,000,000,000. Others compute the proposals as calling for annual outlays of $11,000,000,000. This, mind you, solely for postwar defense—not for care of the disabled of previous wars, pensions to dependents, etc.

If Senator TAFT's $9,000,000,000 computation of armed forces' demands is added to the inescapable $16,000,000,000 basic expenditures, the demand on the taxpayers during the years ahead will be $25,000,000,000. And not a penny for debt retirement.

Senator GEORGE, one of the shrewdest members of the Senate Finance Committee, estimates that the most the Federal Government can raise by taxation during those years would be $18,000,000,000.

It does not require much statesmanship to comprehend that some things some folks want done are not going to be done by taxpayers in quest of a better life after the arduous years of war and its immediate aftermath.

When the Army awakens to the facts of life in peacetime, it will realize that the limitless resources and unquestioned compliances it rightly enjoyed during the crisis have come to an end. The people will give the armed forces a generous amount of money for national defense, but what they give will be a fraction of what was given to fight a war.

That money will be expected to provide a strong navy, a strong air force, a small but highly trained professional army, an effective national guard and Officers' Reserve Corps and continuing scientific research into new forms of warfare.

If intelligent use is made of these reduced funds, the defense of this country will be assured.

While peace seems assured, the armed forces must not count on more than four or five billions annually for total defense outlay. They may have to get along with half that sum.

The Army hasn't the slightest realization of this prospect. Instead of trying to shape a realistic defense program, it is daydreaming of what it will do with a full year of the time of every physically fit American male youth between the ages of 18 and 22 for all the years ahead.

When an unnamed Army officer recently was quoted as saying the War Department would compromise on the less costly, more politically possible 4 months' training program proposed by the National Guard Association of the United States, and the American Legion, the War Department officially repudiated the report. The brass hats in the Pentagon are still insistent on 12 months of universal compulsory military training in peacetime for every American youth.

Their proposal, it should be understood, has nothing to do with relief for veterans still overseas. The trainees sought by the brass hats would not be subject to overseas service. Replacements for overseas will continue to be supplied from selective service or volunteers.

Compulsory peacetime training as the War Department proposed it last February would add $4,500,000,000 annually to defense expenditures for Navy, Air Force, Regular Army, and research.

The War Department now says it could train 1,000,000 youths for 1 year at an annual cost of $1,720,000,000. No explanation is offered for such a drastic reduction in cost in an era of rising costs.

But the Nation hasn't even a billion and three quarters to spend annually for a form of national defense whose utility is disputed by many competent authorities. We want better value for our defense money, and we think we can more usefully employ the time of our youth from an educational standpoint. It's time for the War Department to come down to earth.

## Leif Ericsson Statue Should Be Erected in Capital

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. HAGEN. Mr. Speaker, to the people of Norwegian descent, and many others, it has been a source of wonder why an appropriate statue of Leif Ericsson, the first discoverer of America, has not been erected in the National Capital.

On November 26 I introduced House Joint Resolution 279, authorizing the erection of a statue in the District of Columbia and providing an appropriation for the preparation of the site and the erection of a pedestal upon which to place the statue. A joint resolution also was introduced in the Senate by Senators YOUNG, SHIPSTEAD, MAGNUSON, and WILEY.

There has been considerable sentiment on the part of newspapers and individuals for the erection of this statue.

A recent editorial on the subject, which appeared in the Washington (D. C.) Star, dated November 18, 1945, follows:

LEIF ERICSSON MONUMENT

Four Members of the United States Senate have joined to sponsor a resolution providing for the erection of a monument to Leif Ericsson in Washington. If the proposal is approved, the first known European discoverer of North America will have an appropriate memorial in the Federal city where Christopher Columbus already is commemorated abundantly. The rivalry between the

partisans of the two venturers probably never will disappear, and there is no particular reason why it should. Dozens of men probably found the New World from Europe. The American Indians and the Eskimos—hundreds of thousands of both groups—came to it from the Orient perhaps as much as 10 milleniums ago.

Leif Ericsson's visit is interesting because it was convincingly recorded. He was a son of Eric the Red, the founder of the earliest Scandinavian settlements in Greenland. In 999 he went to the court of King Olaf Tryggvason, in Norway, and was commissioned by him to return to Greenland and proclaim Christianity there. Driven far out of his normal course by contrary weather, he came in the year 1000 to a shore of which he had previously had no knowledge—a place which he called Vinland, Vineland, or Wineland the Good. The name indicates the presence of grapes in quantity. Nobody knows certainly what area was meant, but it may have been southern Nova Scotia or even Rhode Island.

The saga designated numbers 544 and 557 in the Arne-Magnaean collection in Copenhagen tells how Leif Ericsson took samples of selfsewn wheat, more likely corn, and mosur wood and carried them in his ship to his father's home in Brattahlid in Greenland. Thorfinn Karlsefni, a scion of a prominent Icelandic family, 2 years later led an expedition of a hundred and sixty men and some women, including his wife and a daughter of Red Eric, to a country they described as Helluland from its large slabs of stone, theoretically Labrador, and subsequently to a thickly wooded territory they called Markland, maybe Newfoundland. Still later Thorfinn and his companions sailed south for a long time to the mouth of a river, conceivably the Connecticut or the Hudson, and attempted a settlement there. Skraelings, supposedly Beothuk or Micmac Indians, after a few weeks drove the colonists north to Streamfiord. Eventually, in 1006 the Vinland enterprise was abandoned and the survivors returned to Greenland.

But the legend survived the failure and it still makes good reading, especially as told by Maurice Hewlett in fictional form in Gudrid the Fair. No one, admittedly, knows what Leif Ericsson or Thorfinn Karlsefni looked like. If either or both of them are to be represented in the projected monument, the sculptor must rely upon his imagination. Even so, it will be fitting and proper for them to be remembered in Washington.

## Why Take It to Congress?

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. ANGELL. Mr. Speaker, under leave granted heretofore, I wish to extend in the CONGRESSIONAL RECORD the following editorial from the Oregonian, published in my district, in its issue of December 21, 1945:

WHY TAKE IT TO CONGRESS?

The National Constitution designates the President of the United States as Commander in Chief of the Army and Navy. The scope of his power in that regard has been passed upon a number of times by the United States Supreme Court. The ruling decisions hold that by virtue of his position he has undoubted power to establish rules and regulations for the government of the Army and Navy, or may modify or repeal or create them anew, and that such rules and regulations cannot be questioned on the ground that they are unwise.

This page is not opposed to coordination of the armed forces. We are for it. But it seems to us that in determining upon the manner in which coordination shall be attempted, the power of the President of the United States to establish rules and regulations and change them at will has in its flexibility a profound advantage over acts of Congress, which if found of poor or questionable workmanship can be corrected or modified only by convincing a majority of two Houses of Congress just what ought to be done about it.

Mr. Truman, in his message urging Congress to enact laws unifying the armed services, acknowledges by strong implication his own power to coordinate the Army, Navy, and Air Force. He argues that with other problems before him, the President cannot be expected personally to balance either the organization, the training or the practices of the several branches of national defense, but should be able to rely for that coordination upon civilian hands at the Cabinet level.

Granted. But we believe that the President has the authority, without sanction of Congress, to summon chiefs of staff and designated high commands into round-table discussions presided over by the Secretary of War or the Secretary of Navy, whichever he may choose, and with that Cabinet officer empowered in the President's name to umpire points of controversy, direct removal of duplications, establish change in practices and weigh claims for dominance in men and equipment of this or that branch of the service as the science of defense shall dictate.

The President can obtain reliance for coordination upon civilian hands at the Cabinet level without, in this period of fluidity of ideas on relative importance to offense and defense of the three armed services, basing it upon the rigidity of an act of Congress.

The Nation is at peace. There is no foreseeable prospect that it will soon be drawn into another war. It is a time that lends itself to exploration into the field of unification of the armed services. But if by unforeseen circumstances we should be drawn into war before an inflexible act of Congress has been given the test of trial and error we may find a less effective coordination than we had in the war that has ended.

The unification plan that has the presumptive endorsement of the President comes from the War Department. It is supported by the Army from top to bottom. It is opposed by the Navy from top to bottom. Each service has its friends and sympathizers in Congress. In so complete a split of opinion, one who is of open mind is prone to suspect that the scheme in its scope is founded in jealousy on the part of the Army and that opposition is founded in the pride and traditions of the Navy.

Since the founding of the Republic the Navy has been, in the sense of permanency, the Nation's first line of defense. We have never had a real army except in time of war. We have built up the Navy, and at times have sent it round the world to awe other nations. When it came home or made periodical visits we in ports received it with banners and bands and the blowing of whistles. It has embodied glamour and romance, and popular notice. But in peacetimes a skeleton army has been immured in mainland, Alaska, or island posts where nobody pays any attention to it except civilian neighbors. We have in consequence a navy puffed up with its importance and an army that in peacetime suffers an inferiority complex.

As we have said, we are for coordination, but we question whether, in this background, Congress will be able to act fairly and intelligently, and with a foresight that will provide unification equal to coordination by the direction of an Executive who can instantly correct flaws in the system if any shall develop.

## "I Don't Deserve That Medal"

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. JUDD. Mr. Speaker, at the Christmas season and at a time when mankind is trying new ways in the effort to achieve peace and good will on earth, we need to be reminded that the one organization that binds together people in all nations in ties that even war cannot break is the Christian Church. As one who was privileged to spend 10 years as a Christian medical missionary in China, including visits and study in Japan, I am including a most inspiring account of how the Christian faith changes the hearts of men in every land. It consists of extracts from a letter written by a teen-age soldier to a friend in his home church. The full story is in Fellowship for November 1945:

"I DON'T DESERVE THAT MEDAL"

You asked about my medal. I haven't told the story of it to anyone, and you will see why when you hear about it. I am not very proud of it, and yet there isn't a thing I can do about it now without revealing a story that would get my new friends into trouble. You may tell the story so long as my name is never attached to it. It is now 2 a. m. Tomorrow I go off to the battlefield. I may never get home again, and I want someone to know that I don't deserve that medal. I didn't earn it.

It happened this way: I was captured by the Japanese with five of my pals. We were marched along through the jungle with bayonets in our backs. As we marched toward the Japanese camp I had to see my comrades one by one killed, mutilated, torn limb from limb. As I watched them fall I knew that within a few minutes I, too, would be killed as they had been. But somehow at that moment my only thought was "the sooner the better." Life for me was over. I said the Twenty-third Psalm. I said the Lord's Prayer. And then I started to think things over. A good bit of the Yankee spirit stayed with me. Die I must, but I determined not to let my captor see my fear.

Trembling from head to foot, marching in mud up to my ankles, with a bayonet sticking in my back, I began to whistle the way I used to when I was a small boy and had to go through a dark street. So I whistled as loud as my trembling lips would let me. After a while, to my surprise, I realized that I was whistling—

"We gather together to ask the Lord's blessing;
He chastens and hastens His will to make known;
The wicked oppressing cease then from distressing,
Sing praises to His name, He forgets not His own."

Suddenly, from my reverie, I became aware that someone had joined me in my whistling. No, it couldn't be, but it was—my Japanese captor. He, too, was whistling the hymn. Soon we both broke into words, he in Japanese, I in English. "The wicked oppressing cease then from distressing. * * * He forgets not His own." Gradually the power of the hymn made me relax, and must have had the same effect on him, for soon I felt his gun fall into place. And still later he caught up with me and we sang, he in Japanese and I in English.

I was interrupted in my thinking by his words in perfect English: "I never cease to wonder at the magnificence of Christian hymns." Startled by his English, I jumped and we both laughed. Soon we were talking. I asked where he had learned to speak English, and he replied that he had gone to Christian mission schools. "Not Glory Kindergarten?" I asked. "Why, I started in Glory Kindergarten," he replied. "How do you know it?" Then I told him how in Sunday school we had studied about the Congregational schools and churches. We had raised money for Glory Kindergarten and had sent over gifts for them.

Then followed a conversation that is impossible to relate—one that few men have ever had with one another—when surface things are swept away and the soul stands out on top. We talked of war and how the Japanese Christians hate it; of Christianity and its power in the world, of what it would mean if people would ever really dare to live it; of the incomparable value of the missionaries; of Kagawa; of our own ideals, for our homes, our jobs, and our future families. And finally, at his suggestion, we knelt in the mud and prayed for suffering humanity around the world, for "His peace that passeth all understanding," and for peace again on earth with good will toward men.

When we arose he asked if I would take him back as a prisoner to the American headquarters. He said that this was the only way he could live up to his Christianity and thus help Japan to become a Christian nation; and on the way back he found in various fox holes other Japanese Christians, and they, too, joined me as we walked toward the American headquarters. I shall never forget the hope and joy that came into their eyes as my Japanese friend unfolded to them, one by one, as he met them, how we found each other, and why and where they were being taken. All the way back we talked of the Christian religion.

When we neared camp, by mutual agreement they put on poker faces and somber looks, and I, gun in hand, marched them into camp. After the war is over they will spend their lives keeping alive and spreading an ever-growing Christian community in Japan.

So, you see, I don't deserve a medal for the most wonderful experience of my life. You surely see now why I don't want to talk about my medal.

## Deflating Agriculture

EXTENSION OF REMARKS

OF

### HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. LEMKE. Mr. Speaker, I am talking to you today on behalf of the farmers—about those who till the soil and feed the Nation. I am also speaking in behalf of the farmers' friends—the small businessman and the laborer. There is not a businessman or a laborer in our Nation whose prosperity does not depend upon the prosperity of agriculture—whose welfare is not linked and intermingled with that of the farmer.

The war is over. The farmer is again left holding the bag. On every hand, agricultural prices are tumbling. The farmer is not being deflated. He was never permitted to become inflated. He was urged not only to feed our own Army but the armies of the United Nations.

The sad thing is that Congress and the Nation have been led to believe that the farmer is rolling in wealth. Some Members of Congress do not understand that all the farmer has been getting from the Government is lip service. Up to 1946 no farm legislation has been passed that gives to the farmer price protection.

In 1932–33, and again in 1938–39, agricultural prices and income went into a complete collapse and our national income suffered in the same ratio—only the war saved the situation. Had a cost-of-production bill been passed, no such economic disaster could have overtaken our Nation.

The farmer himself, however, has become conscious of the fact that he is underprivileged. But he need not be underprivileged. If he had asserted himself he would long ago have gotten cost of production—100-percent parity.

I know the farm situation. I know it from boyhood experience, and more recently from contact and observation. I know it from the time that my father paid 12 percent interest and a bonus, and used to sell his wheat for 37 cents a bushel. I know it from the time that my mother sold eggs for 7 cents a dozen and butter for 6 cents a pound.

I know it from the time that taxes were $8 for 160 acres, shoes $1.50 a pair, and overalls 50 cents, and a binder cost less than $100. I know it from the time that the youngsters had to go barefoot because the family income did not permit shoes, and the mothers were kept busy patching the seats and knees of the youngsters' trousers. I know it from pioneer days and low prices—from the time that the prairie was ours for the taking.

I am aware that because of five abundant crops and war prices farm conditions have apparently improved. I know that the farmer realizes that these conditions will not continue. I know that the farmer realizes that he has been living in a fool's paradise. He realizes that in order to keep the armies going he had to wear out all his farm machinery, and work his children and old folks from 14 to 18 hours a day. If he had lived in a city he would have been arrested for violating the child-labor laws and cruelty to the aged.

He worked night and day to keep the war machinery supplied with food. His home and his buildings were permitted to depreciate—go unrepaired and unpainted. He kept his farm implements going until they fell to pieces. In many cases he worked in rags. This while our Government was supplying foreign civilians with the working clothes and the farm machinery that by right were his. He produced the crops necessary to win the war.

He lived on his past accumulations—on the accumulation of farm machinery, a home, granaries, fences, barns and other buildings, and improvements. Many of these must now be replaced and others reconditioned. He has to start from scratch. His accumulated wealth is virtually gone. The mortgage he paid off will have to be replaced. He will again be in the red unless he gets cost of production.

He knows that in 1939 the average net income per farm family in North Dakota was only $685. He knows that in the same year the net annual income per farm family in all but 8 or 10 States was less than $800. He knows that agriculture produces 82 percent of all new raw wealth; that the miner, lumberjack, fisherman, and others produce only 18 percent. He knows that industry, commerce, and finance simply process and distribute that which in the first place must come from the earth.

The farmer realizes that he is discriminated against and is not getting his fair share of the new wealth he creates each year. He realizes that there will again be lower prices, and that there will again be poor as well as good crops. He realizes that in order to measure his future prosperity, you must measure his income over a period of years. He knows that in considering his future welfare you must take the average and not select only a few favorable years.

The farmer knows that he never got over 75-percent parity. He knows that the Department of Agriculture shamefully kept agricultural prices down by juggling figures. He knows that the Department in 1934 and since, reduced his income by $2,000,000,000 a year. This was done under the excuse that a mistake of $2,000,000,000 had been made in figuring the farm income during the basic period of 1910–14. He knows that the parity scheme was proposed to resist the farm demand for cost of production.

Now that this cruel war is over, the farmer will again be made the goat. He will again be made the shock absorber, unless Congress assures him cost of production. For 30 years the Government has farm boarded, triple A'd, OPA'd, WPB'd, subsidized, parity'd, penalized and deceived the farmer. He has been rolled back and regimented by an ignorant bureaucracy. In the words of the world's greatest sculptor, Gutzon Borglum, "They are determined to make the farmer dependent in order to control the source of all independent thought."

These bureaucrats not only abused the farmer's patience but suppressed the truth and falsified the facts. They gave him a new deal, a double deal, with stacked cards, loaded dice and points. They compelled him to wear out his old tires looking for a second hand inner tube, and to use up his gasoline chasing AAA agents to get permits for this and that.

Then when he got the permit he discovered that the combine, tractor or drill, cream separator or egg beater, the hoe or pitchfork he was supposed to get was somewhere in Europe, Asia, India, Canada, or Africa. They limited and rationed him almost out of business.

I repeat in the past the farmer has been fleeced and made to believe that he was being helped. His production was curtailed and restricted. His hogs and calves were wantonly destroyed, and his wealth curtailed. Under the philosophy of the abundant life by scarcity a former Secretary of Agriculture told him what he could plant and what he could not plant, what he could wear and what he could not wear, that he could eat or consume, or that he could not eat or consume the products of his own labor.

He was penalized 49 cents a bushel for winter wheat planted 7 months before the law was passed. It became a crime for his wife to grind in a coffee mill a few pounds of wheat raised on their own farm and bake it into bread. Under this law the Department of Agriculture filched from the farmers over $20,000,000 in penalties. Some farmers burned their wheat rather than to submit to this extortion.

About 2 years ago the former Secretary of Agriculture bungled some more. He asked the farmer to increase his hog and poultry production 20 percent. Then the Food Administrator prohibited him from marketing these hogs. The loss in feed and dockage for overweight and underweight was the farmer's. The result of these blunders is a shortage of ham, bacon, and pork products.

Again, the farmer is still hounded by the Federal feed and seed loan collectors. The Government canceled the franchise tax of the Federal Reserve banks and the railroads. We are now asked to cancel $42,000,000,000 lend-lease for foreign nations. We are asked to cancel the $15,000,000,000 they still owe us from World War I. These nations now ask that we give—not loan—them billions more.

Great Britain now offers to settle by promising to pay $1 on every $60 of the $34,000,000,000 she owes us, provided we give her an additional $4,400,000,000 at 1½ percent interest. The truth is that she will promise, but she will not pay back even $1 out of $60 on the $34,000,000,000, or 1 penny on the $4,400,000,000. She will call us "Uncle Shylock" instead. The time has come for our Uncle Sam to regain his senses and cut out these foreign flirtations. These nations have neither virtue nor decency left. They are just gold diggers and bad company for Uncle Sam. They play him for a sucker.

But when the farmers ask the Government to cancel the old feed and seed loans they get the cold shoulder. So far we have not been able to get a majority of Congress to support a resolution to cancel these old loans. The Farm Credit Administration is opposing this cancellation. They claim that they collected—should be extorted—$10,000,000 on these loans.

Yes, they got their pound of flesh. In some cases where the husband died, they refused to allow the widow funeral expenses. In other cases, they garnisheed the farmer's wages long after they had taken his farm. I know of no buzzard that goes after his carrion with more zest than the Farm Credit Administration buzzard parading under the authority of the Government of the United States.

During the war one set of bureaucrats told the farmer when he could buy a tire, a stove, a washing machine, a cream separator, a tractor, a plow, or a combine. This so that they could give them to people of other nations—to bribe good neighbors with. Another set of bureaucrats drafted the sons and husbands essential to agriculture. They told the parents and the wives that if they, their grandparents, and little children could not do the work of their sons and husbands, that then they could substitute imported Jamaicans and Mexicans.

Then, in place of canceling the old feed and seed loans, Congress added insult to injury by raising the interest from 3½ to 4 percent on Federal land-bank loans. One and a half percent interest on foreign loans, that never will be paid, but 4 percent on agricultural loans. The Government's treatment of agriculture—the backbone of the Nation—is a sordid picture.

The farmers compose about one-fourth of our population. Ultimately, in self-preservation, they will unite solidly for justice. Why not now? If they ever organize with the same unity that labor has organized, then they will get what they are entitled to. Then they will get cost of production. The war has not solved the agricultural problem. There will again be deflation—a financial collapse. This unless Congress passes the cost-of-production bill. This bill, and this bill alone, can protect the farmer. It is the solution to the farm problem.

For this reason I again introduced the cost-of-production bill, H. R. 2861. This bill is the combined work of many Members and farm leaders. It was first introduced in 1933. Since then, it has been improved and reintroduced in every session of Congress. This is the final and streamlined twentieth revision and edition. This bill has had the support of over 600 Members of Congress since its first introduction. It, at one time, had as many as 186 Members sign a petition at the Speaker's desk, asking that it be brought up for final disposition on its merits.

The interest on our $300,000,000,000 public debt will have to be paid. This cannot be done unless the basic industry—agriculture—is prosperous. This bill when passed will taper off inflation—the $28,049,136,408 of new paper money that we printed for cost-plusers and lend-leasers. This is five times as much money as we ever had in circulation before. After the last war, we nearly wrecked the Nation by deflating our currency $800,000,000. This time, unless this bill is passed, there may be a deflation of five or ten billion dollars overnight.

This bill would give the farmer the average cost of production of 43 principal agricultural products. Such average cost of production would be determined after public hearings, participated in by representatives of farmers' organizations. It would include depreciation and soil depletion and all items of cost, including production expenses, interest, taxes, wages of farm and family labor, a return of 4 percent on farm property equity and compensation to the average farm operator equivalent to the average weekly earnings of the industrial workers, as found and determined by the Secretary of Labor. Can any honest person object to that?

At present nearly all agricultural products sell below the cost of production price. Under this bill, the farmer would get for choice and prime finished steers $22.61 per hundred pounds; for veal calves, $19.20; for lambs, $22; hogs, $22.25; milk, $5 per hundred pounds. He would get $1.77 per bushel for corn, $2.18 for wheat, $1.19 for oats, $1.28 for barley, and so forth. These are the minimum, average, year round, cost of production prices. They are the floor, not the ceiling.

There is nothing confusing about this. That does not mean a different price for individual farmers or individual steers. A choice steer is a choice steer in Texas, North Dakota, or Ohio. Under this bill the price would be the same plus freight differentials.

In order to prevent the passage of the cost-of-production bill, the ignorant bureaucrats offered the processor and the farmer subsidies. Subsidies are a fraud and a deception. Only the unthinking believe they can pull themselves up by their own boot straps. If these subsidies were paid out of present taxation, then for every 50 cents we receive, we would have to tax ourselves $1. The other 50 cents would go to the pay-rollers, to the pie counter brigade that collects and dishes them out to us.

But since we already are $300,000,000,000 in debt, subsidies had to be paid out of additional borrowed money. Now that our sons are returning they will be called upon not only to help pay the board bill of the "stay at homers," but to help pay the salaries and the board bill of the pay-rollers, together with interest.

Let Congress pass cost of production for the farmer. Then you will not have to subsidize anybody. The farmer is getting onto the hypocritical scheme of subsidizing and regimenting him. He is through with that ignorance. We are not going back to the Dark Ages. We are going forward to cost of production for agriculture.

Again, we are told by the bureaucracy that if we give the farmer what it costs him to feed the Nation, that then we will have inflation. Everybody but a mental defective knows that we have inflation. It was brought about by the Federal Reserve banks running the printing presses for the big boys—not for the farmers or the wage earners. It was brought about when we printed $28,049,136,408 for the cost-plusers and the lend-leasers—for foreign nations—where there never was over $5,700,000,000 before.

The only way to stop inflation is for the President and the Federal Reserve banking system to stop printing more money. Let them call in some of the surplus money they have issued. There is where inflation must be halted if you are going to halt it. Why should we cowardly argue all around the thing that needs correction and that needs watching?

Unless we get this bill passed and give the farmer cost of production, unless we get this bill passed which will prevent our Government from selling the farmers' domestic market to foreign horse traders, under the reciprocal trade agreements, there will again be thousands of foreclosures. There will again be trainloads of cattle and meat products—millions of bushels of wheat, corn, and flax—imported from Canada, Australia, and Latin America in competition with our farmers and ranchers.

Ultimately the farmers must unite for cost of production—why not now? Subsidies, roll backs, support prices, curtailment, and allotments are all side issues. They are a fraud and a deception upon agriculture. The farmer cannot continue to produce and feed the Nation for less than cost without enslaving himself and his family. Why should he permit bureaucrats with foreign ideologies to sell his domestic market to foreign nations? Why not demand cost of production and an embargo on all foreign importation and substitutes until cost of production, plus 5 percent, has been reached?

The fixed proportion of our national income and employment must consist of nondurable agricultural goods—food, clothes, fuel, transportation, and services that are destroyed through use each year. Otherwise we cannot continue to give full annual employment. Agricultural products built our railroads originally. The railroads did not build agriculture. Agriculture built steel—steel did not build agriculture. For all practical purposes, until recently, we were mainly an agricultural nation. Agriculture built our Nation as it stands today. Let us not destroy the goose that lays the golden egg.

## Iowa at Ninety-nine

EXTENSION OF REMARKS
OF
**HON. HENRY O. TALLE**
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 21, 1945*

Mr. TALLE. Mr. Speaker, a week from today the State of Iowa will complete its ninety-ninth year and enter upon its hundredth year of Statehood. In the centennial year that lies ahead much will be said, and properly so, in commemoration of what the good people of Iowa have done through 99 years of energetic and tireless effort to bring lasting benefits to the State and the Nation.

Nineteen hundred and forty-six will be a year devoted to retrospect. Very properly, the people of Iowa, to whom their motto "Our liberties we prize and our rights we will maintain" is so dear, will pay tribute to the pioneers who did the spade work. They broke the sod, built their simple homes, erected churches and schools, organized government, and bore with patience the burdens that must be borne by men and women who undertake to transform nature in the raw into fertile farms, busy cities, and the numerous business enterprises of prosperous farm and city life. The story of what has been accomplished in Iowa through 99 years is a truly great epic.

But 1946 will also be a year devoted to looking forward. Very properly, the people of Iowa will reaffirm their faith in the ideals of their cherished motto. They will renew their devotion to personal liberty, representative government and the American way of life. Iowa grew great in the inspiring atmosphere of those ideals.

Mr. Speaker, in the long stretch of years, a century is but the twinkling of an eye. Statehood began on December 28, 1846. But Iowa is still young; Iowa is vigorous; Iowa is enterprising. On December 28, 1945, the citizens of Iowa will look backward with pride to the accomplishments of 99 years. At the same time they will look forward to their centennial year with the determination that it shall be a banner year, and beyond that to another cycle during which other generations will move to even greater accomplishments because of the example set them by their forebears.

## Our American Government—What Is It?—How Does It Function?

EXTENSION OF REMARKS
OF
**HON. WRIGHT PATMAN**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. PATMAN. Mr. Speaker, for a number of years I have prepared, with the help of others who are given credit in the foreword, a booklet on Our American Government—What Is It?—How Does It Function? in question and answer form.

One university ordered 30,000 copies of this booklet from the Government Printing Office and sent them to all its exstudents.

The booklet has received wide distribution throughout the Nation and is used in many schools as a textbook. Members of Congress have purchased the booklet by the tens of thousands and sent them to their constituents, because it contains information especially about Congress and the three branches of the Government that is not usually contained in the textbooks that are used in the schools and colleges.

NEW EDITION

In the early part of the next session I expect to ask that a revised edition of this booklet be printed as a public document. It will not in the end cost the Government anything, as the sale and distribution is a source of revenue and is not a loss.

Typical of the new questions and answers that will be in the revised edition are the following:

Question. How many times has Congress declared war?

Answer. Only 11 times has Congress passed acts which can be considered as declarations of war, as follows:

1. War of 1812, June 18, 1812.
2. Mexican War, May 13, 1846.
3. Spanish-American War, April 25, 1898.
4. War with Germany, April 6, 1917.
5. War with Austria, December 7, 1917.
6. War with Japan, December 8, 1941.
7. War with Germany, December 11, 1941.
8. War with Italy, December 11, 1941.
9. War with Bulgaria, June 5, 1942.
10. War with Hungary, June 5, 1942.
11. War with Rumania, June 5, 1942.

Question. How many Vice Presidents have succeeded to the Presidency by reason of a vacancy in that office?

Answer. Seven. John Tyler served all but a month of President William H. Harrison's term; Millard Fillmore served over half of Zachary Taylor's term; Andrew Johnson served all but about a month of Lincoln's second term; Chester Arthur served about 3½ years of Garfield's term; Theodore Roosevelt served about 3½ years of McKinley's second term; and Calvin Coolidge filled out about 1½ years of Harding's term. Vice President Truman succeeded to the Presidency less than 3 months after the commencement of President Roosevelt's fourth term.

Question. What was meant by daylight saving time and war time?

Answer. The device of arbitrarily moving the clocks forward during the summer, so as to take advantage of the early daylight hours, was resorted to in Europe during the First World War, and was adopted in the United States by an act of March 19, 1918. This was called daylight saving, effective between last Sunday in March and last Sunday in October. This Federal act was repealed August 20, 1919; but with the advent of World War II Congress again took action, this time without limiting the effect to the summer months. Popularly this was called war time; it was terminated at 2 a. m. on Sunday, September 30, 1945, by Public Law 187, Seventy-ninth Congress.

Question. What is the President's flag and seal?

Answer. By custom, going back to President Hayes, the President has prescribed and used a coat of arms and a seal, but not until 1916 did he prescribe a Presidential flag. The flag then adopted by President Wilson had four stars only, and this fact, among others, led President Roosevelt to consider a new design when Congress established the rank of five-star admirals and generals. As finally promulgated by President Truman on October 25, 1945, the new coat of arms (which is the basis of the seal and also appears on the flag) shows the eagle in full color instead of all white, with the head turned to his own right (as is customary in heraldry) instead of to his left, and has a circle of 48 stars around the edge. The number of stars corresponds to the number of States, without any single star representing a particular State; the number will automatically change, as in the case of the flag of the United States, upon a change in number of States.

Question. What and when was VJ-day?

Answer. VJ stands for victory in Japan, and VJ-day is August 15. On that day in 1945, President Truman announced to the world by radio that Japan had accepted the conditions laid down by the Allies on August 11—namely, that the Japanese Emperor was

to be subject to orders of an Allied Supreme Commander. The actual signing of the surrender papers took place on board the U. S. S. *Missouri* in Tokio Bay on September 2.

Question. What and when was VE-day?

Answer. VE stands for victory in Europe; VE-day is recognized in the United States as May 8, 1945. At 9 a. m. (eastern war time) on that day President Truman announced the signing of the surrender of all German fighting forces at General Eisenhower's advance headquarters in Rheims. This military surrender was followed on the next day by a formal ratification in Berlin.

Question. Who appoints the Librarian of Congress, and how many Librarians have there been?

Answer. The Librarian is appointed by the President with consent of the Senate. In 145 years there have been but 10 Librarians, including the present incumbent, Luther H. Evans, appointed by President Truman. Of these, three served over 30 years apiece; John S. Meehan, 1829–61, Ainsworth R. Spofford, 1864–97, and Herbert Putnam, 1899–1939.

Question. What is the origin of the Great Seal of the United States?

Answer. The seal is carried over from the Continental Congress, one of the very earliest acts of the new Congress (September 15, 1789) stating that "the seal heretofore used by the United States in Congress assembled, shall be, and hereby is declared to be, the Seal of the United States." The design was adopted by order of the Continental Congress June 20, 1782, after the matter had been pending for 6 years. The seal has been recut three times (in 1841, 1883, and 1902) but always in strict compliance with the original design.

Question. What is meant by a "rider" on a congressional bill?

Answer. A "rider" is an extraneous provision incorporated in an appropriation bill, with the idea of "riding" through to enactment on the merits of the main measure. The practice is very old; in 1837 a "rider" on the fortifications appropriation bill would have provided for the disposal of the surplus funds in the Treasury. Under the rules any item of appropriation in a general appropriation bill that is not authorized by existing law nor in furtherance of projects already in progress is subject to a point of order (this is often waived by a special rule in the House); and the same with any provision "changing existing law," unless it is germane to the subject and designed to retrench expenditures (the so-called Holman rule). Occasionally a "rider" becomes law, without the point of order being raised.

An example of a legislative rider was contained in the appropriation rescission bill, which was vetoed by President Truman. The rider, which was not germane to the bill and wholly unrelated to the subject matter of the bill, provided that the United States Employment Service would be returned to the States in 100 days.

President Truman, believing that this subject should receive separate consideration and entitled to be passed upon by him separate and distinct from any other legislation, vetoed the entire bill to get rid of the rider.

Question. What is meant by "classified civil service"?

Answer. This term (commonly shortened to "civil service") refers to the body of public employees who are under the merit system set up by the Civil Service Act of 1883, as amended. This act provides in general for appointment through competitive examination, permanent tenure, promotion on merit, etc. At first, it applied to 13,924 out of the 131,000 employees then in Federal service; but under its terms Presidents (and occasionally Congress) have gradually extended its coverage until now it includes all positions, whatever the function or designation, and whether compensated by fixed salary or otherwise, unless specifically excepted by Congress or the President. In general, positions now outside the classified service are confidential or policy-making positions, temporary employments, or a few designated independent agencies.

A director of a land-grant college said this about the booklet:

The information contained therein is very comprehensive and it will be quite interesting to members of our staff here.

An executive in a women's political club stated:

I think it is so splendid that I want 35 copies for the executive body of our club.

The document is strictly nonpartisan and nonpolitical.

A county school superintendent in the Southwest writes:

It should be in every public school in the country. Certainly, every school teacher should have one available for the purpose of properly teaching the class in government the functions of our legislative bodies. It is a very valuable document.

UNITED STATES DISTRICT JUDGE COMMENTS

A former colleague of ours here in the House of Representatives, now United States district judge in the West, stated the following in a letter:

I am very anxious to have this document for free distribution with my compliments to the newly made citizens that get their naturalization papers through my court. In fact, I think the Government could well supply the document to all courts where naturalizations are held.

It is one of the most complete, concise, and easily understood statements concerning our Government that I have ever seen. I have made use of a large number of the first edition, and have about exhausted my supply.

Several United States district judges purchased them for the same purpose.

USED IN PROGRAM

A constituent wrote the following:

A friend of mine loaned me a copy of the booklet Our American Government—252 Questions and Answers, published in 1941, which you had sent her sometime in the past. I found it most interesting and based a DAR program on it.

MIDDLE WEST SUPERINTENDENT OF SCHOOLS

A school superintendent in the Middle West wrote the following:

Since the pamphlets or booklets have quite a bit of information not found in our regular reference books, they naturally became quite useful to the civics student. They were used as reference material and in classroom discussion.

These booklets bring in a detailed form a summary of the working of our Government right down from Capitol Hill.

I consider them a good addition to our reference material in social science.

USED BY HOME DEMONSTRATION CLUBS

An instructor in cooperative extension work in agriculture and home economics in a land-grant college stated the following:

I am hoping that you will send me copies to be used in helping the home-demonstration clubs develop programs that will lead them to be more efficient citizens.

The president of a large petroleum company in the Southeast stated the following:

It supplies the answers to many questions I have often wondered about.

IN NEW ENGLAND SCHOOLS

One college president in New England stated the following:

We would like to purchase 11,000 copies of this pamphlet for distribution in high schools.

Later, this same college president wrote the following:

The response to our offer to high-school principals to supply them free of charge with copies of Our American Government—What Is It? How Does It Function? has been so great that we find ourselves in need of a thousand copies to meet requests made on us.

We appreciate the opportunity, which you have afforded us of bringing this vital information to the students in our New England high schools.

These are a few of hundreds of letters commenting favorably on this document.

COST

The last one that was printed—House Document No. 228, Seventy-ninth Congress, first session—sold for 10 cents each by the Government Printing Office. Each Member of the House and Senate was allowed 150 copies for free distribution, which is sufficient to supply normal requests. Members of Congress were permitted to purchase these booklets for $17.50 a thousand if the order was placed in time for the printing to be done at the same time the Government Printing Office printed a supply for sale.

The new revision that is expected to be ready in the early part of 1946 will be the same size as House Document No. 228 and it is presumed that the cost will be about the same and may be obtained under similar conditions.

---

## America's Problem in the Postwar World

EXTENSION OF REMARKS

OF

**HON. HOMER D. ANGELL**

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. ANGELL. Mr. Speaker, in the midst of the Christmas season we can all rejoice and return thanks to Almighty God that the world is at peace for the first time in 7 years. With the ending of the war, many problems of great importance to the maintenance of peace are knocking for solution. The representatives of the leading nations of the world have had extended conferences and negotiations looking toward the adoption of definite plans which may keep the world at peace. The United Nations Organization is rapidly nearing the stage where plans may be put into effect which give promise of providing the mechanics for adjusting the dis-

agreements among nations by peaceful means rather than by force of arms. The world has learned through centuries of suffering, bloodshed, and death that force alone will not bring about peace on earth. Christmas this year should remind us of things that have not changed, and the terrible experiences of the past 4 years should have taught us that the abiding spirit of Christ brings the best, and the only enduring things in this mad world. More than ever, Christmas this year will be a sacrament of family fellowship, for the ties which the war has stretched across continents and oceans will be dearer than ever. As absent ones return, we should have happier homes now that we are realizing what home means. "On earth peace, good will towards men." For 1,900 years the world has tried other means and seen them all fail. Christ's way is largely untried, and unless Christian people speak and act now, it will be ignored in the shaping of a better, more Christian world.

Nothing except the ravages of the war itself has so roused the world as the discovery and use of the atomic bomb. It may well be said that we are now living in an atomic age. This great power now harnessed by the genius of man has not only revolutionized warfare but it has opened a storehouse of almost inexhaustible energy which scientists believe will be made available for civilian uses, making a great contribution to the welfare of the world.

There have just been concluded in Moscow conferences between the foreign ministers of the United States of America, the United Kingdom, and the Union of Soviet Socialist Republics which have resulted in reaching an accord between these representatives on many of the world problems now confronting us and which must be amicably adjusted if we are to win the peace as well as the war. Among the subjects considered at these conferences was the one having to do with the establishment by the United Nations of a plan and program for the control of atomic energy, outlawing it as an instrument of warfare and devoting its great powers to peaceful endeavors. On December 4, 1945, I introduced in the House a concurrent resolution having for its purpose a declaration by the Congress of the United States with respect to the control of atomic energy. The resolution reads as follows:

*Resolved by the House of Representatives (the Senate concurring)*, That the Congress hereby expresses itself as favoring the creation of appropriate international machinery within the existing framework of the United Nations Organization for international control and reduction of armaments and weapons designed for mass destruction of human lives, especially those involving atomic power.

As was recently said in an editorial in the Christian Science Monitor:

Steps to harness atomic energy to peace will strike the deepest chord in popular sentiment wherever the potentialities of the atomic bomb are known. The secrets of the bomb are not going to be shared until a suitable agency to control the bomb has been developed, along with systems of inspection to prevent its clandestine manufacture by any country. The biggest part of this task is ahead, and it is fraught with enormous pitfalls, and even greater opportunities. But the bomb has been faced—together—by those whom it threatened to divide irrevocably and disastrously.

The text of the communique at the close of the Big Three Conference in Moscow with respect to the control of atomic energy is of great significance and of great promise to a distraught world. The text with respect to this control is as follows:

VII. The establishment by the United Nations of a Commission for the Control of Atomic Energy:

Discussion of the subject of atomic energy related to the question of the establishment of a Commission by the General Assembly of the United Nations. The Ministers of Foreign Affairs of the Union of Soviet Socialist Republics, the United States of America, and the United Kingdom have agreed to recommend, for the consideration of the General Assembly of the United Nations, the establishment by the United Nations of a Commission to consider problems arising from the discovery of atomic energy and related matters. They have agreed to invite the other permanent members of the Security Council, France and China, together with Canada, to join with them in assuming the initiative in sponsoring the following resolution at the first session of the General Assembly of the United Nations in January 1946:

*Resolved by the General Assembly of the United Nations*, To establish a Commission, with the composition and competence set out hereunder, to deal with the problems raised by the discovery of atomic energy and other related matters.

I. Establishment of the Commission:

A Commission is hereby established by the General Assembly with the terms of reference set out under section V, below.

II. Relations of the Commission with the organs of the United Nations:

(a) The Commission shall submit its reports and recommendations to the Security Council, and such reports and recommendations shall be made public unless the Security Council, in the interests of peace and security, otherwise directs. In the appropriate cases the Security Council should transmit these reports to the General Assembly and the members of the United Nations, as well as to the economic and social council and other organs within the framework of the United Nations.

(b) In view of the Security's Council's primary responsibility under the charter of the United Nations for the maintenance of international peace and security, the Security Council shall issue directions to the Commission in matters affecting security. On these matters the Commission shall be accountable for its work of the Security Council.

III. Composition of the Commission: The Commission shall be composed of one representative from each of those states represented on the Security Council and Canada, when that state is not a member of the Security Council. Each representative on the Commission may have such assistants as he may desire.

IV. Rules of procedure: The Commission shall have whatever staff it may deem necessary, and shall make recommendations for its rules of procedure to the Security Council, which shall approve them as a procedural matter.

V. Terms of reference of the Commission: The Commission shall proceed with the utmost dispatch and inquire into all phases of the problem, and make such recommendations from time to time with respect to them as it finds possible. In particular the Commission shall make specific proposals:

(a) For extending between all nations the exchange of basic scientific information for peaceful ends;

(b) For control of atomic energy to the extent necessary to ensure its use only for peaceful purposes;

(c) For the elimination from national armaments of atomic weapons and of all other major weapons adaptable to mass destruction.

(d) For effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions.

The work of the Commission should proceed by separate stages, the successful completion of each of which will develop the necessary confidence of the world before the next stage is undertaken.

The Commission shall not infringe upon the responsibilities of any organ of the United Nations but should present recommendations for the consideration of those organs in the performance of their tasks under the terms of the United Nations Charter.

Mr. Speaker, the world is sick and troubled. It has gone through a long siege of bloodshed and destruction in which almost every nation on earth has participated at great cost in the lives of its people as well as its resources. We need reconversion, not only from war to peace but from brutality, selfishness, and greed to tolerance and charity. May we not hope, under the full fruition of the United Nations Organization, that we may establish liberty under law throughout the world as well as in our own beloved America. We have demonstrated that, through the great accomplishments of science and the energy and intelligence of our people, we can produce the necessities of life in abundance, far beyond the needs of our people. We need only to promulgate a working program by which the fruits of labor may be equitably distributed among our people in proportion to their contribution in order that all may enjoy the fruits of a beneficent providence. With the world at peace and the nations of the earth cooperating to maintain peace and a healthy exchange of products among themselves, we can look forward to an era of prosperity and well-being such as we have never witnessed before. Then we may say with Henry Van Dyke, in discussing the guideposts on The Footpath to Peace:

To be glad of life because it gives you the chance to love and to work and to play and to look up at the stars; to be satisfied with your possessions, but not contented with yourself until you have made the best of them; to despise nothing in the world except falsehood and meanness; and to fear nothing except cowardice; to be governed by your admirations rather than by your disgusts; to covet nothing that is your neighbor's except his kindness of heart and gentleness of manners; to think seldom of your enemies, often of your friends and every day of Christ; and to spend as much time as you can with body and with spirit, in God's out-of-doors—these are little guideposts on the footpath to peace.

As has been said:

Man is a selfish and self-centered animal, prone to concentrate on the acquisition of things for his own personal gratification. But by strange contradiction, man also has an

unquenchable realization that he is his brother's keeper, that there is a Golden Rule that must govern his actions if he is to attain and hold those things which he needs and craves; that there is no real happiness nor satisfaction in leading a narrow and selfish life.

Mr. Speaker, at this Christmas season so significant in world history, may we say with Charles Gordon Ames:

O God of purity and peace, God of light and freedom, God of comfort and joy, we thank Thee for our country, this great land of hope, whose wide doors Thou hast opened to so many millions that struggle with hardship and with hunger in the crowded old world.

We give thanks to the Power that has made and preserved us a Nation, that has carried our ship of state through storm and darkness and has given us a place of honor and power that we might bear aloft the standard of impartial liberty and impartial law.

May our altars and our schools ever stand as pillars of welfare; may the broad land be filled with homes of intelligent and contented industry, that through the long generations our land may be a happy land and our country a power of good will among the nations.

---

## Congress Faces the Problem of Inflation

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. PITTENGER. Mr. Speaker, it is hardly correct to say that there is one major problem that will face Congress when it reconvenes in January 1946. There are a number of problems which will demand attention. It is fair to say that inflation is one of those matters which we will hear a lot about, and in connection with which there will be many legislative proposals. It is not my purpose to define inflation, its cause, or its remedy, in these remarks. There may be many factors rather than just one development which will cause inflation. Different people have different ideas as to just what constitutes inflation, but one fact stands out and that is the fact that this country has the staggering public debt of $262,000,000,000. By whatever name you call it, the matter of Government finances is going to be almost at the top of the list of issues which will claim the attention of Congress. In this article I am going to submit an editorial and a couple of news items without making any argument for or against the statements they contain. I submit them to show what people are saying all over the country, because in almost every newspaper you will find some item dealing with the question of Government finances and you will always find that word "inflation" featured in some connection therewith. So, as we face the New Year, all of us will have forced upon us the fact that the Government has an enormous debt. Some say Government credit is badly broken, or bent, as the case may be. What do you think can and should be done?

The matter of a Federal financial policy, and its relation to this much-discussed word "inflation" is discussed in an able and interesting editorial in the New York Times for Friday, December 21, 1945, as follows:

THE REMEDY FOR INFLATION

Representative ROBERT L. DOUGHTON, chairman of the Ways and Means Committee, can see no prospect of further substantial tax reductions until we have "a balanced Budget or a near-balanced Budget." He is not hopeful about the prospects: "You can't tell what Congress will do. If it keeps on making appropriations and increasing peacetime expenditures, we just won't have a balanced Budget. If we get expenditures down under twenty-five or thirty billion dollars any time soon, I'd be surprised. If we can't pay as we go, I don't know how we'll ever catch up."

Mr. DOUGHTON'S remarks point to the most important domestic issue today. As long as the Federal Budget remains unbalanced, as long as the Federal Government continues to finance its needs by heavy borrowing, directly or indirectly, from the banks, it will increase the amount of money in circulation and the amount of new bank credit. This pours a constant stream of excess purchasing power into the economy, lowers the value of the monetary unit, and increases the upward pressure on prices and wages. It is, in fact, the major cause of inflation. And every other economic problem that we face, including those of wages and strikes, is conditioned by inflation.

We can solve this central problem only by bringing the Budget into balance. But this is not a problem that can be solved merely by passing a single bill. It is a problem that arises with every appropriation that is proposed, with every plan that is put forward. None of these can be solved merely on its own merits. Each of them must be solved in relation to its bearing on the Budget as a whole.

In his statement yesterday, signing the reorganization bill, the President candidly pointed out:

"While I anticipate that this act will result in some reduction of administrative expenditures in the agencies affected by reorganization plans, I do not consider it probable that we will generally save as much as 25 percent, as suggested in the act. I wish to point out, also, that administrative expenditures are only a small proportion of the cost of Government. Substantial savings in Government expenditures can come only from reductions in the Government programs themselves."

In a few weeks the President will present his Budget for the new fiscal year. The country will then know how serious the administration is in its efforts to head off inflation by the only possible method that can succeed—a return toward a balanced Budget, accomplished chiefly by a reduction of expenditures. But even if the administration proposes the right road, the country will still have to learn whether Congress intends to follow it.

Not to be outdone by the New York Times, the Christian Science Monitor has a thought-provoking news item, where the word "inflation" is featured. The item reads as follows:

YULE BUYING SHOWS PERIL OF INFLATION—"SKY" PRICES LOOM

(By Richard L. Strout)

Inflation is still the big economic problem of Washington.

The Christmas buying rush has accentuated it. Not only has it cleaned out stores of many of their items of consumers' merchandise, but it has convinced millions of Americans that something queer is happening to their dollar.

Economists wonder if the situation that followed World War I is going to be repeated.

Congress, meanwhile, has voted to end Presidential wartime powers on June 30, instead of 6 months later, as the President sought. Unless otherwise extended, this will remove many of the remaining Executive economic controls.

AMENDMENT DEFEATED

An amendment was offered in the Senate to extend the controls for a year instead of 6 months, but it was defeated 31 to 30, with 35 Senators not voting. This may prove to be one of the most important votes of the year.

Rightly or wrongly it has been charged that consumer goods were being held back till after January 1, when the excess-profits tax expires.

Now a new deadline is set. If inflation is going to send prices up, producers have an incentive for holding back goods for higher and higher prices. The new date of June 30 seems to set a new deadline for possible inflation slow-downs.

On paper, inflation has been pretty well held, according to the figures of the Bureau of Labor Statistics. Between August 1939 and October 1945 the cost of living has advanced theoretically only 30.7 percent, which is relatively little compared to World War I. From the time when Mr. Roosevelt issued the hold-the-line order, living costs have risen only 3 percent.

LABOR ASSAILS FIGURES

But labor has all the time denounced these figures.

It charges that the abstract statistics fail to give weight to quality deterioration. Also to the fact that sturdy, low-price prewar goods no longer are obtainable.

Millions of Americans visiting shop counters in the Christmas rush season have reached the same conclusion.

Prices have been held theoretically if you can buy the standard goods on which ceilings are placed, but try and find those goods!

Then, again, here and there price ceilings have been taken off. The price of citrus fruits doubled almost overnight, as one instance. The same jump occurred in other products. Housewives suddenly discovered what inflation restrictions had meant in their behalf during the war, and still mean in many products. Many shudder at the prospect of complete removal.

SNYDER WARNING

John W. Snyder, Reconversion Director, recently warned, however, that a feeling has grown up in the country that price stabilization will soon be repealed. In fact, the deadline of June 30, 1946, is now widely expected.

The demand for consumers' goods is nothing short of terrific. Some observers had thought there would be a buyer's strike if prices didn't come down and quality improve.

But the Christmas shopping drive seems to prove that the public, with a staggering amount of purchasing power behind it, will buy almost anything, no matter how shoddy the goods, no matter what the price.

Wholesale prices help tell the story.

Before Japan's surrender, wholesale prices were going down. They declined for a week thereafter.

But since then, according to Mr. Snyder, they have risen every week.

During the week ending December 1 the index of wholesale prices was at the highest in 25 years.

STEADY PRICE RISE

The raw-material price index also has been making a steady march upward following a short recession after VJ-day.

If America now has a good-sized inflation, nobody can say the public hasn't been warned.

It has been the one subject of economists' warnings and worries since the war started. Unlike World War I, the controls and restrictions to cope with it have been generally available. Against overwhelming odds, Chester Bowles, Price Administrator, has fought every step of the way.

But the demand for higher prices now—for a relaxation of controls—is at a new peak. Many observers regard it as doubtful whether Mr. Bowles' powers will be continued after June 30.

OTHER POSTWAR ERAS

At the peak inflation after World War I, the dollar had purchasing power of only 40 cents.

After the Civil War, it fell to 44 cents. After the Revolution, the dollar was worth only 33 cents.

At present, the equivalent purchasing power of the dollar, as compared to the normal just before the war, is 76 cents. Inflation already has nibbled 24 cents out of the dollar of fixed investments, pensions, life insurance, and the like. The economic pressures that caused the decline in the value of the dollar after World War I were feeble compared with the gigantic pressures now threatening postwar stability.

After World War I, public savings were only $27,000,000,000, today they are $145,000,000,000.

After World War I, currency in circulation was only $7,200,000,000, today it is $26,700,000,000.

Checking accounts showed balances of only $27,300,000,000 after World War I, contrasted to $69,100,000,000 today.

Nothing quite like the present inflationary prospects were known after the previous war. It is like the steel of a trap, just waiting to be released. If the right pressure is once put on the trigger, nothing can stop the inflationary trap from snapping.

One of the biggest dangers is that the public will lose confidence that the inflationary guard will be held. If everybody thinks prices are going up, then producers will hold back goods till prices do go up, and purchasers will scramble for goods quickly.

Mr. Bowles is the man standing in the breach, but it is doubtful what support he will get from Congress.

A final curiosity in the situation is the paradox of unemployment.

Forecasters had been making gloomy predictions of 5,000,000 unemployed at this time. Actually the number is less than half that. It seems very satisfactory—and is.

Mr. Speaker, the description of what has taken place during the Christmas season as outlined by Mr. Strout, deserves most careful consideration. You will note that he uses the word inflation in connection with his pointed comment.

"Line must be held against inflation, debt, says banker." With the above headline from another newspaper, the following report of a talk before a convention is of interest:

CHICAGO.—Holding the line against inflation and paying off the public debt are the two most important problems in domestic finance, John Clifford Folger, president of the Investment Bankers Association of America, declared at the IBA's annual convention here. Warning that inflation is here and has been here for some time, Mr. Folger said labor and business alike have a responsibility for its cure, adding that labor stands to lose just like everyone else.

You will note that Mr. Folger is very much concerned about what he calls inflation and this same line of comment will be found in numerous news items, addresses, and so forth.

PROBLEM OF GOVERNMENT FINANCES UNUSUAL

When Congress convenes in January, Mr. Speaker, it will have to deal with the financial structure of our Government, which is entirely different from anything we have ever had in the history of the country. In this discussion I mentioned the fact that we had a public debt of $262,000,000,000. Those were figures that had been determined by a columnist. The Library of Congress here at Washington has given me something a little different, but a few billions one way or the other probably does not matter. The Library of Congress has submitted to me the following figures:

*Total and per capita debt of the United States*

| | |
|---|---|
| Gross public debt and guaranteed obligations, Dec. 11, 1945—U. S. Treasury, Daily Statement, Dec. 11, 1945 | $278,173,584,518 |
| Estimated population, including armed forces overseas, Jan. 1, 1945—U. S. Bureau of Census Release, Series P-45, No. 6, May 22, 1945 | 138,955,469 |
| Average per capita debt—computed on basis of above figures | $2,002 |

No doubt all of us will now admit that we are in debt, although some persons may feel that they have sufficient funds on hand to meet their obligations. We know, however, that numberless other people are not so situated. In this connection, it is interesting to note that the franc has just recently been devalued and in connection with our problems, just what does that procedure mean? If we think back on how the French franc and the German mark lost their value following World War I, then we may want to define inflation in terms of cheap money. This is commonly known as printing press money. You need no argument to show what a tragedy would result in this country if our currency became valueless and people could then meet their obligations and pay their debts with that sort of money.

We need no argument either to establish the fact that savings accounts, life-insurance policies; and everything else would become worthless. So call it what you will, this problem of our country's finances and that somewhat uncertain thing called inflation, are going to be large matters when Congress reconvenes. Of course, there are other issues, such as the question of loaning money to Great Britain, Russia, and the rest of the world. Then, there is an acute housing shortage in this country which will demand immediate attention by Congress if existing Government agencies and private agencies are unable to cope with the situation. These are only a few examples of a long list of tremendously important things on the threshold of the year 1946.

## Petition Recommending Changes To Improve Services Rendered Veterans at Hospital Facilities

EXTENSION OF REMARKS

OF

### HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. HAGEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following petition submitted by Roy Grubstad, Spooner, Minn., and signed by 153 veterans of the Veterans' Hospital, Minneapolis, Minn., requesting that the Minnesota State Medical Association select a committee to visit the veterans' hospitals and interview patients and recommend to proper authorities beneficial changes which would improve the services being rendered veterans at hospital facilities:

NOVEMBER 19, 1945.

MINNESOTA STATE MEDICAL ASSOCIATION.

DEAR SIRS: The information appearing in national publications recently, as well as rumors and observations of patients in the hospital during recent months concerning the care and treatment of veterans in our veterans' hospital, has created doubt in the minds of the veterans here as to how we are being treated and just how such care might be improved.

These disabled veterans in the hospital and their families throughout the State are both interested and disturbed over the present and the future standards of hospital care to be offered the veterans of the State. For this reason we seek assurance from authority that we all recognize and have confidence in to see to it that the medical care provided for by Congress is being made available to the veteran as intended.

Therefore, in order to ascertain the type of medical care and treatment available to the veterans of Minnesota, we, the undersigned, in behalf of all Minnesota veterans and their families appeal to the Minnesota State Medical Association to—

1. Have a committee visit the hospital for the purpose of interviewing both patients and doctors concerning problems of medical care.

2. Recommend to the proper authorities the results of such visits where findings justify such action to assure our medical care to be comparable to the care given in civilian hospitals and sanitariums throughout the State.

3. Have a permanent committee to visit the hospital periodically to interview the patients and to confer with the doctors actually caring for the sick.

We do not make this request in a spirit of criticism or belligerency but rather to promote medical care to the veteran in such a way that his welfare is assured and his family is relieved of unnecessary worry.

We urgently request that our appeal to you be given consideration.

We the undersigned indorse the petition to the Minnesota State Medical Association concerning medical care and treatment of Minnesota veterans by the Veteran's Administration:

R. A. Winter, A. M. Hammer, Francis G. Johnson, Helmer Hammer, William Mindt, Leroy J. Johnston, Frank L.

Dwyer, E. R. Hagstram, Geo. W. Kennelly, Harold Peterson, Adolph Nelson, Peter Odegard, William J. Skelly, Albert E. Hemphill, Pete Mulroney, Virgil S. Kerr, Harry Holtien, A. H. Neumeyer, Chas. McKinney, Joe Stone, Andrew Bovitz, Warren A. Ekeroth, Edward G. Lickteig, Ralph O. Aune, Henry Kimmis, Roman F. Penkert, Andrew J. Glotzmaier, Albert W. Langer, Philip T. Welik, Kenneth C. Way, Ralph O. Young, James E. Gray, Stanley A. Mickel, Samuel Bernard, Carl G. Peterson, Palmer L. Evans, Charles Hay, Joseph A. Johnson, Clement D. Jensen, Mansueto Leonard, A. L. Schoetzon, Clair Carmpion, Walter W. Walrath, Frank A. Tibbetts, C. M. Murphy, Robert Matthew, George M. Goldsburgh, Frank Kobbe, Louis Peron, W. J. Kitterman, R. Nagle, Felipa Coles, Oscar E. Roger Bailey, Thomas W. Reece, H. E. Martinson, Dauwane M. Olsen.

## Value of GM Books to Probers Questioned

EXTENSION OF REMARKS

OF

## HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 21, 1945*

Mr. ANGELL. Mr. Speaker, pursuant to leave heretofore granted, I desire to include in the CONGRESSIONAL RECORD the following article by David Lawrence:

VALUE OF GM BOOKS TO PROBERS QUESTIONED—OBSERVER SAYS LONG STUDY COULD BRING WRONG DECISION ON PAY

(By David Lawrence)

On its face it would seem that if General Motors opened its books to the President's Fact-Finding Commission, someone could figure out whether the corporation might be able to pay a 30-percent increase in wages or a 15-percent or anything else. But is it as simple as that?

Who is going to take the responsibility for analyzing an institution as big as General Motors and deciding in anything less than a year of study whether the management of the corporation is right in its estimate of what it costs to make a car, how many cars will be sold, what the dealer's margins will be, and what factors will influence the total quantity of cars sold—especially competitive factors, such as the models of cars put out by other companies?

It would be difficult for any governmental body to reach any conclusions just by looking into the books. And if it did do so, then may it not be said that the Government is substituting its judgment for that of the management in deciding what ought or ought not to be paid?

RISK LOSING PERIOD

President Truman himself, in his much discussed wage and price message a few weeks ago, conceded that companies might not be able to make profits immediately but intimate that they should raise wages anyway in some instances and take the risks that sales would increase and costs would be met. Indeed, Mr. Truman went so far as to say that if the calculations proved wrong at the end of 6 months, the OPA would sanction requests for price increases.

This is but another way of saying that the Government doesn't know anything about what the future may bring but is willing for industry to engage in a gambling match, and, if the companies lose, they pay the bill for the previous 6 months and get some price increases for the next ensuing period.

Also, if the Government is to determine what wages are to be paid out by a company, by looking at its books, will it not establish a precedent for the reduction of wages the moment the sales fall off? Or would the Government then argue that other items might be cut and other economies might be effected first?

Plainly this process does not mean a free enterprise system at all but the beginnings of a controlled economy such as led both in Italy and Germany in the last decade into government management of business enterprises and finally the elimination of labor unions.

POLITICS WITH ISSUE

Unfortunately, a lot of "bunkum" is being passed back and forth between the Government and the unions and the management. President Truman is losing prestige by playing politics with the issue. One day he issues a statement that seems to help the management side. Then he evens it up with something to help the unions. His own Fact-Finding Commission was sitting judicially trying to solve the problem of how it should approach ability to pay when a reporter's question at a Presidential press conference was answered by Mr. Truman and thus the President decided for the Fact-Finding Commission a question which it presumably was trying to decide for itself.

Then when a reporter told the President the company might not continue in the fact-finding procedure if it was asked to open its books, Mr. Truman, without inquiring into the merits of the problem, promptly condemned the company and said it would be a bad thing for its reputation.

Actually, it would be a bad thing for the Fact-Finding Commission, and for the President, too, to allow the motor strike to be prolonged indefinitely by a statistical study of the books of the General Motors Corp., which company probably would have to bring its financial experts to explain the cost items, its system of pricing, and a thousand and one other details that certainly have little to do with the question of settling a strike.

DECISION FOR MANAGEMENT

Assume that the Fact-Finding Commission, which was not supposed originally to issue opinions or recommendations, decided that General Motors could pay the increase. Would this persuade the General Motors management that the Government's board knew what it was talking about? After all, unless confiscation of business property is to be the program of the future, management must take full responsibility for the decisions as to what it shall pay for labor or anything else

If General Motors can pay the wage increases, does this mean that the Government is going to force the rates of pay for all auto workers up to the same level, and isn't this going to put a crimp into the new companies being formed to compete with General Motors? And who is to say what is a fair profit or an adequate surplus to lay aside for the depressions that may come?

To look at the books isn't half so important as to look inside the minds of management and persuade them that the Government knows more about how to run the motorcar business than do the private managers. When that time comes, America might as well concede that fascism has become the national policy and Government control of everything is on its way.

The situation cries out for mediation and conciliation, and then proper bargaining. Everything else at the moment is irrelevant, including a 6 months' study of a thousand and one ledgers.
